Notice of Intent (NOI) to Adopt a Supplemental Mitigated Negative Declaration

Date	July 5, 2023
To	Office of Planning and Research Alameda County Clerk
Project Title	Quarry Lane School Performing Arts Center
Project Application Number	PLPA-2021-00041
Project Location	The project site is located at 6363 and 6237 Tassajara Road (APN# 985-0072-002-00 and 985-0002-006-03) in the City of Dublin, CA in Alameda County. The proposed project is located just east of Tassajara Road and immediately to the south of the existing Quarry Lane School. The project site is not listed on a hazardous site pursuant to Government Code Section 65962.5.
Project Proponent	Dr. Sabri Arac Quarry Lane School 3750 Boulder Street Pleasanton, CA 94566
Public Review Period	July 5, 2023 to August 4, 2023

Mitigated Negative Declaration

In accordance with the California Environmental Quality Act (CEQA) (Public Resources Code Section 21000 et seq.), the CEQA Guidelines (Title 14 Code of Regulations Section 15000 et seq.), and the Dublin CEQA Guidelines & Procedures, the City as Lead Agency prepared an Initial Study for the above-named project to determine if supplemental environmental review is required for the Project under Public Resources Code Section 21166 and CEQA Guidelines Section 15162. An Environmental Impact Report (EIR) was previously prepared for the Eastern

City of Dublin

NOI to Adopt a Mitigated Negative Declaration for Quarry Lane School Performing Arts Center

Page 2

Dublin General Plan Amendment and Specific Plan (Eastern Dublin EIR, SCH #91103064) certified in 1993 (Eastern Dublin EIR).

Based on the Initial Study, the project would not have a significant effect on the environment. Largely, the environmental impacts associated with the proposed project would be the same as or similar to those identified in the EDSP EIR and mitigated to less-than-significant levels with implementation of the mitigation measures identified in the EDSP EIR. New impacts were identified in the following environmental areas: air quality and noise. None of these impacts would result in significant effects that cannot be mitigated to less-than-significant levels with implementation of project-specific mitigation measures identified in the attached Initial Study. Therefore, the City has determined that the proposed project requires a Supplemental Mitigated Negative Declaration, in compliance with PRC Section 21166 and CEQA Guidelines Section 15163.

Project Description

The proposed project is to construct a performing arts center on the southern portion of an approximately 12-acre property that currently contains the existing private K-12 Quarry Lane School and an existing single-family home. The proposed project would consist of a new 13,800-square-foot building with a 350-seat auditorium, three classrooms, and other support spaces and approximately 126 additional parking spaces. The proposed project would be constructed within the newly acquired southern portion of the school property, which was formerly used as a landscaping supply business and currently contains a single-family home and associated outbuildings. These existing structures would be demolished to accommodate development of the proposed project.

The proposed project would provide a dedicated space for the existing performing arts program and the project would not increase the total student enrollment or include an expansion of existing school operations. The proposed building would include a performance hall with seating for up to 350 people, along with drama, music, dance, and rehearsal studios for current Quarry Lane School students. The new facility would provide space to host the school's existing performance art shows and events, as well as an improved space for high school commencement ceremonies.

Public Review and Comment

The Supplemental Mitigated Negative Declaration, including its supporting Initial Study, is being circulated for public review and comment. Copies of the Supplemental Mitigated Negative Declaration, the Initial Study, and all documents referenced in the Supplemental Mitigated Negative Declaration are available for review at the contact address above during normal business hours or on the City of Dublin website at www.dublin.ca.gov/dev.

Please submit any comments you have on the attached Mitigated Negative Declaration to the contact address above, **no later than 5:00 pm on August 4, 2023**. The Mitigated Negative

City of Dublin

Quarry Lane School Performing Arts Center

Supplemental Mitigated Negative Declaration

June 30, 2023

Project Overview

This Initial Study has been prepared in accordance with the provisions of the California Environmental Quality Act (CEQA) and assesses the potential environmental impacts of implementing the proposed project described below. The Initial Study consists of a completed environmental checklist and a brief explanation of the environmental topics addressed in the checklist.

Because the proposed project is within the Eastern Dublin Specific Plan (EDSP or Eastern Dublin EIR) area and is generally based on the land use designation established by the City of Dublin General Plan for the subject property, this Initial Study relies on a Program Environmental Impact Report (EIR) prepared for the Eastern Dublin General Plan Amendment (Eastern Extended Planning Area) and EDSP (Eastern Dublin EIR),¹ which evaluated development of over 3,300 acres in the eastern part of the City. The Eastern Dublin EIR was certified by the City in 1993.

The subject of this Initial Study is the Quarry Lane School Performing Arts Center project, which includes development of a performing arts building and associated surface parking on 2.64 acres located just south of the existing Quarry Lane School at 6363 and 6237 Tassajara Road in eastern Dublin.

Prior CEQA Analysis

The project is located in eastern Dublin within the EDSP area; therefore, the Eastern Dublin EIR and associated addenda are applicable to the proposed project. This environmental document is described below.

[Eastern Dublin General Plan Amendment and Eastern Dublin Specific Plan Program EIR \(State Clearinghouse No. 1991103064\)](#). A Program EIR for the Eastern Dublin General Plan Amendment (Eastern Extended Planning Area) and the EDSP was certified by the City Council in 1993 by Resolution No. 51-93. This document and its related addenda collectively are referred

to as the Eastern Dublin EIR. The Eastern Dublin EIR evaluated the impacts on the following environmental topical areas:

- Land Use
- Population, Employment and Housing
- Traffic and Circulation
- Community Services and Facilities
- Sewer, Water and Storm Drainage
- Soils, Geology and Seismicity
- Biological Resources
- Visual Resources
- Cultural Resources
- Noise
- Air Quality
- Fiscal Considerations

The following significant and unavoidable impacts were identified:

- Cumulative loss of agriculture and open space land
- Cumulative traffic
- Extension of certain community facilities (natural gas, electric and telephone service)
- Consumption of non-renewable natural resources
- Increases in energy uses through increased water treatment and disposal and through operation of the water distribution system
- Inducement of substantial growth and concentration of population
- Earthquake ground shaking
- Loss or degradation of botanically sensitive habitat
- Regional air quality
- Noise
- Alteration of visual character

The City adopted a Mitigation Monitoring Plan, which specifies mitigation measures and a monitoring plan that continue to apply to development in eastern Dublin. The City Council also adopted a Statement of Overriding Considerations (Resolution No. 53–93) in connection with certification of the Eastern Dublin EIR.

Two addenda to the Eastern Dublin EIR were subsequently approved by the City. The first Addendum² addressed a modification to Alternative 2 identified in the Eastern Dublin EIR showing land beyond the Sphere of Influence designated as “Future Study Area” and providing a total of approximately 14,000 dwelling units and approximately 10.9 million square feet of commercial development on 4,200 acres. The second Addendum³ provided updated information related to the plans of the City and the Dublin San Ramon Services District (DSRSD) to provide sewer service to Eastern Dublin.

Proposed CEQA Analysis in this Document

The proposed project is generally based on the land use designations established by the City of Dublin General Plan and EDSP. This Initial Study relies on the EDSP EIR, which evaluated the development of over 3,300 acres in the eastern part of the City.

Pursuant to the requirements of CEQA, the City must evaluate the potential for construction or operation of the proposed project to create adverse environmental effects. The City prepared a CEQA analysis using the City’s Initial Study Checklist, dated June 30, 2023, incorporated herein by reference, to assess whether any further environmental review is required for the proposed project. This Supplemental Initial Study/Mitigated Negative Declaration (IS/MND) has been prepared for the proposed project pursuant to the rules for supplemental environmental review under Public Resources Code (PRC) Section 21166 and *State CEQA Guidelines* Section 15163. This Initial Study analyzes whether proposed changes to the Eastern Dublin Specific Plan, as represented by the proposed project, would result in any new or substantially more severe significant environmental impacts than those analyzed in the prior CEQA documents or whether any of the other standards requiring further environmental review under CEQA are met.

Based on the attached Initial Study, the proposed project would not have a significant effect on the environment. For the most part, the environmental impacts associated with the proposed project would be the same as or similar to those identified in the EDSP EIR and mitigated to less-than-significant levels with implementation of the mitigation measures identified in the EDSP EIR. New impacts were identified in the following environmental areas: air quality, and noise. None of these impacts would result in significant effects that cannot be mitigated to less-than-significant levels with implementation of project-specific mitigation measures identified in the attached Initial Study. Therefore, the City has determined that the proposed project requires a Supplemental Mitigated Negative Declaration, in compliance with PRC Section 21166 and CEQA Guidelines Section 15163.

Project Description

Project Background

Opened in 1991, the Quarry Lane School (East Dublin campus) offers education for elementary through high school (K-12) students with an approved total student enrollment capacity of 950 students. The existing school facility, located at 6363 Tassajara Road, includes four buildings as follows:

- Building 1 (7,611 square feet) includes the school admissions office, multi-purpose room, and elementary school library.
- Building 2 (15,578 square feet) includes the elementary school classrooms.
- Building 3 (70,701 square feet) includes the middle and high school classrooms and laboratories, library, and gymnasium.
- Building 4 (13,003 square feet) includes the engineering/science and technology classrooms and laboratories, dining hall, and lecture hall.

In 2020, Quarry Lane School purchased the property immediately to the south with the intent to develop a dedicated space for the existing performing arts program and associated parking.

Prior Environmental Review

The project is located in eastern Dublin within the Eastern Dublin Specific Plan (EDSP) area; therefore, the Eastern Dublin EIR and associated addenda are applicable to the proposed project. This environmental document is described below.

[Eastern Dublin General Plan Amendment and Eastern Dublin Specific Plan Program EIR \(State Clearinghouse No. 1991103064\)](#). A Program EIR for the Eastern Dublin General Plan Amendment (Eastern Extended Planning Area) and the EDSP was certified by the City Council in 1993 by Resolution No. 51-93. This document and its related addenda collectively are referred to as the Eastern Dublin EIR. The Eastern Dublin EIR evaluated the impacts on the following environmental topical areas:

- Land Use
- Population, Employment and Housing
- Traffic and Circulation
- Community Services and Facilities

- Sewer, Water and Storm Drainage
- Soils, Geology and Seismicity
- Biological Resources
- Visual Resources
- Cultural Resources
- Noise
- Air Quality
- Fiscal Considerations

The following significant and unavoidable impacts were identified:

- Cumulative loss of agriculture and open space land
- Cumulative traffic
- Extension of certain community facilities (natural gas, electric and telephone service)
- Consumption of non-renewable natural resources
- Increases in energy uses through increased water treatment and disposal and through operation of the water distribution system
- Inducement of substantial growth and concentration of population
- Earthquake ground shaking
- Loss or degradation of botanically sensitive habitat
- Regional air quality
- Noise
- Alteration of visual character

The City adopted a Mitigation Monitoring Plan, which specifies mitigation measures and a monitoring plan that continue to apply to development in eastern Dublin. The City Council also adopted a Statement of Overriding Considerations (Resolution No. 53–93) in connection with certification of the Eastern Dublin EIR.

Two addenda to the Eastern Dublin EIR were subsequently approved by the City. The first Addendum⁵ addressed a modification to Alternative 2 identified in the Eastern Dublin EIR showing land beyond the Sphere of Influence designated as “Future Study Area” and providing a total of approximately 14,000 dwelling units and approximately 10.9 million square feet of

⁵ Dublin, City of. 1993. Addendum to Eastern Dublin General Plan Amendment and Specific Plan Environmental Impact Report. May 4.

commercial development on 4,200 acres. The second Addendum⁶ provided updated information related to the plans of the City and the Dublin San Ramon Services District (DSRSD) to provide sewer service to Eastern Dublin.

Proposed Project

The City of Dublin is considering an application to construct a performing arts center on the southern portion of an approximately 12-acre property that currently contains the existing private K-12 Quarry Lane School and an existing single-family home. The proposed project would consist of a new 13,800-square-foot building with a 350-seat auditorium, three classrooms, and other support spaces and approximately 126 additional parking spaces. The proposed project would be constructed within the newly acquired southern portion of the school property, which was formerly used as a landscaping supply business and currently contains a single-family home and associated outbuildings. These existing structures would be demolished to accommodate development of the proposed project. Figure 3 shows the overall site plan. Figure 4 shows the expansion site plan, which includes details of the proposed performing arts center.

The proposed project would provide a dedicated space for the existing performing arts program but would not include any increase in total student enrollment or an expansion of existing school operations. The proposed building would include a performance hall with seating for up to 350 people, along with drama, music, dance, and rehearsal studios for current Quarry Lane School students. The new facility would provide space to host the school's existing performance art shows and events, as well as an improved space for high school commencement ceremonies. Currently, the school hosts approximately eight events annually, including the high school graduation ceremony. These events occur in the evenings and on weekends.

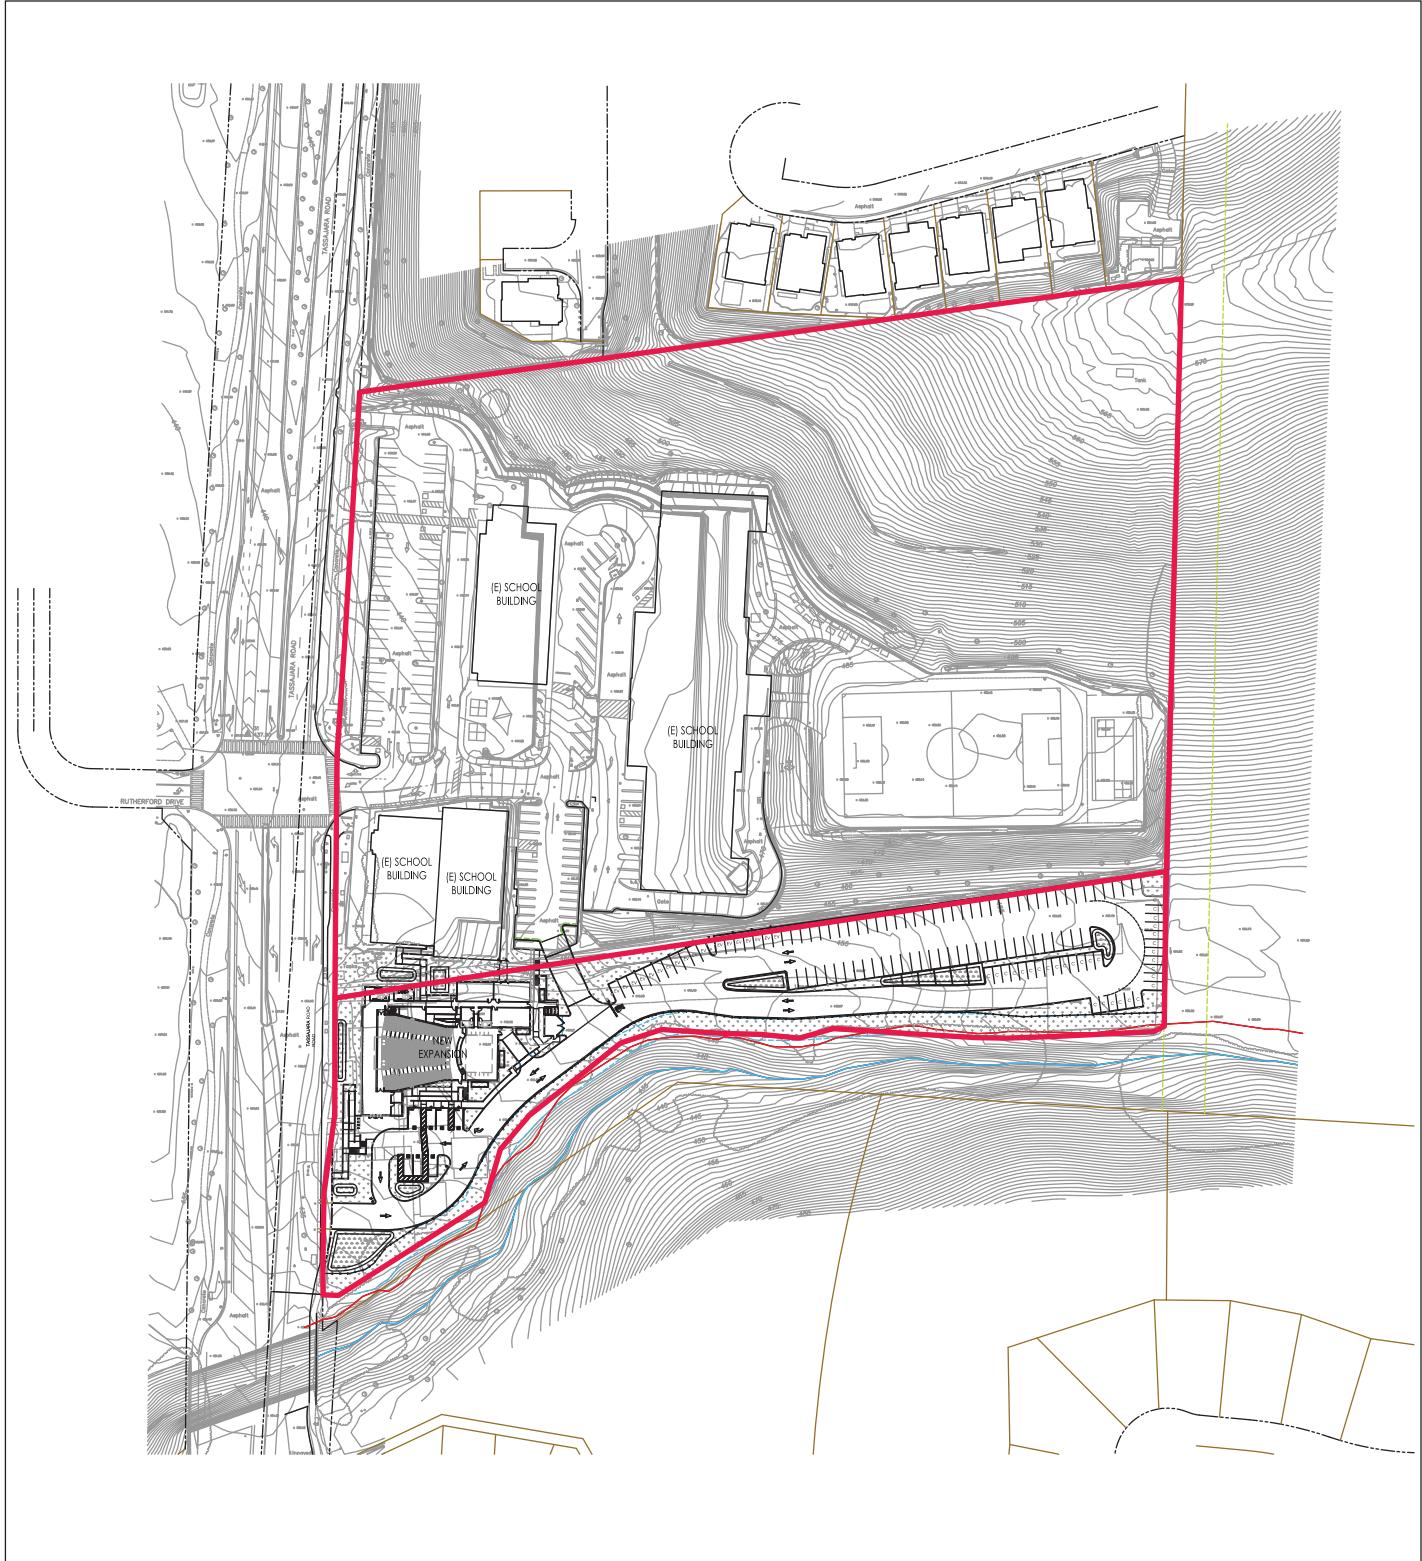

Implementation of the proposed project would not change the frequency or capacity of such events but would provide a new modernized and dedicated facility in which to host these events.

Access, Circulation, and Parking

New vehicular access is proposed from Tassajara Road via a right-in only driveway at the southern end of the project site with a connection to the existing school parking lot to the north, which has a signalized entry and exit on Tassajara Road. The proposed additional parking area, consisting of 126 spaces, would be located east and south of the proposed performing arts center.

To accommodate existing parking demand on campus, the school has a student parking policy, which limits the total number of student parking permits to approximately 30 percent of the existing total parking spaces. Student and staff parking would not change with implementation

⁶ Dublin, City of. 1994. Addendum to the Eastern Dublin General Plan Amendment/Specific Plan Environmental Impact Report, Update of Plans to Provide Sewer Service. August 22.

*Performing Arts Center at Quarry Lane School
Expansion Site Plan*

FIGURE 4

of the proposed project. Inbound traffic would have a dedicated right lane entering the parking lot. This access would be used for inbound entry only. Students, staff, and visitors would continue to exit the site via the existing signalized entry on Tassajara Road. The school uses a staggered system for morning arrival and afternoon dismissal times for different grade levels to facilitate traffic operations in the morning and afternoon.

Paved pedestrian walkways would be provided to connect the parking area with the proposed performing arts center, as well as to provide pedestrian connections to proposed sidewalks along Tassajara Road.

Safety and security lighting would be provided along pedestrian pathways, around the new building and in the parking area. Drive aisle and parking area lighting would consist of 15-foot-high, pole-mounted LED lights. Lighting for pedestrian pathways would consist of 3-foot-high bollards.

Landscaping

A landscape buffer would be provided along Tassajara Road with trees and shrubs, including coast live oak (*Quercus agrifolia*), glossy abelia (*Abelia g. "Edward Goucher"*), Point Reyes creeper (*Ceanothus gloriosus*), and desert carpet (*Acacia redolens*). Existing street trees on Tassajara Road would be retained. Landscape plantings, including a variety of trees, shrubs, flowering perennials, and grasses would be provided around the building and in the parking lot. In addition, the proposed project would include several landscaped stormwater basins, as further described below, totaling approximately 3,460 square feet. Stormwater basins would include Berkeley sedge (*Carex divulsa*), blue rush (*Juncus patens*), and blue wild rye (*Elymus glaucus*). A three-inch layer of wood mulch would be provided between the new right-in only driveway to the proposed parking area and an existing riparian area associated with an unnamed tributary that borders the project site to the south. A rail fence would be provided along the edge of a City-required creek setback to prevent intrusion into the riparian area.

Utilities and Infrastructure

The project site is currently served by existing utilities. Proposed utility connections are discussed below.

Water. Water service is provided by the Dublin San Ramon Services District (DSRSD). The proposed project would include the installation of new water lines on the site that would connect to the existing water main within Tassajara Road. Proposed water lines would include eight-inch water lines for fire suppression and four-inch water lines for domestic water use.

Wastewater. Wastewater service is provided by DSRSD. New four-inch sanitary sewer lines would be installed within the project site and would tie into the existing sanitary sewer main within Tassajara Road.

Stormwater. The project site is currently largely undeveloped and, therefore, contains minimal impervious surfaces. Upon construction of the proposed project, approximately 70 percent of the project site would be covered with impervious surfaces, and the remaining 30 percent

would be covered by pervious surfaces, consisting of landscaped and stormwater retention areas. The proposed project would include approximately 3,460 square feet of bioretention area on the project site that would be used for stormwater quality control. The proposed project would include approximately 18 bioretention basins and storm drains throughout the project site, which would connect to the existing stormdrain pipeline in Tassajara Road. Proposed storm drainage facilities would conform with the Alameda County C.3 Stormwater Technical guidelines and requirements.

Electricity and Gas. Electricity service is provided to the project site by the Pacific Gas & Electric Company (PG&E). The proposed project would include connections to proposed electrical lines within Tassajara Road. In Dublin, no new natural gas service is permitted beginning in January 2023, therefore, new natural gas connections would not be required.

Demolition, Grading and Construction

Excavation for the proposed project would require approximately 3,150 cubic yards of cut and 375 cubic yards of fill, resulting in approximately 2,775 cubic yards of material that would need to be off hauled from the project site. In addition, the proposed project would require demolition of the existing residence and associated outbuildings, resulting in approximately 6,200 square feet of material that would be removed from the project site. It is anticipated that the maximum depth of excavation for building pads would be approximately three feet and the maximum depth of utility trenching would be approximately five feet.

If approved, construction of the proposed project is anticipated to begin in fall of 2023 and be completed by fall of 2024. However, no vertical combustion construction can commence until the Tassajara Road Street Improvements Project⁷ being conducted by the City of Dublin Department of Public Works is completed.

Project Entitlements

The City is the CEQA Lead Agency for the proposed project and will consider the environmental impacts of the proposed project as part of the project approval. The proposed project includes a minor amendment to the Stage 1 and Stage 2 Development Plan adopted by City Council in May 2014 for the Quarry Lane School (Ordinance No. 12-14). Pursuant to Dublin Municipal Code Section 8.32.080, the Planning Commission by means of a Conditional Use Permit may approve minor amendments to an adopted Development Plan upon a finding that the amendment substantially complies with and does not materially change the provisions or intent of the adopted Planned Development Zoning District Ordinance for the site. Thus, permits and approvals required for the proposed project include a Conditional Use Permit and Site Development Review Permit. Ministerial actions would be required for implementation of the

⁷ The Tassajara Road Street Improvements project provides for design and construction of street improvements on Tassajara Road, between North Dublin Ranch Drive and Quarry Lane School. The project will widen Tassajara Road to a four-lane arterial standard, with bike lanes, sidewalks, landscaped median, stormwater treatment areas, and other associated street improvements.

project including issuance/approval of grading permits, encroachment permits, improvement plans, and building permits.

Public Agencies Whose Approval is Required (e.g., permits, financial approval, or participation agreements):

- State Water Resources Control Board (SWRCB) – National Pollutant Discharge Elimination System (NPDES) General Permit for Industrial and Construction Stormwater Discharges and Stormwater Pollution Prevention Plan (SWPPP) approval

Tribal Consultation

In March 2022, the City provided formal notification to the California Native American tribe that has requested notification under Assembly Bill 52. No response was received and no formal tribal consultation was requested.

Environmental Setting

Project Site and Existing Facilities

The site contains native and introduced tree and other vegetation species, as further described in Section 4, Biological Resources of this Initial Study. The site has historically been used as a landscape contracting business with outdoor storage and contains one single-family home and associated outbuildings. Building materials and similar equipment are currently stored on the site. The project site has a gradual slope to the south toward an unnamed tributary. A six-foot chain link fence with a four-foot-tall sheet metal barrier at the base has been installed along the southern property line to provide a wildlife barrier between the project site and adjacent tributary.

Surrounding land uses include Quarry Lane School to the north. To the east of the project site are open space lands that are part of the Northern Drainage Conservation Area (NDCA). Immediately south of the project site is the unnamed tributary of Tassajara Creek. Single-family residential development and undeveloped open space are located further to the south. Tassajara Road is located immediately to the west of the project site.

The project site is located immediately north of the unnamed tributary of Tassajara Creek, a major regional watercourse located west of the project site. The tributary was previously part of the project site but was subsequently parceled off to be restored and incorporated into a 245-acre permanent conservation easement with open space lands to the east. The restoration of the creek and the open space lands serve as mitigation for development allowed on portions of the nearby Dublin Ranch development. This mitigation was required by the Regional Water Quality Control Board (RWQCB). Today, the tributary is a separate parcel owned and managed by the Center for Natural Lands Management and is not part of the project site. The tributary is maintained in a natural open space area and provides suitable habitat for several special-status wildlife species. The tributary has been dedicated as a permanent conservation area and is

managed accordingly. No development is proposed within or immediately adjacent to the tributary.

Environmental Checklist

Environmental Factors Potentially Affected by the Project

The environmental factors checked below would be potentially affected by this project, involving at least one impact that is a "Potentially Significant Impact" or "Less than Significant with Mitigation Incorporated" as indicated by the checklist on the following pages.

	Aesthetics		Agricultural and Forestry Resources	X	Air Quality
	Biological Resources		Cultural Resources		Energy
	Geology / Soils		Greenhouse Gas Emissions		Hazards & Hazardous Materials
	Hydrology / Water Quality		Land Use / Planning		Mineral Resources
X	Noise		Population / Housing		Public Services
	Recreation		Transportation / Traffic		Tribal Cultural Resources
	Utilities / Service Systems		Wildfire	X	Mandatory Findings of Significance

Instructions

1. A brief explanation is required for all answers except "No Impact" answers that are adequately supported by the information sources a lead agency cites in the parentheses following each question (see Source List, attached). A "No Impact" answer is adequately supported if the referenced information sources show that the impact simply does not apply to projects like the one involved (e.g., the project falls outside a fault rupture zone). A "No Impact" answer should be explained where it is based on project-specific factors as well as general standards (e.g., the project will not expose sensitive receptors to pollutants, based on a project-specific screening analysis).
2. All answers must take account of the whole action involved, including off-site as well as on-site, cumulative as well as project-level, indirect as well as direct, and construction as well as operational impacts.
3. Once the lead agency has determined that a particular physical impact may occur, then the checklist answers must indicate whether the impact is potentially significant, less than significant with mitigation, or less than significant. "Potentially Significant Impact" is appropriate if there is substantial evidence that any effect may

- be significant. If there are one or more "Potentially Significant Impact" entries when the determination is made, an EIR is required.
4. "Negative Declaration: Less Than Significant With Mitigation Incorporated: applies where incorporation of mitigation measures has reduced an effect from "Potentially Significant Impact" to a "Less Than Significant Impact." The lead agency must describe the mitigation measures, and briefly explain how they reduce the effect to a less than significant level.
 5. Earlier Analysis may be used where, pursuant to the tiering, program EIR, or other CEQA process, one or more effects have been adequately analyzed in an earlier EIR or negative declaration. Section 15063(c)(3)(D). In this case a discussion should identify the following on attached sheets:
 - a. Earlier analysis used. Identify earlier analyses and state where they are available for review.
 - b. Impacts adequately addressed. Identify which effects from the above checklist were within the scope of and adequately analyzed in an earlier document pursuant to applicable legal standards, and state whether such effects were addressed by mitigation measures based on the earlier analysis.
 - c. Mitigation measures. For effects that are "Less than Significant with Mitigation Incorporated," describe the mitigation measures, which were incorporated or refined from the earlier document and the extent to which they address site-specific conditions for the project.
 6. Lead agencies are encouraged to incorporate into the checklist references to information sources for potential impacts (e.g., general plans, zoning ordinances). Reference to a previously prepared or outside document should, where appropriate, include a reference to the page or pages where the statement is substantiated.
 7. Supporting Information Sources: A source list should be attached, and other sources used or individuals contacted should be cited in the discussion.
 8. This is only a suggested form, and lead agencies are free to use different formats; however, lead agencies should normally address the questions from this checklist that are relevant to a project's environmental effects in whatever format is selected.
 9. The explanation of each issue should identify:
 - o the significance criteria or threshold, if any, used to evaluate each question; and
 - o the mitigation measure identified, if any, to reduce the impact to less than significance
 10. Have California Native American tribes traditionally and culturally affiliated with the project area requested consultation pursuant to Public Resources Code section

21080.3.1? If so, has consultation begun?

Note: Conducting consultation early in the CEQA process allows tribal governments, lead agencies, and project proponents to discuss the level of environmental review, identify and address potential adverse impacts to tribal cultural resources, and reduce the potential for delay and conflict in the environmental review process. (See Public Resources Code section 21083.3.2.) Information may also be available from the California Native American Heritage Commission's Sacred Lands File per Public Resources Code section 5097.96 and the California Historical Resources Information System administered by the California Office of Historic Preservation. Please also note that Public Resources Code section 21082.3(c) contains provisions specific to confidentiality.

Determination

On the basis of this initial evaluation:

I find that the proposed project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.	
I find that although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because revisions in the project have been made by or agreed to by the project proponent. A SUPPLEMENTAL MITIGATED NEGATIVE DECLARATION will be prepared.	X
I find that the proposed project MAY have a significant effect on the environment and an ENVIRONMENTAL IMPACT REPORT is required.	
I find that the proposed project MAY have a potentially significant or a potentially significant unless mitigated impact on the environment, but at least one effect (1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and (2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.	
I find that although the proposed project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier EIR or NEGATIVE DECLARATION pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier EIR or NEGATIVE DECLARATION, including revisions or mitigation measures that are imposed upon the proposed project, nothing further is required.	

CITY OF DUBLIN

Date

Explanation of Environmental Checklist Responses

Aesthetics

ENVIRONMENTAL IMPACTS Issues	Potentially Significant Issues	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No New Impact
1. AESTHETICS. Would the project:				
a) Have a substantial adverse effect on a scenic vista?				X
b) Substantially damage scenic resources, including but not limited to trees, rock outcroppings, and historic buildings within a state scenic highway?				X
c) Substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality				X
d) Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?			X	

Environmental Setting

The proposed project is located in eastern Dublin within the EDSP area. The project site is located just east of Tassajara Road and immediately to the south of the existing Quarry Lane School. The site has historically been used as landscape contracting business with outdoor storage and contains one single-family home and associated outbuildings. Building materials and similar equipment are currently stored on the site. Ruderal (weedy) vegetation is located in the middle and eastern half of the site.

The project site is located immediately north of the unnamed tributary of Tassajara Creek, a major regional watercourse located west of the project site. The tributary was previously part of the project site but was subsequently parceled off to be restored and incorporated into a 245-acre permanent conservation easement with open space lands to the east. The tributary is maintained in a natural open space area and provides suitable habitat for several special-status wildlife species. The tributary has been dedicated as a permanent conservation area and is managed accordingly.

The project site has a gradual slope to the south toward the unnamed tributary. A six-foot chain link fence with a four-foot-tall sheet metal barrier at the base has been installed along the

southern property line to provide a wildlife barrier between the project site and adjacent tributary.

No designated State scenic highways are visible from the project site. I-580, located 1.7 miles south of the project site, is an eligible State scenic highway and a designated Alameda County scenic route. I-680, located 3.5 miles west of the project site is an officially designated State scenic highway; however, due to the distance from the site and intervening development, there are no views to the project site from I-680. Tassajara Road, which borders the site to the east, is designated as a scenic route by Alameda County.

The site is located in a developed area. Streetlights, vehicle head and taillights on area roadways, and lighting associated with adjacent development are the existing sources of light and glare in the project area.

Previous CEQA Documents

Eastern Dublin EIR

The Eastern Dublin EIR identified potentially significant impacts related to standardized tract development, obscuring distinctive natural features, alteration of hillsides, ridges, and watercourses, alteration of Dublin's visual identity as a freestanding city, scenic vistas, and scenic routes. All of these impacts were determined to be less than significant with implementation of mitigation measures identified in the Eastern Dublin EIR. The Eastern Dublin EIR determined that impacts associated with the alteration of the rural/open space visual character of the project area and alteration of the visual character of the flatlands would be significant and unavoidable. Thus, a Statement of Overriding Considerations was adopted. The following mitigation measures would apply to the proposed project:

MM 3.8/1.0 Establish a visually distinctive community which preserves the character of the natural landscape by protecting key visual elements and maintaining views from major travel corridors and public spaces.

MM 3.8/2.0 Implement the land use plan for the Project site which emphasizes retention of the predominant natural features, such as ridgelines and watercourses, and sense of openness that characterize eastern Dublin.

MM 3.8/3.0 Preserve the natural open beauty of the hills and other important visual resources, such as creeks and major stands of vegetation.

MM 3.8/4.0 Visual impacts of extensive grading shall be reduced by sensitive engineering design, by using gradual transition from graded areas to natural slopes and by revegetation.

MM 3.8/4.1 Alterations of existing natural contours shall be minimized. Grading shall maintain the natural topography as much as possible. Grading beyond actual development areas shall be for remedial purposes only.

MM 3.8/4.4 Graded slopes shall be re-contoured to resemble existing landforms in the immediate area. Cut and graded slopes shall be revegetated with native vegetation suitable to hillside environments.

MM 3.8/4.5 The height of cut and fill slopes shall be minimized to the greatest degree possible. Grades for cut and fill slopes should be 3:1 or less whenever feasible.

MM 3.8/5.1 Structures shall not be located where they would obstruct scenic views or appear to extend above an identified scenic ridgeline (i.e., silhouetted) when viewed from designated scenic routes.

MM 3.8/6.0 Tassajara Creek and other stream corridors are visual features that have special scenic value for the planning area. The visual character of these corridors should be protected from unnecessary alteration or disturbance and adjoining development should be sites to maintain visual access to the stream corridors.

MM 3.8/7.0 Preserve views of designated open space areas.

MM 3.8/8.1 The City should require that projects with potential impacts on scenic corridors to submit a detailed visual analysis with development project application. Applicants will be required to submit graphic simulations and/or section drawn from affected travel corridors through the parcel in question, representing typical views of the parcel from scenic routes. The graphic depiction of the location and massing of the structure and associated landscaping can then be used to adjust the project design to minimize the visual impacts.

Project Impacts and Mitigation Measures

(a) Scenic vistas, views

No New Impact. A scenic vista is defined as a viewpoint that provides expansive views of a highly valued landscape for the benefit of the general public. Aesthetic components of a scenic vista generally include: 1) scenic quality; 2) sensitivity level; and 3) view access. According to the EDSP, views within the planning area are dominated by rolling hills; long-range views of scenic vistas are available from the flatlands near I-580 and higher elevations. Due to topographic conditions and residential development, scenic vistas from the surrounding hillsides to the east and west are obscured offering limited views from the project site.

The proposed project would result in the development of a dedicated space for the existing Performing Arts program for Quarry Lane School, with associated parking. Visible elements of the proposed project would include the new auditorium, a new vehicular access point and parking area, metal fencing, landscaping, and lighting. The most evident new features within the viewshed would be the auditorium measuring approximately 30 feet high, at the highest point, which is consistent with the maximum height limits established by the City.

The Eastern Dublin EIR contains Figure 3.8-H, Visually Sensitive Ridgelands, depicting portions of the Eastern Dublin area that contains ridges and ridgelands which are considered to be visually sensitive. As identified in the Eastern Dublin EIR, the hillside areas located to the east of the project site are designated as “Visually Sensitive Ridgelands-restricted development.” As described above, the Eastern Dublin EIR determined that development associated with implementation of the EDSP would alter the character of existing scenic vistas and obscure important sightlines. These impacts were determined to be less than significant with implementation of mitigation measures identified in the Eastern Dublin EIR and listed above.

Although the proposed project would be visible from public vantage points, including Tassajara Road, it would not impede views from Tassajara Road to the scenic ridgelines to the east, which are already obscured by existing development and roadway infrastructure. The mass and scale of proposed facilities would be consistent with the existing school facility to the north and site topography, so as not to obstruct or impair scenic vistas of the ridgelines and hillsides in the project area. Landscaping along Tassajara Road would provide further screening of proposed built features. Consistent with Mitigation Measure 3.8/5.0, identified in the Eastern Dublin EIR, the proposed project would be required to undergo site-specific design review to ensure the project is consistent with City of Dublin design standards, property development regulations and performance standards related to aesthetics and to lessen the severity of visual changes resulting from the proposed project. Further, the proposed project would be required to implement other Mitigation Measures (MM 3.8/3.0, MM 3.8/4.0, MM 3.8/4.1, MM 3.8/4.4, MM 3.8/4.5, MM 3.8/5.1) identified in the Eastern Dublin EIR, which include design features to minimize visual impacts (e.g., sensitive grading, sensitive engineering design, revegetation).

Therefore, the project does not propose substantial changes affecting scenic vistas that were not previously analyzed in the Eastern Dublin EIR that would require major changes to the Eastern Dublin EIR. Based on the information in the Eastern Dublin EIR and this environmental analysis, the project would not substantially increase the severity of the previously identified impacts to scenic vistas/views, nor result in new significant impacts.

With adherence to applicable regulatory requirements and mitigation measures identified in the Eastern Dublin EIR there would be no new or substantially more severe significant impacts to scenic vistas/views beyond what has been analyzed in the previous Eastern Dublin EIR, and no other CEQA standards for supplemental review are met. Therefore, no further environmental review is required.

(b) Scenic resources

No New Impact. As described above, no designated State scenic highways are located near the project site. The nearest eligible State scenic highway to the project area is I-580, which is approximately 1.7 miles south of the project site. However, Tassajara Road, which borders the site to the east, is designated as a scenic route by Alameda County.

The Eastern Dublin EIR determined that implementation of the EDSP has the potential to alter visual resources along scenic routes, including Tassajara Road (Impact 3.8/J). With

implementation of Mitigation Measures 3.8/8.0 and 8.1 which require the City to adopt scenic corridor policies and review procedures for projects within the scenic corridor viewshed and to require a detailed visual analysis for projects with potential impacts on scenic corridors, this impact was determined to be less than significant.

No substantial damage to scenic resources within a scenic corridor would occur as a result of implementation of the proposed project. Proposed improvements would include demolition of the existing structures on the site and development of a new performing arts center, entry, surface parking, and associated landscaping and safety lighting. The proposed project would not impact historic structures, or rock outcroppings, as these resources are not present on the project site. The proposed project would maintain the existing stream setback established for the tributary that borders the site to the south and would preserve existing trees within the setback area. In addition, new landscaping, including tree planting, is proposed along Tassajara Road and within the project site. Further, the mitigation measures identified in the Eastern Dublin EIR and the visual policies in the EDSP would apply to the proposed project and the proposed project would be required to undergo site-specific design review to ensure the project is consistent with City of Dublin design standards.

Therefore, the project does not propose substantial changes affecting scenic resources that were not previously analyzed in the Eastern Dublin EIR that would require major changes to the Eastern Dublin EIR. Based on the information in the Eastern Dublin EIR and this environmental analysis, the project would not substantially increase the severity of the previously identified impacts to scenic resources, nor result in new significant impacts.

With adherence to applicable regulatory requirements and mitigation measures identified in the Eastern Dublin EIR there would be no new or substantially more severe significant impacts to scenic resources beyond what has been analyzed in the previous Eastern Dublin EIR, and no other CEQA standards for supplemental review are met. Therefore, no further environmental review is required..

(c) Substantially degrade the visual character of public views of the site or surrounding area

No New Impact. Implementation of the proposed project would result in the demolition of the existing structures on the project site and redevelopment of the site with a performing arts center and associated improvements (e.g., parking, landscaping, and lighting). The proposed project has been designed to be similar to and consistent with the existing Quarry Lane School facility. Landscaping would be provided along Tassajara Road and throughout the proposed parking area to provide additional visual screening from public vantage points. In addition, the proposed project would preserve existing visual features on the project site, including the riparian area associated with the unnamed tributary and provide new visual elements (e.g., entries, landscaping) to enhance and complement project improvements.

As described above, the Eastern Dublin EIR determined that visual impacts associated with the alteration of the rural/open space character of the project area and alteration of the visual character of the flatlands would be significant and unavoidable and therefore a Statement of

Overriding Considerations was adopted for the project. Other impacts to visual resources, including impacts to distinctive natural features, scenic vistas, and scenic routes, and alteration of hillsides, ridges, and watercourses were determined to be less than significant with implementation of mitigation measures identified in the Eastern Dublin EIR.

Consistent with the findings of the Eastern Dublin EIR, the proposed project would alter the visual character of the project site, which would be converted from residential/commercial development to public use/school. However, the mass and architectural style of the proposed project would be consistent with the visual character of the immediately adjacent existing school facility. In addition, existing vegetation associated with the unnamed tributary, which defines the site's southern boundary would be preserved and new landscaping, including tree planting, is proposed along Tassajara Road and within the project site, which would enhance the visual quality of the project site. The mitigation measures identified in the Eastern Dublin EIR and the visual policies in the City of Dublin General Plan would apply to the proposed project. In addition, the proposed project would be required to undergo site-specific design review to ensure the project is consistent with City of Dublin design standards, property development regulations and performance standards related to aesthetics and to lessen the severity of visual changes resulting from the proposed project. These existing requirements would include review of the physical improvements to the project site, including the overall building scale, massing, and design to ensure compatibility and compliance with City requirements governing scenic quality.

Therefore, the project does not propose substantial changes affecting visual character that were not previously analyzed in the Eastern Dublin EIR that would require major changes to the Eastern Dublin EIR. Based on the information in the Eastern Dublin EIR and this environmental analysis, the project would not substantially increase the severity of the previously identified impacts to visual character, nor result in new significant impacts.

With adherence to applicable regulatory requirements (e.g., design review) and mitigation measures identified in the Eastern Dublin EIR, there would be no new or substantially more severe significant impacts to visual character beyond what has been analyzed in the previous Eastern Dublin EIR, and no other CEQA standards for supplemental review are met. Therefore, no further environmental review is required.

(d) Create a new source of substantial light or glare

Less Than Significant Impact. Streetlights, vehicle head and taillights on area roadways, and lighting associated with adjacent development are the existing sources of light and glare in the vicinity of the project site. The proposed project would include demolition of the existing structures on the project site and development of a new auditorium with associated parking, landscaping and other improvements. Safety and security lighting would be provided along pedestrian pathways, around the building and in the parking area. Drive aisle and parking area lighting would consist of 15-foot-high, pole-mounted LED lights. Lighting for pedestrian pathways would consist of 3-foot-high bollards.

At night, these new sources of light would be visible from a distance; however, the addition of new light sources associated with the proposed project would generally blend in with existing development on the project site and would represent a continuation of the existing development within this area of the City.

Light and glare impacts were not identified in the Eastern Dublin EIR. Therefore, development of the proposed project would result in a change in light and glare conditions as compared to the project evaluated in the Eastern Dublin EIR and would result in impacts that were not identified in the Eastern Dublin EIR. However, the proposed project would be required to comply with the lighting policies outlined in the City's Municipal Code, which establish minimum safety lighting levels and require light fixtures to be directed downward and away from adjoining properties, so that no on-site light fixture would directly illuminate any off-site areas. With adherence to these requirements, the proposed project would not create a new source of substantial light or glare, which would adversely affect day or nighttime views in the area. Therefore, this impact would be less than significant.

Conclusion

The project does not propose substantial changes that were not previously analyzed in the Eastern Dublin EIR that would require major changes to the Eastern Dublin EIR. Based on the information in the Eastern Dublin EIR and this environmental analysis, with adherence to applicable regulatory requirements and mitigation measures identified in the Eastern Dublin EIR, there would be no new or substantially more severe significant impacts to aesthetics beyond what has been analyzed in the previous Eastern Dublin EIR, and no other CEQA standards for supplemental review are met. Therefore, no further environmental review is required.

Agricultural and Forestry Resources

ENVIRONMENTAL IMPACTS Issues	Potentially Significant Issues	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No New Impact
2. AGRICULTURE RESOURCES. In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Department of Conservation as an optional model to use in assessing impacts on agriculture and farmland. Would the project:				
a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?				X
b) Conflict with existing zoning for agricultural use, or a Williamson Act contract?				X
c) Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland to non-agricultural use or conversion of forest land to non-forest use?				X
d) Result in the loss of forest land or conversion of forest land to non-forest use?				X
e) Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?				X

Environmental Setting

The project site is not used for agricultural production and is not designated Prime Farmland, Unique Farmland, or Farmland of Statewide Importance on maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency. The surrounding area is characterized by undeveloped open space and residential uses.

The Farmland Mapping and Monitoring Program categorizes the project site as Urban and Built-Up Land and Grazing Land. Urban and Built-Up Land is defined as land that is occupied by structures with a building density of at least one unit to 1.5 acres, or approximately six structures to a 10-acre parcel. Examples of Urban and Built-Up Land include residential, industrial, commercial, institutional facilities, cemeteries, airports, golf courses, sanitary landfills, sewage treatment, and water control structures. Grazing Land is defined as land on which the existing vegetation is suited to the grazing of livestock.

No forest land exists on the project site; however, riparian vegetation associated with the unnamed tributary borders the project site to the south.

Previous CEQA Documents

Eastern Dublin EIR

The Eastern Dublin EIR identified less than significant impacts related to discontinuation of agricultural uses, loss of farmlands of local importance, indirect impacts resulting from non-renewal of Williamson Act contracts, and conversion of non-urban lands. Although the Eastern Dublin EIR determined that the loss of agricultural uses within the EDSP was less than significant, the Eastern Dublin EIR identified the cumulative loss of agricultural lands and open space as a significant unavoidable impact and a Statement of Overriding Considerations was adopted for this impact.

Project Impacts and Mitigation Measures

(a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (farmland)

No New Impact. As described above, the project site is not used for agricultural production and is not designated Prime Farmland, Unique Farmland, or Farmland of Statewide Importance. Therefore, the proposed project would not convert Prime Farmland, Unique Farmland, Farmland of Statewide Importance, or any other type of farmland to non-agricultural uses. No new impacts or substantially more severe significant impacts to Prime Farmland, Unique Farmland, or Farmland of Statewide Importance would occur. The project does not propose substantial changes that were not previously analyzed in the Eastern Dublin EIR that would require major changes to the Eastern Dublin EIR. Based on the information in the Eastern Dublin EIR and this environmental analysis, there would be no new impacts to Prime Farmland, Unique Farmland or Farmland of Statewide Importance beyond what has been analyzed in the previous Eastern Dublin EIR, and no other CEQA standards for supplemental review are met. Therefore, no further environmental review is required.

(b) Conflict with existing zoning for agricultural use or a Williamson Act contract

No New Impact. The project site is currently classified as Planned Development (PD) Ordinance No. 24-00 and Ordinance No. 12-14 on the City's Zoning Map. The project site is not currently used for agricultural purposes, not zoned for agricultural uses, and is not protected by, or eligible for, a Williamson Act contract. Therefore, the proposed project would not conflict with existing zoning for agricultural uses or Williamson Act contracts. The project does not propose substantial changes that were not previously analyzed in the Eastern Dublin EIR that would require major changes to the Eastern Dublin EIR. Based on the information in the Eastern Dublin EIR and this environmental analysis, there would be no new impacts related to zoning for agricultural use or Williamson Act contract beyond what has been analyzed in the previous Eastern Dublin EIR, and no other CEQA standards for supplemental review are met. Therefore, no further environmental review is required.

(c) Conversion of land from Farmland or forest use

No New Impact. As described above, the project site is currently classified as PD Ordinance No. 24-00 and Ordinance No. 12-14 on the City's Zoning Map, which allows for residential uses on the project site. Neither the project site nor the surrounding area is zoned for agricultural use, forest land, timberland, or timberland production. The project does not propose substantial changes that were not previously analyzed in the Eastern Dublin EIR that would require major changes to the Eastern Dublin EIR. Based on the information in the Eastern Dublin EIR and this environmental analysis, there would be no new impacts related to conversion of farmland or forest land beyond what has been analyzed in the previous Eastern Dublin EIR, and no other CEQA standards for supplemental review are met. Therefore, no further environmental review is required.

(d) Result in loss of forest land or conversion of forest

No New Impact. No forest or timberland exists on the project site or in the surrounding area and the proposed project would not result in the loss of forest land or the conversion of forest land to non-forest use. The project does not propose substantial changes that were not previously analyzed in the Eastern Dublin EIR that would require major changes to the Eastern Dublin EIR. Based on the information in the Eastern Dublin EIR and this environmental analysis, there would be no new impacts related to conversion of forest land beyond what has been analyzed in the previous Eastern Dublin EIR, and no other CEQA standards for supplemental review are met. Therefore, no further environmental review is required.

(e) Conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use

No New Impact. The project site is not currently used as farmland or forest land. The proposed project would not result in the conversion of farmland on or off the project site to non-agricultural uses because there are no agricultural uses on or in the immediate vicinity of the project site. Likewise, the proposed project would not result in impacts related to changes in the existing environment that could result in the conversion of agricultural land to non-agricultural uses. The project does not propose substantial changes that were not previously analyzed in the Eastern Dublin EIR that would require major changes to the Eastern Dublin EIR. Based on the information in the Eastern Dublin EIR and this environmental analysis, there would be no new impacts related to conversion of farmland or forest land beyond what has been analyzed in the previous Eastern Dublin EIR, and no other CEQA standards for supplemental review are met. Therefore, no further environmental review is required.

Conclusion

The project does not propose substantial changes that were not previously analyzed in the Eastern Dublin EIR that would require major changes to the Eastern Dublin EIR. Based on the information in the Eastern Dublin EIR and this environmental analysis, with adherence to applicable regulatory requirements, there would be no new impacts to agricultural and forestry resources beyond what has been analyzed in the previous Eastern Dublin EIR, and no other

CEQA standards for supplemental review are met. Therefore, no further environmental review is required.

Air Quality

ENVIRONMENTAL IMPACTS Issues	Potentially Significant Issues	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No New Impact
3. AIR QUALITY. Where available, the significance criteria established by the applicable air quality management district or air pollution control district may be relied upon to make the following determinations. Would the project:				
a) Conflict with or obstruct implementation of the applicable air quality plan?			X	
b) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?				X
c) Expose sensitive receptors to substantial pollutant concentrations?		X		
d) Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?				X

Environmental Setting

The proposed project is located in the City of Dublin and is within the jurisdiction of the Bay Area Air Quality Management District (BAAQMD), which regulates air quality in the San Francisco Bay Area. Air quality conditions in the San Francisco Bay Area have improved significantly since BAAQMD was created in 1955. Ambient concentrations of air pollutants and the number of days during which the region exceeds air quality standards have fallen substantially. In Dublin, and the rest of the Air Basin, exceedances of air quality standards occur primarily during meteorological conditions conducive to high pollution levels, such as cold, windless winter nights or hot, sunny summer afternoons.

Within BAAQMD, ambient air quality standards for ozone, carbon monoxide (CO), nitrogen dioxide (NO₂), sulfur dioxide (SO₂), particulate matter (PM₁₀, PM_{2.5}), and lead (Pb) have been set by both the State of California and federal government. The State has also set air quality standards for sulfate and visibility. BAAQMD is listed as a State non-attainment area for ozone and particulate matter air quality standards. BAAQMD is classified as a non-attainment area for the federal ozone 8-hour standard and non-attainment for the federal PM_{2.5} 24-hour standard.

Previous CEQA Documents

Eastern Dublin EIR

The Eastern Dublin EIR identified that mobile source CO emissions would be less than significant and construction dust emissions would be less than significant with implementation of mitigation measures identified in the Eastern Dublin EIR. In addition, the Eastern Dublin EIR identified that impacts associated with construction equipment/vehicle emissions, mobile source reactive organic gases (ROG) and nitrogen oxide (NO_x) emissions, and stationary source emissions would be significant and unavoidable. Thus, a Statement of Overriding Considerations was adopted. The following mitigation measures would apply to the proposed project:

MM 3.11/1.0 The City of Dublin shall:

- Require watering in late morning and at the end of the day; the frequency of watering should increase if wind exceeds 15 mph. Watering should include all excavated and graded areas and material to be transported off-site. Use recycled or other non-potable water resources where feasible.
- Require daily cleanup of mud and dust carried onto street surfaces by construction vehicles.
- Require excavation haul trucks to use tarpaulins or other effective covers.
- Require that, upon completion of construction, measures shall be taken to reduce wind erosion. Replanting and repaving should be completed as soon as possible.
- Require that unnecessary idling of construction equipment is avoided.
- Require that, after grading is completed, fugitive dust on exposed soil surfaces shall be controlled using the following methods:
 - All inactive portions of the construction site should be seeded and watered until grass growth is evident.
 - Require that all portions of the site shall be sufficiently watered to prevent excessive amounts of dust.
 - Require that, at all times, the following procedures should be followed:
 - On-site vehicle speed shall be limited to 15 mph.
 - Use of petroleum-based palliative shall meet the road oil requirements of the Air Quality District. Non-petroleum-based tackifiers may be required by the Public Works Director.
 - The Public Works Department will handle all dust complaints. The Public Works Director may require the services of an air quality consultant to

advise the City on the severity of the dust problem and additional ways to mitigate impacts on residents, including temporarily halting project construction. Dust concerns in adjoining communities as well as the City of Dublin shall be controlled. Control measures shall be related to wind conditions. Air quality monitoring of PM levels shall be provided as directed by the Public Works Director in Dublin.

MM 3.11/2.0 Minimize construction interference with regional non-project traffic movement by:

- Scheduling receipt of construction materials to non-peak travel periods.
- Routing construction traffic through areas of least impact sensitivity.
- Limiting lane closures and detours to off-peak travel periods.
- Providing ride-share incentives for contractor and subcontractor personnel.

MM 3.11/3.0 Require emissions control from on-site equipment through a routine mandatory program of low-emissions tune-ups.

MM 3.11/4.0 Require preparation of a construction impact reduction plan that incorporates all proposed air quality mitigation strategies with clearly defined responsibilities for plan implementation and supervision.

MM 3.11/5.0 Exercise interagency cooperation with a sub-regional and on a regional basis to integrate air quality planning efforts with transportation, transit, and other infrastructure plans.

MM 3.11/6.0 Maintain consistency among specific development plans and regional transportation and growth management plans.

MM 3.11/7.0 Implement transportation demand management (TDM) techniques to reduce mobile source emissions.

MM 3.11/8.0 Optimize the existing transportation system to reduce congestion and shift travel to non-peak travel periods.

MM 3.11/9.0 Coordinate levels of growth with roadway transportation facilities improvements to accommodate travel demand without inducing demand by providing excess system capacity.

MM 3.11/10.0 Encourage mixed-use development that provides housing, jobs, goods and services in close proximity.

MM 3.11/11.0 Require linkage between growth of housing and job opportunities consistent with a positive sub-regional contribution to jobs/housing ratio balances.

MM 3.11/12.0 Stationary source emissions associated with Project development should also be minimized where feasible to reduce overall cumulative impacts. Minimum energy conservation standards are established in Title 24 of the California Code of Regulations. Design practice can achieve a slightly greater level of conservation than the minimum standards. A conservation target level for some fraction of Eastern Dublin development of 10 percent above the minimum should be implemented as an appropriate acknowledgement of the desired "environmentally-friendly" community character for this Project.

MM 3.11/13.0 Solid waste recycling should be included in all development planning to ensure that recycling criteria specified in AB-939 can be most easily met.

Project Impacts and Mitigation Measures

(a) Consistency with air quality plans

Less Than Significant Impact. BAAQMD's Clean Air Plan is a comprehensive plan to improve Bay Area air quality and protect public health. The Clean Air Plan defines control strategies to reduce emissions and ambient concentrations of air pollutants; safeguard public health by reducing exposure to air pollutants that pose the greatest health risk, with an emphasis on protecting the communities most heavily affected by air pollution; and reduce greenhouse gas (GHG) emissions to protect the climate. Consistency with the Clean Air Plan can be determined if the project: (1) supports the goals of the Clean Air Plan; (2) includes applicable control measures from the Clean Air Plan; and (3) would not disrupt or hinder implementation of any control measures from the Clean Air Plan.

Clean Air Plan Goals. The primary goals of the Bay Area Clean Air Plan are to: attain air quality standards, reduce population exposure and protect public health in the Bay Area, and reduce GHG emissions and protect climate.

BAAQMD has established significance thresholds for project construction and operational impacts at a level at which the cumulative impact of exceeding these thresholds would have an adverse impact on the region's attainment of air quality standards. The health and hazards thresholds were established to help protect public health. As discussed below in Section 3b, implementation of the proposed project would result in less-than-significant operation-period emissions and, with implementation of implementation of Mitigation Measures 3.11/2.0 and 3.11/3.0 from the Eastern Dublin EIR, the project would result in less-than-significant construction-period emissions. Therefore, the project would not conflict with the Clean Air Plan goals.

Clean Air Plan Control Measures. The control strategies of the Clean Air Plan include measures in the following categories: Stationary Source Measures, Transportation Measures, Energy

Measures, Building Measures, Agriculture Measures, Natural and Working Lands Measures, Waste Management Measures, Water Measures, and Super-GHG Pollutants Measures.

Stationary Source Control Measures. The Stationary Source Control Measures, which are designed to reduce emissions from stationary sources such as metal melting facilities, cement kilns, refineries, and glass furnaces, are incorporated into rules adopted by BAAQMD and then enforced by BAAQMD's Permit and Inspection programs. Since the project would not include any stationary sources of emissions, the Stationary Source Control Measures of the Clean Air Plan are not applicable to the project.

Transportation Control Measures. BAAQMD identifies Transportation Control Measures as part of the Clean Air Plan to decrease emissions of criteria pollutants, toxic air contaminants (TACs), and GHGs by reducing demand for motor vehicle travel, promoting efficient vehicles and transit service, decarbonizing transportation fuels, and electrifying motor vehicles and equipment. The project would construct a performing arts center on a site immediately adjacent to the existing Quarry Lane School. The proposed project would provide a dedicated space for the existing performing arts program but would not include any growth in total student enrollment or an expansion of existing school operations. In addition, the proposed project would not result in a change in trip generation. Therefore, the project would not conflict with the BAAQMD's initiatives to reduce vehicle trips and vehicle miles traveled (VMT) and would increase the use of alternate means of transportation.

Energy Control Measures. The Clean Air Plan also includes Energy Control Measures, which are designed to reduce emissions of criteria air pollutants, TACs, and GHGs by decreasing the amount of electricity consumed in the Bay Area, as well as decreasing the carbon intensity of the electricity used by switching to less GHG-intensive fuel sources for electricity generation. Since these measures apply to electrical utility providers and local government agencies (and not individual projects), the Energy Control Measures of the Clean Air Plan are not applicable to the project.

Building Control Measures. BAAQMD has authority to regulate emissions from certain sources in buildings such as boilers and water heaters but has limited authority to regulate buildings themselves. Therefore, the strategies in the control measures for this sector focus on working with local governments that do have authority over local building codes, to facilitate adoption of best GHG control practices and policies. The proposed project would be required to comply with the latest California Green Building Standards Code (CALGreen) standards. Therefore, the Building Control Measures of the Clean Air Plan are not applicable to the project.

Agriculture Control Measures. The Agriculture Control Measures are designed to primarily reduce emissions of methane. Since the project does not include any agricultural activities, the Agriculture Control Measures of the Clean Air Plan are not applicable to the project.

Natural and Working Lands Control Measures. The Natural and Working Lands Control Measures focus on increasing carbon sequestration on rangelands and wetlands, as well as encouraging local governments to enact ordinances that promote urban-tree plantings. Since

the project does not include the disturbance of any rangelands or wetlands, the Natural and Working Lands Control Measures of the Clean Air Plan are not applicable to the project.

Waste Management Control Measures. The Waste Management Measures focus on reducing or capturing methane emissions from landfills and composting facilities, diverting organic materials away from landfills, and increasing waste diversion rates through efforts to reduce, reuse, and recycle. The project would comply with local requirements for waste management (e.g., recycling and composting services). Therefore, the project would be consistent with the Waste Management Control Measures of the Clean Air Plan.

Water Control Measures. The Water Control Measures focus on reducing emissions of criteria pollutants, TACs, and GHGs by encouraging water conservation, limiting GHG emissions from publicly owned treatment works (POTWs), and promoting the use of biogas recovery systems. Since these measures apply to POTWs and local government agencies (and not individual projects), the Water Control Measures are not applicable to the project.

Super-GHG Control Measures. The Super-GHG Control Measures are designed to facilitate the adoption of best GHG control practices and policies through BAAQMD and local government agencies. Since these measures do not apply to individual projects, the Super-GHG Control Measures are not applicable to the project.

Clean Air Plan Implementation. As discussed above, the proposed project would implement the applicable measures outlined in the Clean Air Plan, including Transportation Control Measures. Therefore, the project would not disrupt or hinder implementation of a control measure from the Clean Air Plan. The Eastern Dublin EIR did not evaluate consistency with the applicable clean air plan; therefore, development of the proposed project would result in impacts that were not identified in the Eastern Dublin EIR. However, because the proposed project would be consistent with the Clean Air Plan, this impact would be less than significant.

(b) Violate air quality standards or cause cumulatively considerable air pollutants

No New Impact. Both State and federal governments have established health-based Ambient Air Quality Standards for six criteria air pollutants: CO, ozone (O_3), NO_2 , SO_2 , Pb, and suspended particulate matter (PM). These standards are designed to protect the health and welfare of the populace with a reasonable margin of safety. As identified above, BAAQMD is under State non-attainment status for ozone, PM_{10} , and $PM_{2.5}$ standards. The Air Basin is also classified as non-attainment for both the federal ozone 8-hour standard and the federal $PM_{2.5}$ 24-hour standard.

Air quality standards for the proposed project are regulated by the BAAQMD CEQA Air Quality Guidelines. According to the BAAQMD CEQA Air Quality Guidelines, to meet air quality standards for operational-related criteria air pollutant and air precursor impacts, the project must not:

- Contribute to CO concentrations exceeding the State ambient air quality standards;

- Generate average daily construction emissions of ROG, NO_x, or PM_{2.5} greater than 54 pounds per day or PM₁₀ exhaust emissions greater than 82 pounds per day; or
- Generate average operational emissions of ROG, NO_x or PM_{2.5} of greater than 10 tons per year or 54 pounds per day or PM₁₀ emissions greater than 15 tons per year or 82 pounds per day.

The following sections describe the proposed project's construction- and operation-related air quality impacts and CO impacts.

Construction Emissions. As discussed above, the Eastern Dublin EIR found that that proposed development would result in significant and unavoidable impacts associated with construction activities. Mitigation Measures 3.11/1.0, 3.11/2.0, 3.11/3.0, and 3.11/4.0 were identified, but were insufficient to reduce impacts to a less-than-significant level and therefore a Statement of Overriding Considerations was adopted for the project.

During construction of the proposed project, construction dust would affect local and regional air quality at various times during the build-out period of the project. The dry, windy climate of the area during the summer months combined with the fine, silty soils of the region create a high potential for dust generation. Emissions during the grading phase of construction are primarily associated with the exhaust of large earth moving equipment and the dust which is generated through grading activities. Emissions in later stages of construction are primarily associated with construction employee commute vehicles, asphalt paving, mobile equipment, stationary equipment, and architectural coatings.

The effects of construction activities would be increased dustfall and locally elevated levels of PM₁₀ near the construction activity. Depending on the weather, soil conditions, the amount of activity taking place, and nature of dust control efforts, these impacts could affect existing or future residential areas within or near the project.

Water or other soil stabilizers can be used to control dust, resulting in emission reductions of 50 percent or more. BAAQMD has established standard measures for reducing fugitive dust emissions (PM₁₀). With the implementation of these Basic Construction Mitigation Measures, fugitive dust emissions from construction activities would not result in adverse air quality impacts.

In addition to dust related PM₁₀ emissions, heavy trucks and construction equipment powered by gasoline and diesel engines would generate CO, SO₂, NO_x, ROGs and some soot particulate (PM_{2.5} and PM₁₀) in exhaust emissions. If construction activities were to increase traffic congestion in the area, CO and other emissions from traffic would increase slightly while those vehicles are delayed. These emissions would be temporary and limited to the immediate area surrounding the construction site.

Construction emissions were estimated for the project using the California Emissions Estimator Model (CalEEMod) version 2022.1, consistent with BAAQMD recommendations. Construction of the proposed project is anticipated to begin in fall of 2023 and be completed by fall of 2024,

which was included in CalEEMod. In addition, the project would require the off-haul of approximately 2,775 cubic yards of material which was also included in CalEEMod. The proposed project would require demolition of the existing residence and associated outbuildings, resulting in approximately 6,200 square feet of material that would be removed from the project site, which was included in CalEEMod. In addition, this analysis assumes the use of Tier 2 construction equipment. Construction-related emissions are presented in Table A. CalEEMod output sheets are included in Appendix A.

Table A: Project Construction Emissions in Pounds Per Day

Project Construction	ROG	NO _x	Exhaust PM ₁₀	Fugitive Dust PM ₁₀	Exhaust PM _{2.5}	Fugitive Dust PM _{2.5}
Average Daily Emissions	0.8	9.9	0.4	0.3	0.4	0.1
BAAQMD Thresholds	54.0	54.0	82.0	BMP	54.0	BMP
Exceed Threshold?	No	No	No	No	No	No

Source: LSA (January 2023).

BMP = Best Management Practices

As shown in Table A, construction emissions associated with the project would be less than significant for ROG, NO_x, PM_{2.5}, and PM₁₀ exhaust emissions. BAAQMD requires the implementation of the BAAQMD's Basic Construction Mitigation Measures (best management practices) to minimize construction fugitive dust impacts. The Eastern Dublin EIR identified Mitigation Measure 3.11/1.0 to minimize emission of dust. BAAQMD has since adopted newer and more restrictive standards to reduce construction dust and construction vehicle emissions to which the project applicant must adhere in order to reduce this construction impact to a less-than-significant level. Mitigation Measure 3.11-1.0 has been modified (with additions in double-underline and deletions in strikethrough), as shown below, to include the latest BAAQMD Basic Construction Measures. Mitigation Measures 3.11/2.0, 3.11/3.0, and 3.11/4.0 would still be applicable to the proposed project.

MM 3.11/1.0 The City of Dublin shall:

- Require watering in late morning and at the end of the day; the frequency of watering should increase if wind exceeds 15 mph. Watering should include all excavated and graded areas and material to be transported off-site. Use recycled or other non-potable water resources where feasible.
- Require daily cleanup of mud and dust carried onto street surfaces by construction vehicles.
- Require excavation haul trucks to use tarpaulins or other effective covers.
- Require that, upon completion of construction, measures shall be taken to reduce wind erosion. Replanting and repaving should be completed as soon as possible.

- Require that unnecessary idling of construction equipment is avoided.
- Require that, after grading is completed, fugitive dust on exposed soil surfaces shall be controlled using the following methods:
 - All inactive portions of the construction site should be seeded and watered until grass growth is evident.
 - Require that all portions of the site shall be sufficiently watered to prevent excessive amounts of dust.
 - Require that, at all times, the following procedures should be followed:
 - On-site vehicle speed shall be limited to 15 mph.
 - Use of petroleum-based palliative shall meet the road oil requirements of the Air Quality District. Non-petroleum-based tackifiers may be required by the Public Works Director.
 - The Public Works Department will handle all dust complaints. The Public Works Director may require the services of an air quality consultant to advise the City on the severity of the dust problem and additional ways to mitigate impacts on residents, including temporarily halting project construction. Dust concerns in adjoining communities as well as the City of Dublin shall be controlled. Control measures shall be related to wind conditions. Air quality monitoring of PM levels shall be provided as directed by the Public Works Director in Dublin.
 - All exposed surfaces (e.g., parking areas, staging areas, soil piles, graded areas, and unpaved access roads) shall be watered two times per day.
 - All haul trucks transporting soil, sand, or other loose material off-site shall be covered.
 - All visible mud or dirt tracked-out onto adjacent public roads shall be removed using wet power vacuum street sweepers at least once per day. The use of dry power sweeping is prohibited.
 - All vehicle speeds on unpaved roads shall be limited to 15 mph.
 - All roadways, driveways, and sidewalks to be paved shall be completed as soon as possible.
 - Building pads shall be laid as soon as possible after grading unless seeding or soil binders are used.
 - Idling times shall be minimized either by shutting equipment off when not in use or reducing the maximum idling time to 5 minutes (as required by the California airborne toxics control measure Title 13, Section 2485 of California

Code of Regulations [CCR]). Clear signage shall be provided for construction workers at all access points.

- All construction equipment shall be maintained and properly tuned in accordance with manufacturer's specifications. All equipment shall be checked by a certified mechanic and determined to be running in proper condition prior to operation.
- A publicly visible sign shall be posted with the telephone number and person to contact at the City of Dublin regarding dust complaints. This person shall respond and take corrective action within 48 hours. BAAQMD's phone number shall also be visible to ensure compliance with applicable regulations.

With implementation of Mitigation Measure 3.11/1.0, as modified above, and Mitigation Measures 3.11/2.0, 3.11/3.0 and 3.11/4.0, the proposed project would not result in any new or more severe impacts related to construction period emissions compared to those previously identified in the Eastern Dublin EIR.

Operational Emissions. The Eastern Dublin EIR found that proposed development would result in significant and unavoidable impacts associated with project operation activities. Mitigation Measures 3.11/5.0, 3.11/6.0, 3.11/7.0, 3.11/8.0, 3.11/9.0, 3.11/10.0, and 3.11/11.0 were identified but were insufficient to reduce impacts to a less than significant level and therefore a Statement of Overriding Considerations was adopted for the project.

Long-term air pollutant emission impacts associated with the proposed project are those related to mobile sources (e.g., vehicle trips), energy sources (e.g., electricity and natural gas), and area sources (e.g., architectural coatings and the use of landscape maintenance equipment).

PM₁₀ emissions result from running exhaust, tire and brake wear, and the entrainment of dust into the atmosphere from vehicles traveling on paved roadways. Entrainment of PM₁₀ occurs when vehicle tires pulverize small rocks and pavement and the vehicle wakes generate airborne dust. The contribution of tire and brake wear is small compared to the other PM emission processes. Gasoline-powered engines have small rates of particulate matter emissions compared with diesel-powered vehicles. The project would construct a performing arts center immediately adjacent to the existing Quarry Lane School site. The proposed project would provide a dedicated space for the existing performing arts program but would not include any growth in total student enrollment or an expansion of existing school operations. As discussed in Section 17, Transportation, the proposed project would not result in a change in trip generation; therefore, the proposed project would not result in mobile source emissions.

Energy source emissions result from activities in buildings for which natural gas is used. The quantity of emissions is the product of usage intensity (i.e., the amount of gas) and the emission factor of the fuel source. No new natural gas service is permitted beginning in January

2023, so no new natural gas connections would be required. As such, the proposed project would not result in energy source emissions.

Typically, area source emissions consist of direct sources of air emissions located at the project site, including architectural coatings and the use of landscape maintenance equipment.

Emission estimates for operation of the project were calculated using CalEEMod. Model results are shown in Table B. The primary emissions associated with the project are regional in nature, meaning that air pollutants are rapidly dispersed on release or, in the case of vehicle emissions associated with the project, emissions are released in other areas of the Air Basin. The daily and annual emissions associated with project operational trip generation, energy, and area sources are identified in Table B for ROG, NO_x, PM₁₀, and PM_{2.5}.

Table B: Project Operational Emissions

	ROG	NO_x	PM₁₀	PM_{2.5}
Pounds Per Day				
Area Source Emissions	0.4	<0.1	<0.1	<0.1
Energy Source Emissions	0.0	0.0	0.0	0.0
Mobile Source Emissions	0.0	0.0	0.0	0.0
Total Project Emissions	0.4	<0.1	<0.1	<0.1
BAAQMD Thresholds	54.0	54.0	82.0	54.0
Exceed Threshold?	No	No	No	No
Tons Per Year				
Area Source Emissions	0.1	<0.1	<0.1	<0.1
Energy Source Emissions	0.0	0.0	0.0	0.0
Mobile Source Emissions	0.0	0.0	0.0	0.0
Total Project Emissions	0.1	<0.1	<0.1	<0.1
BAAQMD Thresholds	10.0	10.0	15.0	10.0
Exceed Threshold?	No	No	No	No

Source: LSA (January 2023).

The results shown in Table B indicate the project would not exceed the significance criteria for daily or annual ROG, NO_x, PM₁₀ or PM_{2.5} emissions; therefore, the proposed project would not have a significant effect on regional air quality.

Localized CO Impacts. The Eastern Dublin EIR found that the project would generate additional traffic volumes, increasing local levels of carbon monoxide. However, the Eastern Dublin EIR determined that such increases would be below the standard of air quality significance.

Emissions and ambient concentrations of CO have decreased dramatically in the Bay Area with the introduction of the catalytic converter in 1975. No exceedances of the State or federal CO standards have been recorded at Bay Area monitoring stations since 1991. BAAQMD's 2017 CEQA Guidelines include recommended methodologies for screening and quantifying concentrations of localized CO levels for intersections that would be in a project vicinity. A screening level analysis using guidance from the BAAQMD CEQA Guidelines was performed to determine the impacts of the project. The screening methodology provides a conservative indication of whether the implementation of a proposed project would result in significant CO emissions. According to BAAQMD's CEQA Guidelines, a proposed project would result in a less-than-significant impact to localized CO concentrations if the following screening criteria are met:

- The project is consistent with an applicable congestion management program established by the county congestion management agency for designated roads or highways, and the regional transportation plan and local congestion management agency plans.
- Project traffic would not increase traffic volumes at affected intersections to more than 44,000 vehicles per hour.
- The project would not increase traffic volumes at affected intersections to more than 24,000 vehicles per hour where vertical and/or horizontal mixing is substantially limited (e.g., tunnel, parking garage, bridge underpass, natural or urban street canyon, or below-grade roadway).

Implementation of the proposed project would not conflict with the Alameda County Transportation Commission's congestion management programs. The proposed project would not result in a change in trip generation; therefore, the project would not contribute to peak hour traffic volumes at intersections in the vicinity of the project site would be well below 44,000 vehicles per hour. Therefore, the proposed project would not result in localized CO concentrations that exceed State or federal standards.

With adherence to applicable regulatory requirements and mitigation measures identified in the Eastern Dublin EIR, as modified above, there would be no new or substantially more severe significant impacts to air quality resources beyond what has been analyzed in the Eastern Dublin EIR.

The project does not propose substantial changes that were not previously analyzed in the Eastern Dublin EIR that would require major changes to the Eastern Dublin EIR. Based on the information in the Eastern Dublin EIR and this environmental analysis, with adherence to applicable regulatory requirements and mitigation measures identified in the Eastern Dublin EIR, as modified above, there would be no new impacts related to air emissions and pollutant

concentrations beyond what has been analyzed in the previous Eastern Dublin EIR, and no other CEQA standards for supplemental review are met for this project impact. Therefore, no further environmental review is required.

(c) Expose sensitive receptors to pollutant concentrations

Less Than Significant Impact with Mitigation Incorporated. Sensitive receptors are defined as residential uses, schools, daycare centers, nursing homes, and medical centers. Individuals particularly vulnerable to diesel particulate matter include children, whose lung tissue is still developing, and the elderly, who may have serious health problems that can be aggravated by exposure to diesel particulate matter. Exposure from diesel exhaust associated with construction activity contributes to both cancer and chronic non-cancer health risks.

The project site is located in an urban area in close proximity to existing residential uses that could be exposed to diesel emission exhaust during the construction period. In addition, the project site is located at the existing Quarry Lane School, and construction could expose students to diesel emission exhaust.

To estimate the potential cancer risk from project construction equipment exhaust (including diesel particulate matter), a dispersion model was used to translate an emission rate from the source location to a concentration at the receptor location (i.e., a nearby residential land use). Dispersion modeling varies from a simpler, more conservative screening-level analysis to a more complex and refined detailed analysis. This refined assessment was conducted using the California Air Resources Board (CARB) exposure methodology, with the air dispersion modeling performed using the United States Environmental Protection Agency (USEPA) dispersion model AERMOD. The model provides a detailed estimate of exhaust concentrations based on site and source geometry, source emissions strength, distance from the source to the receptor, and site-specific meteorological data. Table C, below, identifies the results of the analysis utilizing the standard Tier 2 construction equipment. Model snap shots of the sources are provided in Appendix B.

Table C: Unmitigated Inhalation Health Risks from Project Construction to Off-Site Receptors

	Carcinogenic Inhalation Health Risk in One Million	Chronic Inhalation Hazard Index	Acute Inhalation Hazard Index	Annual PM _{2.5} Concentration (µg/m ³)
School Receptor Risk	15.16	0.057	0.000	0.284
Residential Receptor Risk	14.55	0.015	0.000	0.074
BAAQMD Significance Threshold	10.0	1.0	1.0	0.30
Exceed Threshold?	Yes	No	No	No

Source: LSA (January 2023).

BMP = Best Management Practices

As shown in Table C, the maximum cancer risk for the school receptor maximally exposed individual (MEI) would be 15.16 in one million, which would exceed the BAAQMD cancer risk threshold of 10 in one million. The residential receptor MEI risk would be lower at 14.55 in one million, but which would also exceed the threshold. The total chronic hazard index would be 0.057 for the school receptor MEI and 0.015 for the residential receptor MEI, which is below the threshold of 1.0. In addition, the total acute hazard index would be nominal (0.000), which would also not exceed the threshold of 1.0. The results of the analysis indicate that the total PM_{2.5} concentration would be 0.284 µg/m³ for the school receptor MEI and 0.074 for the residential receptor MEI, both of which would not exceed the BAAQMD significance threshold of 0.30 µg/m³. As indicated above, the cancer risk of 15.16 in one million for the school receptor MEI and 14.55 in one million for the residential receptor MEI would exceed BAAQMD thresholds. Therefore, implementation of Project-Specific Mitigation Measure AIR-1 would be required to reduce substantial pollutant concentrations during project construction.

Project-Specific MM AIR-1: During construction of the proposed project, the project contractor shall ensure all off-road diesel-powered construction equipment of 50 horsepower or more used for the project construction at a minimum meets the California Air Resources Board Tier 2 emissions standards equipped with Level 3 diesel particulate filters or the equivalent.

Table D identifies the results of the analysis with implementation of Project-Specific Mitigation Measure Mitigation Measure AIR-1.

Table D: Mitigated Inhalation Health Risks from Project Construction to Off-Site Receptors

	Carcinogenic Inhalation Health Risk in One Million	Chronic Inhalation Hazard Index	Acute Inhalation Hazard Index	Annual PM _{2.5} Concentration (µg/m ³)
School Receptor Risk	2.34	0.009	0.000	0.046
Residential Receptor Risk	2.25	0.002	0.000	0.012
BAAQMD Significance Threshold	10.0	1.0	1.0	0.30
Exceed Threshold?	No	No	No	No

Source: LSA (January 2023).

BMP = Best Management Practices

As shown in Table D, the mitigated cancer risk would be 2.34 in one million at the school receptor MEI and 2.25 in one million at the residential receptor MEI, which would not exceed the BAAQMD cancer risk of 10 in one million. Therefore, with implementation of Project-Specific Mitigation Measure AIR-1, construction of the proposed project would not exceed BAAQMD thresholds and would not expose nearby sensitive receptors to substantial pollutant concentrations.

Once the proposed project is constructed, the proposed project would not be a source of substantial emissions. Therefore, implementation of the proposed project would not result in new sources of TACs.

Therefore, the project would not expose sensitive receptors to substantial levels of TACs and this impact would be less than significant with mitigation incorporated.

(d) Odors

No New Impact. During construction, the various diesel-powered vehicles and equipment in use on the site would create localized odors. These odors would be temporary and are not likely to be noticeable for extended periods of time beyond the project site because construction activities would be temporary and odors generated from construction activities would be isolated to the immediate vicinity of the construction site. The potential for diesel odor impacts is, therefore, considered to be less than significant. In addition, the proposed project would not include any activities or operations that would generate objectionable odors and once operational, it would not be a source of odors. Therefore, the proposed project would not result in other emissions (such as those leading to odors) adversely affecting a substantial number of people.

The project does not propose substantial changes that were not previously analyzed in the Eastern Dublin EIR that would require major changes to the Eastern Dublin EIR. Based on the information in the Eastern Dublin EIR and this environmental analysis, there would be no new impacts related to odors beyond what has been analyzed in the previous Eastern Dublin EIR, and no other CEQA standards for supplemental review are met for these two project impacts. Therefore, no further environmental review is required.

Conclusion

The project does not propose substantial changes that were not previously analyzed in the Eastern Dublin EIR that would require major changes to the Eastern Dublin EIR for the following project impacts (subsections (b), and (d)): violation of air quality standards or cause cumulatively considerable air pollutants and odors. Based on the information in the Eastern Dublin EIR and this environmental analysis, with adherence to applicable regulatory requirements and mitigation measures identified in the Eastern Dublin EIR and modified above, there would be no new impacts to air quality beyond what has been analyzed in the previous Eastern Dublin EIR, and no other CEQA standards for supplemental review are met for these two project impacts. Therefore, no further environmental review is required for these project impacts.

Although the Eastern Dublin EIR did not evaluate consistency with the applicable clean air plan, the proposed project would be consistent with the Clean Air Plan. Therefore, based on this environmental analysis, the project impact related to consistency with air quality plans (subsection (a)) would be less than significant and no mitigation is required.

For the project impact related to exposure of sensitive receptors to pollutant concentrations (subsection (c)), the proposed project would not expose sensitive receptors to substantial levels

of TACs and this impact would be less than significant with implementation of a project specific mitigation measure (Mitigation Measure AIR-1).

Biological Resources

ENVIRONMENTAL IMPACTS Issues	Potentially Significant Issues	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No New Impact
4. BIOLOGICAL RESOURCES. Would the project:				
a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special-status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?				X
b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?				X
c) Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?				X
d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?				X
e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?				X
f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?				X

Environmental Setting

Methods

To identify special-status plant and animal species known to occur or potentially occurring in the project site vicinity, the following resources were queried: 1) California Department of Fish

and Wildlife California Natural Diversity Database (CNDDDB⁸) for species records within a 5-mile radius of the project site using Geographic Information Systems (GIS) software; 2) California Native Plant Society's (CNPS) Inventory of Rare and Endangered Plants of California⁹ for records of special-status plant species; 3) U.S. Fish and Wildlife Service (USFWS) Information for Planning and Consultation on-line system;¹⁰ and 4) milkweed tracker.¹¹ Previous biological resources reports for the project site were also reviewed.^{12,13}

A biologist conducted a reconnaissance-level field survey on January 6, 2023. During this survey, preliminary information on vegetation types, wildlife habitat, and sensitive habitat (e.g., wetlands) was collected.

The scientific and vernacular nomenclature for the plant and wildlife species used in this analysis are from the following standard sources: plants, Baldwin et al.¹⁴ and updates listed on the Jepson Herbarium website (ucjeps.berkeley.edu/eflora/); amphibians and reptiles, Crother;¹⁵ birds, American Ornithologists' Union and supplements through 2022;¹⁶ and mammals, Bradley et al.¹⁷

Project Site

The proposed project would redevelop the approximately 2.64-acre project site with the performing arts center. The house and associated buildings are situated at the western boundary along Tassajara Road, while ruderal (weedy) vegetation is located in the middle and eastern half of the site. Almost all of the site was disturbed in the past for its use as a landscape storage yard. An old foundation is located near the eastern boundary of the site. The ruderal vegetation is interspersed with gravel. A tributary to Tassajara Creek and its associated riparian woodland is located to the south and the existing school campus and landscaping are located to

the north. The riparian woodland and tributary are part of the Northern Drainage Conservation Area (NDCA) and are separated from the project site by an existing 6-foot-high chain link fence with a 3.5-foot-high sheet metal barrier along its base that was constructed along the southern site boundary. A concrete v-ditch and planted coast live oak (*Quercus agrifolia*), valley oak (*Q. lobata*), and ornamental plants are located north of the site between the project site and the existing school campus. An off-site eucalyptus (*Eucalyptus* sp.) grove is located to the east. A potentially jurisdictional seasonal wetland was also observed just east of the site. Elevations at the site range from approximately 435 to 460 feet (132 to 140 meters) above sea level.

The existing chain-link fence and sheet metal barrier that parallels the southern site boundary is an important component of the adjacent NDCA since it prevents wildlife from moving onto the site. The fence would remain intact during and after construction and should also extend from its current end at the southeastern corner of the site to the northeastern corner.

Vegetation and Cover Types. Vegetation includes mostly ruderal plants and non-native annual grasses, ornamental plants near the existing structures, and branches of riparian trees that are growing extending over the project site's southern boundary. A tributary to Tassajara Creek and associated riparian woodland occurs along the southern boundary. Other cover types on the site include paved and graveled hardscape.

Ruderal Non-Native Annual Grassland. The majority of the project site supports non-native annual grassland and ruderal vegetation. Grass species observed in the annual grasslands are almost exclusively non-native grasses, including wild oats (*Avena* spp.), ripgut brome (*Bromus diandrus*), soft chess (*B. hordeaceus*), and fox tail barley (*Hordeum murinum*). Non-native shrubs and forbs observed include black mustard (*Brassica nigra*), Russian thistle (*Salsola tragus*), Italian thistle (*Carduus pycnocephalus*), bull thistle (*Cirsium vulgare*), purple star thistle (*Centaurea calcitrapa*), yellow star thistle (*C. solstitialis*), curly dock (*Rumex crispus*), filaree (*Erodium* spp.), bristly ox-tongue (*Helminthotheca echiooides*), cheeseweed (*Malva parviflora*), and ornamental sage (*Salvia* sp.). A few small native coyote brush (*Baccharis pilularis*) shrubs and coast live oaks are also present in the grassland.

Riparian Woodland and Tributary. Riparian woodland vegetation that is associated with a tributary to Tassajara Creek is located along the southern boundary of the site. The riparian woodland is located within the 267-acre NDCA unit of the Dublin Ranch Preserve, managed by the Center for Natural Lands Management. The 717-acre preserve was established in 2010 as mitigation for the nearby Dublin Ranch development project. The stream associated with the riparian woodland is an unnamed tributary to Tassajara Creek, which flows to the west of the site. Woody vegetation along the approximately 880-foot channel section that parallels the southern site boundary consists of native species that have been planted as mitigation for the nearby Dublin Ranch development. The upper portions of the channel bank support remnant orchard tree snags likely retained as habitat for cavity-nesting birds, planted valley oak (*Quercus lobata*) saplings, and coyote brush (*Baccharis pilularis*) shrubs. Native riparian tree and shrub species planted on the lower bank and adjacent to the channel include box elder (*Acer negundo*), Fremont cottonwood (*Populus fremontii*), arroyo willow (*Salix lasiolepis*), and

California rose (*Rosa californica*). Other species observed in the riparian woodland include poison oak (*Toxicodendron diversilobum*) and non-native annual grasses. Branches of riparian trees, such as the arroyo willow, box elder, and valley oak hang over the chain-link fence along the property line.

Developed. Developed areas within the project site includes the existing houses, structures, gravel, driveways, old concrete foundations, and mowed grass, and various ornamental plants and a few orchard trees.

Wildlife. The project site is located mostly within an undeveloped ruderal non-native grassland interspersed with gravel and old concrete foundations, which provide suitable habitat for sparrows and small and medium-sized mammals. Trees and shrubs on the project site provide nesting habitat for bird species, such as white-tailed kite (*Elanus leucurus*) and California scrub-jay (*Aphelocoma californica*). The ruderal grassland provides habitat for ground-nesting passerines, such as western meadowlark (*Sturnella neglecta*). The gravel areas provide suitable nesting habitat for killdeer (*Charadrius vociferus*). During the winter, the resident bird community may be supplemented by species that breed further north or at higher elevations.

The ruderal grassland vegetation provides suitable habitat for common amphibians, such as Pacific treefrog (*Pseudacris regilla*), California slender salamander (*Batrachoseps attenuatus*), and arboreal salamander (*Aneides lugubris*) as well as common reptiles, such as southern alligator lizard (*Elgaria multicarinata*), western skink (*Plestidion skiltonianus*), and gopher snake (*Pituophis catenifer*).

Common mammal species that were observed or are likely to occur at the project site include northern raccoon (*Procyon lotor*), striped skunk (*Mephitis mephitis*), Virginia opossum (*Didelphis virginiana*), Botta's pocket gopher (*Thomomys bottae*), California ground squirrel (*Otospermophilus beecheyi*), Audubon's cottontail (*Sylvilagus audubonii*), and black-tailed deer (*Odocoileus hemionus columbianus*). Other small mammal species likely to occur on site include California vole (*Microtus californicus*), house mouse (*Mus musculus*), and roof rat (*Rattus rattus*). The grasslands also provide foraging habitat for common bat species, such as big brown bat (*Eptesicus fuscus*) and Brazilian free-tailed bat (*Tadarida brasiliensis*), although no bat roosts were observed during the reconnaissance-level field survey.

Wildlife species observed during the reconnaissance-level survey are listed in Table E. This analysis assumes many additional species are likely to occur on the site throughout the year based on the review of other databases.

Table E: Wildlife Species Observed During the Field Survey

Common Name	Scientific Name	Status
Birds		
Rock pigeon	<i>Columba livia</i>	R/I
Anna's hummingbird	<i>Calypte anna</i>	R

Table E: Wildlife Species Observed During the Field Survey

I = Introduced

R = Year-round resident; expected to nest/breed on the Project site or vicinity

W = Winter resident; winters on or near site but migrates out of Bay Area to nest

Previous CEQA Documents

Eastern Dublin EIR

The Eastern Dublin EIR identified potentially significant impacts related to direct habitat loss, indirect habitat loss due to vegetation removal for construction and development activities, and loss or degradation of sensitive habitat. The Eastern Dublin EIR also identified potentially significant impacts related to special-status wildlife, including San Joaquin kit fox, California red-legged frog (CRLF), California tiger salamander (CTS), western pond turtle, tri-colored blackbird, golden eagle, burrowing owl, American badger, special-status invertebrates and others.

Mitigation measures were identified to reduce significant impacts. One significant and unavoidable impact was identified related to the cumulative loss or degradation of botanically sensitive habitat, and a Statement of Overriding Considerations was adopted. The following mitigation measures would apply to the proposed project:

MM 3.7/1.0 Direct disturbance or removal of trees or native vegetation cover should be minimized and be restricted to those areas actually designated for the construction of improvements.

MM 3.7 /2.0 (Policy 6-23) Vegetation enhancement/management plans should be prepared for all open space areas (whether held publicly or privately) with the intent to

enhance the biologic potential of the area as wildlife habitat. The focus of such plans will be to reintroduce native species in order to increase the vegetative cover and plant diversity.

MM 3.7 / 3.0 The City will require a detailed revegetation/restoration plan to be developed for all disturbed areas that are to remain undeveloped. The plan will be developed by a qualified revegetation specialist, and should incorporate stockpiling of native topsoils as appropriate, for later reapplication to cut slopes, shoulders, and pads.

MM 3.7/5.0 All areas of disturbance should be revegetated as quickly as possible to prevent erosion. Native trees (preferably those species already on site), shrubs, herbs, and grasses should be used for revegetation of areas to remains as natural open space. The introduction of non-native plant species should be avoided.

MM 3.7 /6.0 Natural stream corridors, ponds, springs, seeps, and wetland areas shall be preserved wherever possible. Prior to submittal of development applications, the California Department of Fish and Game and the Army Corps of Engineers (COE) must be consulted to determine whether they have jurisdiction over the watercourse or wetland area.

MM 3.7 /7.0 Riparian and wetland areas shall be incorporated into greenbelt and open space areas as a means of preserving and enhancing their hydrologic and habitat value. Unavoidable loss of riparian habitat due to development shall be replaced as requested by CDFG. Loss of wetlands must be mitigated consistent with the COE's "no net loss" policy.

MM 3.7 /8.0 All stream corridors should be revegetated with native plant species to enhance their natural appearance and improve habitat values. Revegetation must be implemented by a professional approved by the California Department of Fish and Game.

MM 3.7 /9.0 Maintain natural open stream channels to carry storm runoff wherever feasible, rather than replacing with underground storm drainage systems. When extra capacity is necessary, retention basins are preferable to channelization, if the channelization would disturb riparian habitat. When channelization is necessary, the channel should be designed and constructed to accommodate both the projected flows and the growth of riparian vegetation, and to have more natural-appearing contours.

MM 3.7 / 10.0 (Policy 6-13). Establish a stream corridor system, which provides multi-purpose open space corridors capable of accommodating wildlife and pedestrian circulation. In order to facilitate the use of these corridors by both humans and wildlife, human activities (e.g., trails) should be limited to one side of the stream.

MM 3.7 / 11.0 The City shall require all project applicants to submit a multi-parameter wetlands delineation to the COE for verification and jurisdictional establishment and submit plans for proposed alteration to any watercourse to the DFG for their review and approval. Applicants will be required to submit these agencies' determinations, any required permits, and approved mitigation plans as part of the final development plan submittal.

MM 3.7/14.0 The City should enact and enforce an erosion and sedimentation control ordinance establishing performance standards to ensure maintenance of water quality and protection of stream channels. The ordinance should regulate grading and development activities adjacent to streams and wetland areas and require revegetation of all ground disturbance immediately after construction to reduce erosion potential. Until such an ordinance is in place, the City shall require project applicants to provide a detailed erosion and sedimentation control plan as part of the project submittal.

MM 3.7/16.0 Existing sensitive habitats shall be avoided and protected where feasible.

MM 3.7/17.0 Construction near drainages shall take place during the dry season.

MM 3.7/19.0 The use of rodenticides and herbicides within the Project area should be restricted to avoid impacts on wildlife. The City shall require any poisoning programs to be done in cooperation with and under supervision of the Alameda County Department of Agriculture.

MM 3.7/20.0 The City shall require development applicants to conduct a pre-construction survey within 60 days prior to habitat modification (clearing construction and road site, etc.) to verify the presence of sensitive species, especially the San Joaquin kit fox, nesting raptors, the red-legged frog, the western pond turtle, the California tiger salamander, the tri-colored blackbird and other species of concern.

MM 3.7 /21.0 Sensitive habitat shall be protected and enhanced by implementation of Mitigation Measures 3.7/2.0, 3.7/3.0, 3.7/6.0-3.7/18.0 inclusive.

MM 3.7/22.0 Maintain a minimum buffer (at least 100 feet) around breeding sites of the red-legged frog, California tiger salamander and the western pond turtle identified by MM 3.7/20.0.

MM 3.7 /23.0 Maintain a natural open space zone (Golden Eagle Protection Zone) around the golden eagle nest located in the northeast corner of the planning area. Exceptions to this setback will have to be approved by the U.S. Fish and Wildlife Service (USFWS), based on field examinations of the site to determine what constitutes "harassment" of the eagles at this particular location. Construction within this protection zone will not be allowed unless it is determined that the eagles have ceased to use the nest site for two consecutive years as verified by the USFWS.

MM 3.7 /24.0 During the golden eagle reproductive period (July-January), an additional temporal buffer will be established within 250 feet of the Golden Eagle Protection Zone. During this period, construction and development activities will not be allowed within this temporal zone.

MM 3.7 /25.0 Partial mitigation for the loss of useable foraging habitat will be provided by MM 3.7 / 23 which establishes a Golden Eagle Protection Zone. Additional mitigation will be provided by the 571 .1 acres of Open Space and 2,672.3 acres of Rural Residential land use of the Project. Combined, the Golden Eagle Protection Zone and the 3,243.4 acres of land projected for open space protection or low intensity development would provide suitable foraging habitat.

MM 3.7/27.0 Maintain a minimum buffer (at least 300 feet) around known or those identified by pre-construction surveys (MM 3.7/20.0) nesting sites of the burrowing owl and breeding sites of the American badger during the breeding season to avoid direct loss of individuals (March – September).

Project Impacts and Mitigation Measures

(a) Substantial adverse effect on candidate, sensitive, or special status species

No New Impact. Special-status species are defined as follows:

- Species that are listed, formally proposed for listing, or designated as candidates for listing as threatened or endangered under the federal Endangered Species Act (ESA);
- Species that are listed, or designated as candidates for listing, as rare, threatened, or endangered under the California Endangered Species Act (CESA);
- Plant species on California Rare Plant Rank (CRPR) Lists 1A, 1B, and 2 in the CNPS Inventory of Rare and Endangered Plants;
- Animal species designated as Species of Special Concern or Fully Protected by the California Department of Fish and Wildlife (CDFW);
- Species that meet the definition of rare, threatened, or endangered under Section 15380 of the CEQA guidelines; and
- Species considered being a taxon of special concern by the relevant local agencies.

Special-Status Plants. Based on the results of the database search and literature review, five special-status plant species were evaluated as potentially occurring in the site vicinity (Table F). No special-status plants are likely to occur on the site due to the lack of suitable habitat.

Special-Status Wildlife. Based on the results of the data base search, literature review and the reconnaissance-level field surveys, 25 special-status wildlife species were evaluated for the project area (Table F). Of these species, the following were determined to be present or potentially present on the project site due to the presence of suitable habitat. These species are further discussed below.

- Monarch butterfly (*Danaus plexippus*; Candidate Federally Listed)
- Western bumble bee (*Bombus occidentalis*; Candidate State Listed)
- Crotch bumble bee (*Bombus crotchii*; Candidate State Listed)
- California red-legged frog (CRLF; *Rana draytonii*; Federally Threatened, California Species of Special Concern)
- California tiger salamander (CTS; *Ambystoma californiense*; Federally and State Threatened)

Table F: Special-Status Species Evaluated for the Project

Species	Status ¹	Habitat/Blooming Period	Discussion
PLANTS			
<i>Centromadia parryi</i> ssp. <i>congdonii</i> Congdon's tarplant	1B	Grazed and ungrazed annual grassland. Alkaline or saline soils sometimes described as heavy white clay (saline clay soil). Elevation: 1-230 m. Blooms: May–October.	No potential to occur. Not likely to occur due to lack of suitable alkaline or saline substrates and prior disturbance at the site. The closest CNDDDB occurrence (#91) is approximately 0.12 mile west of the site, on the west side of Tassajara Road.
<i>Extriplex (Atriplex)</i> <i>joaquinana</i> San Joaquin spearscale	1B	Chenopod scrub, meadows and seeps, playas, valley and foothill grassland/alkaline. Elevation: 1-835 m. Blooms: April–October.	No potential to occur. Not likely to occur due to lack of habitat. The closest CNDDDB occurrence (#98) is approximately 1.1 miles from the site.
<i>Helianthella castanea</i> Diablo helianthella	1B	Rocky soils in chaparral/oak woodland interface. Elevation: 60-300 m. Blooms: March–June.	No potential to occur. Not likely to occur due to lack of suitable chaparral/oak woodland habitat. The closest CNDDDB occurrence (#94) is approximately 3.2 miles from the site.
<i>Navarretia prostrata</i> Prostrate vernal pool navarretia	1B	Wetlands in coastal sage scrub and wetland riparian habitat. Elevation: 15-40 m. Blooms: April–July.	No potential to occur. Not likely to occur due to lack of suitable habitat. The closest CNDDDB occurrence (#61) is approximately 1.7 miles from the site.
<i>Trifolium hydrophilum</i> Saline clover	1B	Wetlands and riparian habitat. Elevation: 0-45 m. Blooms: April–June.	No potential to occur. Not likely to occur due to lack of suitable habitat. The closest CNDDDB occurrence (#7) is a possibly extirpated record approximately 1.5 miles from the site.
ANIMALS			
Fish			

Species	Status¹	Habitat/Blooming Period	Discussion
Steelhead (central California coast DPS) <i>Oncorhynchus mykiss</i>	FT	Anadromous. Coastal streams from Russian River south to Aptos Creek (Santa Cruz Co.), including streams tributary to San Francisco and San Pablo Bays.	<u>No potential to occur.</u> No suitable habitat present. Tassajara Creek and its tributaries do not provide suitable salmonid habitat. ¹⁸
BRACHIOPODS			
Conservancy fairy shrimp <i>Branchinecta conservatio</i>	FE	Short-lived alkaline pools and ephemeral drainages.	<u>No potential to occur.</u> No suitable habitat present. Off-site ponded area north of site does not provide suitable habitat. Not known to occur in the Project vicinity. No CNDDDB occurrences within 5 miles of the project site.
Insects			
Monarch butterfly <i>Danaus plexippus</i>	FC/ Sensitive Winter Roosting Sites	Winter roosts along the coast from northern Mendocino to Baja California, Mexico in wind-protected tree groves (eucalyptus, Monterey pine, cypress) with nectar and water sources nearby. Uses milkweed (<i>Asclepias</i> spp.) as host plants.	<u>Low potential to occur.</u> No suitable overwintering roost sites present, but species could briefly forage in ruderal vegetation. No milkweed (<i>Asclepias</i> spp.) host plants observed during prior surveys. No CNDDDB occurrences within 5 miles of the project site.
Western bumble bee <i>Bombus occidentalis</i>	Candidate SE	Variety of habitat types supporting native flowering plants. Species has declined precipitously, perhaps from disease.	<u>Low potential to occur.</u> Low quality habitat present at the project site due to limited native flowering plants. The closest CNDDDB occurrence (#230) is a 1932 and 1951 record approximately 3.4 miles from the site.
Crotch bumble bee <i>Bombus crotchii</i>	Candidate SE	Variety of habitat types supporting native flowering plants. Species has declined precipitously, perhaps from disease.	<u>Low potential to occur.</u> Low quality habitat present at the project site due to limited native flowering plants. The closest CNDDDB occurrence (#17) is a 1932 record approximately 3.4 miles from the site.
Amphibians and Reptiles			
California red-legged frog <i>Rana draytonii</i>	FT/SSC	Ponds, streams, drainages and associated uplands; requires areas of deep, still, and/or slow-moving water for breeding	<u>Low potential to occur.</u> Suitable breeding habitat occurs in Tassajara Creek and tributary adjacent to site, but existing barrier fencing would likely preclude species from occurring. The closest CNDDDB occurrence is a 2016 record (#278) from Tassajara Creek and Moller Creek drainage approximately 0.01 mile from the site.

¹⁸ Leidy, R.A., G.S. Becker, B.N. Harvey. 2005. Historical Distribution and Current Status of Steelhead/Rainbow Trout (*Oncorhynchus mykiss*) in Streams of the San Francisco Estuary, California. Center for Ecosystem Management and Restoration, Oakland, CA.

Species	Status¹	Habitat/Blooming Period	Discussion
California tiger salamander <i>Ambystoma californiense</i>	FT/ST	Breeds in vernal pools, ponds, and stock ponds. Spends summer and early fall in uplands surrounding breeding sites, taking refuge in small mammal burrows or other underground cover.	<u>Low potential to occur.</u> Poor quality upland habitat present, but existing houses along the western boundary and the existing barrier fencing to the south would likely preclude species from occurring. The closest CNDDB occurrence (#371) of an extant breeding record is west of Tassajara Road at a seasonal pond approximately 1.2 miles from the site.
Western pond turtle <i>Emys marmorata</i>	SSC	Ponds, streams, drainages, and associated uplands.	<u>Low potential to occur.</u> Suitable habitat present in Tassajara Creek and tributary adjacent to site, but existing barrier fencing would likely preclude species from occurring. The closest CNDDB occurrence is a 2000 record (#246) approximately 0.1 mile from the site in Tassajara Creek.
Alameda striped racer (=whipsnake) <i>Masticophis lateralis euryxanthus</i>	FT/ST	Chaparral and sage scrub with rock outcrops and an abundance of prey species such as western fence lizard (<i>Sceloporus occidentalis</i>).	<u>Low potential to occur.</u> Not likely to occur due to lack of chaparral and scrub at or adjacent to the project site. Marginally suitable habitat (grasslands) present, however it is not combined with scrub stands, an important feature. This species would not likely occur. The closest CNDDB occurrence is a possibly extirpated record from 1991 (#39) approximately 4.5 miles from the site.
Birds			
Short-eared owl <i>Asio flammeus</i>	SSC	Open grasslands, meadows, and marshes with few trees. Requires dense ground vegetation for both roosting and nesting.	<u>Low potential to occur.</u> Poor quality nesting and foraging habitat present. No CNDDB occurrences within 5 miles of the project site.
Burrowing owl <i>Athene cunicularia</i>	SSC	Open habitats (e.g., grasslands, agricultural areas) with mammal burrows or other features (e.g., culverts, pipes, debris piles) suitable for nesting and roosting.	<u>Moderate potential to occur.</u> May breed and/or winter on the site. Ground squirrel burrows observed on site, but dense cover of surrounding ruderal vegetation may preclude use. The closest CNDDB occurrence is a 2008 record (#1233) approximately 0.9 mile from the site.
White-tailed kite <i>Elanus leucurus</i>	CFP	Open grasslands, meadows, or marshes. Require dense-topped trees or shrubs for nesting and perching.	<u>Moderate potential to occur.</u> Suitable nesting habitat present in large trees and shrubs and suitable foraging habitat present. The closest CNDDB occurrence (#81) is approximately 1.3 miles from the site.
Northern harrier <i>Circus hudsonius</i>	SSC	Nests in wet meadows and marshes, forages over open grasslands and agricultural fields.	<u>Low potential to occur.</u> Suitable foraging and nesting habitat present, but small size and proximity of human disturbance may preclude nesting. The closest CNDDB occurrence (#27) is approximately 2 miles from the site.

Species	Status¹	Habitat/Blooming Period	Discussion
Golden eagle <i>Aquila chrysaetos</i>	CFP	Forages in rolling foothill or coast-range terrain, with open grassland and scattered large trees. Nests in large trees, on cliffs, and occasionally on power line poles.	<u>High potential to occur.</u> No suitable nesting habitat present on-site, but species known to regularly nest in eucalyptus grove east of site (LSA pers. obs.). Species may fly or forage over the site. Species observed flying east of site and inactive stick nests observed in eucalyptus grove during reconnaissance-level field survey. The closest CNDDB occurrence (#84) is approximately 1.7 miles from the site.
American peregrine falcon <i>Falco peregrinus anatum</i>	CFP	Forages in open country, mountains, and sea coasts. Nests on high cliffs, bridges, and buildings.	<u>Moderate potential to occur.</u> No suitable nesting habitat present, but species may briefly fly or forage over the site. CNDDB occurrences suppressed by CDFW.
Loggerhead shrike <i>Lanius ludovicianus</i>	SSC	Grasslands and open shrub or woodland communities. Nests in dense shrubs or trees and forages in scrub, open woodlands, grasslands, and croplands. Frequently uses fences, posts, and utility lines as hunting perches.	<u>Moderate potential to occur.</u> Suitable nesting and foraging habitat present at the project site. No CNDDB occurrences within 5 miles of the project site.
Vaux's swift <i>Chaetura vauxi</i>	SSC	Grasslands and agricultural fields; nests in dense vegetation in large hollow trees near open water; forages in most habitats but prefers rivers and lakes.	<u>Low potential to occur.</u> No suitable roosting or nesting habitat present, but could fly or forage over the site during migration. Species not tracked in the CNDDB.
Grasshopper sparrow <i>Ammodramus savannarum</i>	SSC	Grasslands with coyote brush and other shrubs.	<u>Low potential to occur.</u> No suitable grassland habitat present. Species not tracked in the CNDDB.
Tricolored blackbird <i>Agelaius tricolor</i>	ST, SSC	Breeds in large colonies near freshwater, preferably emergent wetland such as cattails and tules but also in thickets of willow and other shrubs. Requires nearby foraging areas with large numbers of insects.	<u>Low potential to occur.</u> May forage on site during the winter, but no suitable nesting habitat present. The closest CNDDB occurrence (#226) is 1990s record, which is possibly extirpated, approximately 1.9 miles from the site.
Mammals			
Townsend's western big-eared bat <i>Corynorhinus townsendii</i>	SSC	Found in wooded areas with caves or old buildings for roost sites.	<u>Low potential to occur.</u> No suitable roosting and hibernating habitat present, but could forage over the site. No CNDDB occurrences within 5 miles of the project site.
Pallid bat <i>Antrozous pallidus</i>	SSC	Roosts in caves, tunnels, buildings, under bridges, and in tree hollows; forages over variety of habitats.	<u>Moderate potential to occur.</u> Suitable roosting habitat may be present in trees adjacent to site; this bat could occasionally occur as a transient while foraging at night. No trees with large hollows observed during the field survey. The closest CNDDB occurrence (#331) is approximately 3.9 miles from the site.

Species	Status ¹	Habitat/Blooming Period	Discussion
Western red bat <i>Lasiurus blossevillii</i>	SSC	Often roosts and forages on or near riparian habitat. Roosts primarily in trees, 2-40 feet above ground, from sea level up through mixed conifer forests. Prefers habitat edges and mosaics with trees that are protected from above and open below with open areas for foraging. Does not breed in the San Francisco Bay Area.	<u>Moderate potential to occur.</u> Suitable roosting habitat present in trees adjacent to site and suitable foraging habitat present, but species does not breed in the area. No CNDBB occurrences recorded within 5 miles of the project site.
San Joaquin kit fox <i>Vulpes macrotis mutica</i>	FE/ST	Found in open grasslands and arid areas with ground squirrel and/or kangaroo rat populations. Dens in rodent burrows.	<u>Very Low potential to occur.</u> Limited foraging and denning habitat; species is very rare in the region. This species was recorded in the mid-1970s (CNDBB occurrence #1031), denning at an unknown location near Tassajara Creek Regional Park in San Ramon.
American badger <i>Taxidea taxus</i>	SSC	Grassland, scrub, and woodland with loose-textured soils.	<u>Low potential to occur.</u> Unlikely to occur due to the small size of grassland habitat present and limited prey. The closest CNDBB occurrence (#349) is approximately 0.3 mile from the site.

¹Status Codes:

FE = federally endangered

FT = federally threatened

FC = federal candidate

SE = State endangered

ST = State threatened

1B = California Rare Plant Rank (CRPR) 1B (plants rare, threatened, or endangered in California and elsewhere)

SSC = California Species of Special Concern

CFP = California Fully Protected Species

²DPS = distinct population segment

- Western pond turtle (*Emys marmorata*; California Species of Special Concern)
- Burrowing owl (*Athene cunicularia*; California Species of Special Concern)
- Northern harrier (*Circus hudsonius*; California Species of Special Concern)
- White-tailed kite (*Elanus leucurus*; California Fully Protected Species)
- Golden eagle (*Aquila chrysaetos*; California Fully Protected Species)
- Pallid bat (*Antrozous pallidus*; California Species of Special Concern)
- Western red bat (*Lasiurus blossevillii*; California Species of Special Concern)

None of the remaining species are likely to occur due to a lack of habitat (e.g., tidal marsh, wetlands, scrub) or rarity of the species.

The proposed project would result in the loss of ruderal grassland habitat within the project site. Special-status wildlife species could be impacted both directly and indirectly during construction activities after construction has been completed. The potential for protected resources to be impacted by construction of the proposed project are a function of the likelihood the species is present when the project is constructed, as well as the type and duration of construction activities. Another factor is the sensitivity of the species or resource to disturbance. For example, roosting bats may not react to construction activities near roosts during the day, whereas a raptor may abandon its nest if construction is within 100 feet from the nest. The following discussion addresses direct and indirect impacts to special-status wildlife species from project-related construction activities as well as potential impacts to special-status wildlife species from use of the project site.

Monarch Butterfly. The monarch butterfly is a federal Candidate listed species that could feed on flowering plants and/or breed at the site if milkweed (*Asclepias* spp.) is present. The project site is outside of the known overwintering range for this species, and therefore, monarchs would not overwinter at the project site. Monarch butterflies breed from June to September and require their obligate larval host plant, milkweed, for laying eggs, larval development, and metamorphosis. This species utilizes other flowering species for nectaring during the breeding season.

The project site does not support suitable habitat for wintering monarch butterflies, and therefore, winter roosts (which are considered sensitive by CDFW) would not be impacted by the proposed project. Due to prior disturbance at the site, milkweed plants are unlikely to occur at the site. If present, milkweed could be used by breeding monarchs, related impacts would be less than significant due to the small likelihood of monarchs to occur, and because winter roosts would not be disturbed.

Western and Crotch Bumble Bee. The western bumble bee and Crotch bumble bee are Candidate State Endangered listed species. These species are known to occur in grassland and scrub habitat where suitable native nectar plants are present. These species historically occurred in the region but are considered rare and no records have been recorded near the site.¹⁹ Western and Crotch bumble bee specimens were collected in 1932 and 1952 at an unknown location in Pleasanton, approximately 3.4 miles from the site.²⁰ Due to the lack of native flowering plant species at the site and their current rarity in the area, these species are unlikely to occur at the site.

California Tiger Salamander and California Red-Legged Frog. California tiger salamander (CTS) is a federal and State threatened species that is known to occur in the area. This species breeds in vernal pools and seasonal wetlands and uses grasslands as upland habitat. Numerous occurrences have been recorded within 5 miles of the site, with the closest being an adult and breeding pond approximately 0.1 mile from the site, on the western side of Tassajara Road. The existing houses along the western boundary, the school along the northern boundary, and the barrier fencing along the southern boundary would likely preclude this species from occurring. CTS, however, could access the site from the eastern boundary, but the limited suitable grassland habitat on the site likely precludes its occurrence. The project would install barrier fencing along the eastern boundary to keep CTS from accessing the site during and after construction of the project.

California red-legged frog (CRLF) is a federally threatened species and California Species of Special Concern that occurs in and along freshwater marshes, streams, ponds, and other semi-permanent water sources. CRLF have been observed in Tassajara Creek and within the Moller Creek drainage in close proximity to the site.²¹ This species could use the off-site tributary and Tassajara Creek as breeding or non-breeding aquatic habitat. CRLF could disperse through the site, but the houses along the western boundary, the school to the north, and the barrier fencing to the south likely cause barriers for this species. Alternatively, dispersing CRLF would more likely disperse through the tributary and riparian woodland to the south.

CRLF and CTS are unlikely to occur on the project site due to the degraded nature of the site and the presence of the barrier wall that was installed specifically to prevent CRLF and CTS from entering the site. A 6-foot-high chain link fence with a 3.5-foot-high sheet metal barrier along its base was constructed along the southern site boundary. The sheet metal barrier was specifically installed to prevent wildlife from moving from the adjacent Northern Drainage Conservation Area riparian corridor onto the site.

Evaluation of the Petition from the Xerces Society, Defenders of Wildlife, and the Center for Food Safety to List Four Species of Bumble Bees as Endangered Under the California Endangered Species Act. State of California, Natural Resources Agency. Report to the Fish and Game Commission. April 4.

²⁰ CDFW. 2022, op. cit.

²¹ CDFW, 2023.

No suitable breeding habitat for CRLF or CTS exists in the Northern Drainage Conservation Area west of Fallon Road. The creek adjacent to the project site has an ephemeral to intermittent flow depending on the rainfall year. No deep pools that could provide habitat for long-term occupancy or breeding by either species was observed in the tributary. However, both CRLF and CTS are known to be present in the upstream reach of this drainage east of Fallon Road.

The barrier wall that defines the southern boundary of the property and separates the degraded project site conditions from the adjacent riparian corridor acts as a barrier to the movement of terrestrial species. The location of this wall is fixed by the permit conditions that established the NDCA and would remain in place. The buffer needed to separate site activities from wildlife use of the tributary is established by the barrier wall and is not a function of distance, which most buffers are based on. The requirement for the project to construct a secondary barrier wall along the eastern property line would further buffer project activities from the adjacent riparian corridor.

The tributary and associated riparian woodland provide suitable habitat for foraging, resting, and possibly breeding (if suitable plunge pools are present) for CRLF. Ponds and pools that are suitable for CRLF breeding usually have a minimum depth of 20 inches, but CRLF do sometimes breed successfully in pools as shallow as 10 inches.²² Regardless of water depth, suitable breeding habitat must contain water during the entire development period for eggs and tadpoles, which is considered to be around 5 months during the winter and spring. Also, CRLF from nearby locations in Tassajara Creek are unlikely to disperse through the site due to the existing barrier along the southern boundary and the intervening houses and school, which are unsuitable as foraging or movement habitat and form a barrier to dispersal from occupied habitat.

The proposed project would result in the conversion of upland habitat potentially used by these species. Given that this species can still disperse around the site, a large amount of surrounding habitat is present, the project would not create a barrier to movement, and the project would not affect expected breeding habitat, impacts associated with habitat loss/conversion would be less than significant.

However, the proposed project could result in construction-related direct and indirect impacts to CRLF and CTS, which are known to occur near the site. Grading and other construction activities could result in mortality or harm if individual CRLF or CTS using burrows, soil crevices, or other retreats within the project site. Migrating CRLF or CTS may also seek refuge under construction equipment and in excavations and trenches, exposing them to potential harm from other construction activities. In the absence of avoidance and minimization measures, spills of oil or fuel from construction equipment could impact habitat for these species and food-related trash left on the construction site could attract additional predators, leading to

²² Fellers. 2005. *Rana draytonii* Baird and Girard 1852, California Red-Legged Frog. In M. Lannoo (ed.), *Amphibian Declines: The Conservation Status of United States Species*. Volume 2, pp. 552-554. University of California Press, Berkeley.

increased predation pressure on these species. Therefore, construction-related direct and indirect impacts are potentially significant. The proposed project would be required to implement Mitigation Measures 3.7/20.0 through 3.7/22.0, as identified in the Eastern Dublin EIR. Implementation of these measures would reduce potential direct impacts to CRLF and CTS to a less-than-significant level by requiring pre-construction surveys and establishment of a buffer around identified breeding sites for these species.

Western Pond Turtle. The western pond turtle is a California Species of Special Concern. Pond turtles use permanent or nearly permanent water bodies in a variety of habitats. They can be found in ponds, marshes, rivers, streams, and irrigation ditches within grasslands, woodlands, and open forests. Basking sites such as logs, rocks, mats of floating vegetation, or open mud banks are necessary for thermoregulation. Upland areas, frequently in grassland, are used for egg laying. Pond turtles could pass through the site, especially when water is present within the adjacent tributary. Pond turtles have been recorded approximately 0.1 mile of the site in Tassajara Creek.²³ Pond turtles could occur in the tributary and riparian woodland south of the project site.

The proposed project could result in direct and indirect impacts to western pond turtle. No construction activities are proposed within ponds or pools providing suitable habitat for this species. However, western pond turtle could occur in the tributary and adjacent uplands and could nest along the banks of the tributary or adjacent riparian or grassland habitat (known as communal/traditional nesting areas). Therefore, grading and other construction activities could result in mortality or harm of individual western pond turtles. In the absence of avoidance and minimization measures, spills of oil or fuel from construction equipment could impact habitat for this species and food-related trash left on the construction site could attract additional predators, leading to increased predation pressure on the species. Therefore, construction-related direct and indirect impacts are potentially significant. The proposed project would be required to implement Mitigation Measures 3.7/20.0 through 3.7/22.0, as identified in the Eastern Dublin EIR. Implementation of these measures would reduce potential direct impacts to western pond turtle to a less-than-significant level by requiring pre-construction surveys for western pond turtle and establishment of a buffer around identified breeding sites for western pond turtle.

Burrowing Owl. Burrowing owl is a California Species of Special Concern that occurs in open, well-drained grasslands with abundant small mammal burrows, particularly those of California ground squirrels. Burrowing owls also prefer areas with short vegetation so they can easily scan their surroundings and spot potential predators.²⁴ The closest CNDDDB occurrence is a 2008 record of an occurrence approximately 0.9 mile from the site.²⁵ The presence of ground squirrel burrows and low grass height in some areas provide suitable habitat conditions for the species,

²³ CDFW. 2023. op. cit.

²⁴ Zarn, M., 1974. Burrowing owl (*Speotyto cunicularia hypugaea*). Habitat Management Series for Unique or Endangered Species, Technical Report T-N-250. Bureau of Land Management, Denver, Colorado.

²⁵ CDFW. 2023, op. cit.

which could winter or nest at or near the site. No owls or sign of their presence were observed during the reconnaissance survey, but burrowing owls may nest and/or winter within the grasslands in the project area.

Construction-related activities could result in loss or abandonment of an active burrowing nest through direct disturbance of an occupied burrow or through noise, vibration, or visual disturbance. In addition, construction-related activities could result in harm to wintering burrowing owls, should they occur in or near the construction area. The proposed project would be required to implement Mitigation Measures 3.7/20.0 and 3.7/27.0, as identified in the Eastern Dublin EIR. Implementation of these measures would reduce potential impacts to burrowing owl to a less-than-significant level by requiring pre-construction surveys for burrowing owl and establishment of a buffer around identified burrowing owl nests.

Northern Harrier, White-tailed Kite and Other Nesting Birds The northern harrier is a California Species of Special Concern that occurs in grasslands, fields, marshes, and meadows. This raptor could nest in the grasslands and/or ruderal habitat at or near the site.

The white-tailed kite is a California Fully Protected Species. This species nests in trees or large shrubs with dense foliage located near suitable foraging habitat (e.g., grasslands, marshes, agricultural fields). Preferred prey includes voles and mice. Although no nests were observed during the reconnaissance survey, the numerous trees near the site provide suitable nest sites and foraging habitat is present in the ruderal grasslands.

The proposed project has the potential to impact other special-status birds, such as short-eared owl, northern harrier, white-tailed kite, and loggerhead shrike, and other nesting birds protected by the MBTA and/or California Fish and Game code, either directly from removing the nest or indirectly from noise or human presence during construction of the project. Breeding seasons vary from year to year depending on the species, weather, and other conditions, but nesting birds could be disturbed anytime from February through August. Within the project area, birds may nest in trees, shrubs, grasslands, bare ground, and on manmade structures and equipment. Breeding birds are most likely to abandon nests early in the nest cycle. If the young birds are forced to fledge early, they could be subject to predation or starvation, which could result in reproductive failure.

Project contract specifications (as stipulated in the conditions of approval) would stipulate that vegetation removal should occur outside of the nesting season, if possible, which is typically January 1 through September 15. If vegetation removal or construction activities during the nesting season are not avoidable, project contract specifications would stipulate that, in compliance with the MBTA and the California Fish and Game Code, the project applicant should retain a qualified biologist to conduct a pre-construction survey within 36 hours prior to construction activities. The survey area should include the proposed construction site and surrounding habitat areas that could be indirectly impacted by increased noise and vibration. If active bird nests are observed within the direct and/or indirect disturbance limits, the qualified biologist should identify an appropriately sized exclusion zone around the nest in which no work would be allowed until the qualified biologist determines that the nest is no longer active.

In addition, the proposed project would be required to implement Mitigation Measure 3.7/20.0, as identified in the Eastern Dublin EIR, which requires a pre-construction survey for sensitive species prior to project construction. Compliance with the requirements of the MBTA and California Fish and Game Code and implementation of Mitigation Measure 3.7/20.0 identified in the Eastern Dublin EIR would ensure that the proposed project would result in less-than-significant impacts to northern harrier, white-tailed kite, and other nesting birds.

Golden Eagle. The golden eagle is a California Fully Protected Species. This species typically nests in sheltered groves of tall trees. A large stick nest, which has been used by nesting golden eagles, was observed approximately 200 feet to the east in the eucalyptus grove during the reconnaissance survey. This nest has been used by golden eagles for several years based on observations by LSA biologists. A golden eagle was observed flying north of the eucalyptus grove during the reconnaissance survey, suggesting that this nesting territory is likely active.

The proposed project has the potential to indirectly impact the adjacent golden eagle nest due to noise or human presence during construction of the project. The current nest is situated approximately 200 feet from the site within an offsite eucalyptus grove. This nest could be disturbed during construction activities anytime from February through June, but due to the nest's location within close proximity to a school, these nesting birds are likely habituated to ongoing disturbance. The eagles are most likely to abandon nests early in the nest cycle. If the young birds are forced to fledge early, they could be subject to predation or starvation, which could result in reproductive failure. Implementation of Mitigation Measure 3.7/20.0, and Mitigation Measures 3.7/23 through 3.7/26.0, identified in the Eastern Dublin EIR and listed above, would reduce potential impacts to golden eagle to a less-than-significant level by requiring that preconstruction surveys are conducted and that construction activities are prohibited within the buffer zone during the nesting season.

With implementation of Mitigation Measure 3.7/20.0 and Mitigation Measures 3.7/23.0 through MM 3.7/26.0 identified in the Eastern Dublin EIR and listed above, potential impacts to golden eagle would be reduced to a less-than-significant level.

Pallid Bat and Western Red Bat. The pallid bat and western red bat are a California Species of Special Concern that could roost and/or forage within the site. Pallid bats roost in caves, tunnels, and occasionally buildings and hollow trees. Western red bat typically roosts in riparian trees and forages in or near riparian habitat. Suitable roosting habitat may be present in the structures and larger trees on and adjacent to the site. No bat roosts or signs of roosting bats were observed in any of the onsite structures during the reconnaissance-level survey.

Bats, including special-status bats, such as the pallid bat and western red bat, could roost in the structures and large trees in the project area and forage on the project site. Roosting bats could be disturbed, killed, or injured by tree removal activity, if present in construction areas. Trees may be trimmed or removed. Disturbance of roosting special-status bats would be a potentially significant impact. All bats are protected from take as non-game mammals under Section 4150 of the California Fish and Game Code. Therefore, to ensure compliance with Section 4150 of the California Fish and Game Code, project contract specifications as stipulated in the conditions of

approval) should stipulate that the project applicant retain a qualified biologist to conduct a pre-construction survey for roosting bats within a week prior to tree removal or trimming activities. If maternity roosts or nonvolant (flightless) bats are found to be roosting in trees or other areas subject to direct or indirect project disturbance, a protective buffer should be established wherein no project activities will take place until the qualified biologist confirms that roosting and nonvolant bats are absent. The qualified biologist will monitor any tree trimming activities. In addition, the proposed project would be required to implement Mitigation Measure 3.7/20.0, as identified in the Eastern Dublin EIR, which requires a pre-construction survey for sensitive species prior to project construction. Compliance with the requirements of the California Fish and Game Code and implementation of Mitigation Measure 3.7/20.0 identified in the Eastern Dublin EIR would ensure that the proposed project would result in less-than-significant impacts to pallid bat and western red bat.

Conclusion. As indicated above, due to the site's proximity to open space lands that are part of the Northern Drainage Conservation Area (NDCA) and the unnamed tributary of Tassajara Creek, implementation of the proposed project has the potential to adversely affect candidate, sensitive, or special status species, resulting in potentially significant impacts. Implementation of the mitigation measures identified in the Eastern Dublin EIR and listed above, would be required to reduce potential impacts to special-status species. With implementation of the mitigation measures identified in the Eastern Dublin EIR and compliance with the MBTA and California Fish and Game Code, impacts to special-status species would be reduced to a less-than-significant level.

The project does not propose substantial changes that were not previously analyzed in the Eastern Dublin EIR that would require major changes to the Eastern Dublin EIR. Based on the information in the Eastern Dublin EIR and this environmental analysis, there would be no new impacts to special-status species other than what has been analyzed in the previous Eastern Dublin EIR, and no other CEQA standards for supplemental review are met. Therefore, no further environmental review is required.

(b) Substantial adverse effect on any riparian habitat or other natural community

No New Impact. CDFW tracks the occurrences of natural plant communities that are of limited distribution Statewide or within a county or region and are often vulnerable to environmental effects of projects. A Manual of California Vegetation, Second Edition, lists vegetation alliances with State rarity rankings of S1-S3 as considered "highly imperiled" and project impacts to "high-quality occurrences" of these alliances could be considered significant under CEQA. Most types of wetlands, including alkali wetlands, and riparian communities are also considered sensitive natural communities due to their limited distribution in California. The CNDB does not identify any sensitive natural communities on the site and no sensitive plant communities were observed during the reconnaissance-level survey. However, riparian woodland occurs along the southern boundary of the project site within the 20-foot setback from the top of the creek bank. This area would be preserved as part of the proposed project. No other riparian habitat is present on the project site; therefore, the proposed project would not have a substantial adverse effect on any riparian habitat or other natural community as no such

community occurs within the development footprint. Further, implementation of Mitigation Measures 3.7/6.0, 3.7/9.0, 3.7/14.0, and 3.7/17.0 identified in the Eastern Dublin EIR and listed above, which require preservation of riparian corridors, maintenance of natural stream channels, and implementation of erosion and sedimentation control and construction during the dry season, would ensure that impacts to these features would be reduced to a less than significant level. The project does not propose substantial changes that were not previously analyzed in the Eastern Dublin EIR that would require major changes to the Eastern Dublin EIR. Based on the information in the Eastern Dublin EIR and this environmental analysis, there would be no new impacts to riparian habitat other than what has been analyzed in the previous Eastern Dublin EIR, and no other CEQA standards for supplemental review are met. Therefore, no further environmental review is required.

(c) Substantial adverse effect on wetlands

No New Impact. The project site does not contain any wetlands or other jurisdictional features. A tributary to Tassajara Creek is situated just south of the site, while a ponded potential seasonal wetland was observed just east of the site. However, the proposed project would avoid impacts to these features as these features do not occur within the development footprint. Further, implementation of Mitigation Measures 3.7/6.0, 3.7/9.0, 3.7/14.0, and 3.7/17.0 identified in the Eastern Dublin EIR and listed above, which require preservation of riparian corridors, maintenance of natural stream channels, implementation of erosion and sedimentation control and construction during the dry season, would ensure that impacts to these features would be reduced to a less than significant level. Therefore, the proposed project would not have a substantial adverse effect on wetlands. The project does not propose substantial changes that were not previously analyzed in the Eastern Dublin EIR that would require major changes to the Eastern Dublin EIR. Based on the information in the Eastern Dublin EIR and this environmental analysis, with adherence to applicable regulatory requirements and mitigation measures identified in the Eastern Dublin EIR, there would be no new impacts to wetlands other than what has been analyzed in the previous Eastern Dublin EIR, and no other CEQA standards for supplemental review are met. Therefore, no further environmental review is required.

(d) Interfere or impede the movement of migratory fish or wildlife

No New Impact. Wildlife movement includes migration (i.e., usually annual roundtrip), inter-population movement (i.e., long-term genetic flow), and small travel pathways (i.e., daily movement corridors within an animal's territory). While small travel pathways usually facilitate movement for daily home range activities such as foraging or escape from predators, they also provide connection between outlying populations and the main corridor, permitting an increase in gene flow among populations. In the San Francisco Bay Area, landscape elements that facilitate local and/or regional wildlife movement include stream drainages, canyons, ridges, or other prominent natural or man-made landscape features.

The proposed project would not substantially interfere with wildlife movement or corridors. Because of the existing school north of the project site and the houses along the western boundary, the extent of terrestrial or amphibian wildlife movement under existing conditions is

limited and would not be affected by development of the proposed project. The riparian woodland and tributary provide a wildlife movement corridor, but the riparian woodland and intermittent tributary would be preserved as part of project implementation; therefore, wildlife that currently move through this corridor would continue to do so after project construction. Wildlife that currently move through the site would likely continue to move through the site during and after construction of the project since most of the species that occur in the area are generalists that are adept at moving through urban landscapes. Therefore, impacts to wildlife movement corridors would be less than significant.

The project site does not contain native wildlife nursery sites, such as heron rookeries or salmonid spawning areas. Any bat roosts or bird nests would be protected by implementing Mitigation Measure 3.7/20.0 identified in the Eastern Dublin EIR and complying with the provisions of the MBTA and California Fish and Game Code.

Because the project site is already developed with an existing school and residential uses and provides limited opportunity for wildlife movement and does not support any native wildlife nursery sites, development of the proposed project would not interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors or impede the use of native wildlife nursery sites. The project does not propose substantial changes that were not previously analyzed in the Eastern Dublin EIR that would require major changes to the Eastern Dublin EIR. Based on the information in the Eastern Dublin EIR and this environmental analysis, with adherence to applicable regulatory requirements and mitigation measures identified in the Eastern Dublin EIR, there would be no new impacts to wildlife movement other than what has been analyzed in the previous Eastern Dublin EIR, and no other CEQA standards for supplemental review are met. Therefore, no further environmental review is required.

(e) Conflict with local policies or ordinance protecting biological resources, include tree preservation

No New Impact. The following discussion addresses the project's consistency with applicable local policies protecting biological resources.

Northern Drainage Conservation Area – Dublin Ranch Preserve. The project site abuts the NDCA unit of the Dublin Ranch Preserve (preserve) to the south, as described above in the Environmental Setting. The preserve was established in 2010 and is currently managed by the CNLM as habitat for CRLF, CTS, golden eagle, burrowing owl, and San Joaquin kit fox. These species are the primary ones of concern to the USFWS, CDFW, and local municipalities when evaluating potential development impacts on biological resources. None of these species are expected to occur on the site due to past and ongoing disturbance and consequent lack of habitat. CRLF are known to occur in the NDCA and could move and forage along the adjacent riparian corridor but would be prevented from moving onto the site by the sheet metal barrier at the base of the fence that parallels the southern site boundary. The riparian corridor and annual grasslands to the east are known to support CTS that potentially move through the area. The only location where they could enter the project site is along its eastern boundary, which

does not have a complete barrier fence. The NDCA has supported nesting golden eagles for many years. The current nest site is located approximately 200 feet east of the site. Given the nest's location within close proximity to the school and ongoing human disturbance, the nesting eagles are likely habituated to human activity and associated noise. Therefore, the proposed project would not result in significant disturbance of the nesting eagles. Therefore, the proposed project would not conflict with the provisions of the Northern Drainage Conservation Area.

East Alameda County Conservation Strategy. The East Alameda County Conservation Strategy (EACCS) is a collaborative document developed by multiple federal, State, and local entities (e.g., Alameda County, East Bay Regional Park District, RWQCB, CDFW, USFWS) that is intended to "provide an effective framework to protect, enhance, and restore natural resources in eastern Alameda County, while improving and streamlining the environmental permitting process for impacts resulting from infrastructure and development projects." The EACCS enables project proponents to comply with federal and State regulatory requirements within a framework of comprehensive conservation goals and objectives by implementing standardized mitigation requirements. The City of Dublin does not require private development projects to comply with the provisions of the EACCS. Therefore, the proposed project would not conflict with the provisions of the EACCS.

Dublin Municipal Code. Stream setbacks are addressed in Chapter 7.20, Article III of the City's Municipal Code (Code), which was adopted as a result of Ordinance 52-87. Section 7.20.220 states, "the purpose of setbacks is to safeguard watercourses by preventing activities that would contribute significantly to flooding, erosion, or sedimentation, would inhibit access for watercourse maintenance, or would destroy riparian areas or inhibit their restoration. Accordingly, no development shall be permitted within setbacks except as otherwise provided herein." Although the Code does not provide specific setback distances, it defines the Director of Public Works as the primary City staff member responsible for permitting limited development within setbacks and determining setback limits. Section 70.20.230 states that the Director of Public Works "may grant a permit for [limited development within a setback] provided that the above specified purpose would be satisfied. In such cases, the permit applicant shall submit sufficiently detailed plans and specifications, and any additional material required by the Director of Public Works, to demonstrate that a proposed development adjacent to an open channel watercourse would meet the requirements."

The project site is located immediately north of the unnamed tributary of Tassajara Creek, a major regional watercourse located west of the project site. The tributary was previously part of the project site but was subsequently parceled off to be restored and incorporated into a 245-acre permanent conservation easement with open space lands to the east. As described above, the Dublin Municipal Code does not provide specific setback distances; however, the proposed project would maintain a 20-foot setback from the top of the creek bank within which no development is proposed. Construction would be confined to the existing disturbed area of the site and the existing sheet metal barrier would be retained and protected during and after construction. The fence would be identified as an "Environmentally Sensitive Area" (ESA) to be

avoided during construction. Therefore, the proposed project would not conflict with Section 7.20, Article III of the City of Dublin Municipal Code.

Eastern Dublin Comprehensive Stream Restoration Program. Consistent with Mitigation Measure 3.7/12 of the Eastern Dublin EIR, the City prepared and adopted the Eastern Dublin Comprehensive Stream Restoration Program to promote the restoration, enhancement and stabilization of Tassajara Creek and its tributaries. The Eastern Dublin Comprehensive Stream Restoration Program establishes a 100-foot setback from Tassajara Creek and its major tributaries. The project site is located within 20 feet of the top of bank of a major tributary to Tassajara Creek and therefore, the existing development on the project site is located within the 100-foot setback prescribed by the Eastern Dublin Comprehensive Stream Restoration Program. The proposed project development would occur within the existing disturbance footprint on the site; therefore, implementation of the proposed project would not increase the encroachment into the stream setback. The proposed project would maintain a minimum 20-foot setback from proposed site improvements and the top of bank. Further, the existing barrier fence along the site's southern boundary would remain intact, preventing encroachment into the stream corridor. Therefore, implementation of the proposed project would not conflict with the requirements of the Eastern Dublin Comprehensive Stream Restoration Program.

City of Dublin Tree Ordinance. Chapter 5.60 of the City of Dublin Municipal Code requires a tree removal permit for impacts to heritage trees. "Heritage Tree" means any of the following:

- Any oak, bay, cypress, maple, redwood, buckeye, and sycamore tree having a trunk or main stem of twenty-four (24) inches or more in diameter measured at four (4) feet six (6) inches above natural grade;
- Any tree required to be preserved as part of an approved Development Plan, Zoning Permit, Use Permit, Site Development Review or Subdivision Map; or
- Any tree required to be planted as a replacement for an unlawfully removed tree.

If trees protected by the City of Dublin's Heritage Tree Ordinance would be impacted by proposed project, the applicant would be required to obtain a tree removal permit from the City, pay the necessary application fee, and replace impacts trees at a minimum 1:1 ratio. Compliance with the City's Heritage Tree Ordinance would ensure potential impacts related to tree removal would be less than significant. Therefore, the proposed project would not conflict with the City's Heritage Tree Ordinance.

Conclusion. Based on the information provided above, the proposed project would not conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance because the proposed development would occur within the existing disturbance footprint, would not extend into the established stream setback or the Northern Drainage Conservation Area, and would be required to obtain a tree removal permit in compliance with the City's Heritage Tree Ordinance. The project does not propose substantial changes that were not previously analyzed in the Eastern Dublin EIR that would require major

changes to the Eastern Dublin EIR. Based on the information in the Eastern Dublin EIR and this environmental analysis, with adherence to applicable regulatory requirements and mitigation measures identified in the Eastern Dublin EIR, there would be no new impacts related to conflicts with local policies or ordinance protecting biological resources other than what has been analyzed in the previous Eastern Dublin EIR, and no other CEQA standards for supplemental review are met. Therefore, no further environmental review is required.

(f) Conflict with adopted habitat conservation or natural community conservation plans

No New Impact. The proposed project is not located within any approved local, regional, or state conservation plan. Therefore, the project would not conflict with any approved local, regional, or state habitat conservation plan. The EACCS is not a habitat conservation or natural community conservation plan and the proposed project would not conflict with the policies of the EACCS because the EACCS does not apply to private projects in the City of Dublin.

The project does not propose substantial changes that were not previously analyzed in the Eastern Dublin EIR that would require major changes to the Eastern Dublin EIR. Based on the information in the Eastern Dublin EIR and this environmental analysis, there would be no new impacts related to conflict with adopted habitat conservation or natural community conservation plans other than what has been analyzed in the previous Eastern Dublin EIR, and no other CEQA standards for supplemental review are met. Therefore, no further environmental review is required.

Conclusion

The project does not propose substantial changes that were not previously analyzed in the Eastern Dublin EIR that would require major changes to the Eastern Dublin EIR. Based on the information in the Eastern Dublin EIR and this environmental analysis, the project would not substantially increase the severity of the previously identified cultural resources impacts, nor result in new significant impacts.

With adherence to applicable regulatory requirements and mitigation measures identified in the Eastern Dublin EIR, there would be no new or substantially more severe significant impacts to biological resources beyond what has been analyzed in the Eastern Dublin EIR, and no other CEQA standards for supplemental review are met. Therefore, no further environmental review is required.

Cultural Resources

ENVIRONMENTAL IMPACTS Issues	Potentially Significant Issues	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No New Impact
5. CULTURAL RESOURCES. Would the project:				
a) Cause a substantial adverse change in the significance of a historical resource pursuant to CEQA Guidelines section 15064.5?				X
b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to section 15064.5?				X
c) Disturb any human remains, including those interred outside of dedicated cemeteries?				X

Environmental Setting

CEQA defines a “historical resource” as a resource which meets one or more of the following criteria:

- Listed in, or eligible for listing in, the California Register of Historical Resources (California Register);
- Listed in a local register of historical resources as defined in Public Resources Code (PRC) Section 5020.1(k);
- Identified as significant in a historical resource survey meeting the requirements of Section 5024.1(g) of the Public Resources Code; or
- Determined to be a historical resource by a project's lead agency (PRC Section 21084.1 and State CEQA Guidelines Section 15064.5[a]).

The California Register defines a “historical resource” as a resource that meets one or more of the following criteria: (1) associated with events that have made a significant contribution to the broad patterns or local or regional history of the cultural heritage of California or the United States; (2) associated with the lives of persons important to local, California, or national history; (3) embodies the distinctive characteristics of a type, period, region, or method of construction or represents the work of a master or possesses high artistic values; or (4) has yielded, or has the potential to yield, information important to the prehistory or history of the local area, California, or the nation. Under CEQA, historical resources can include precontact (i.e., Native American) archaeological deposits, historic-period archaeological deposits, historic buildings, and historic districts.

Background research consisting of a records search at the Northwest Information Center (NWIC), a review of historical maps and aerial photographs, a search of the Sacred Lands File (SLF) at the Native American Heritage Commission (NAHC), and a review of published geological

information were conducted to determine the potential sensitivity for buried historic and archaeological sites. In addition, a Historic Resources Evaluation (HRE) was prepared to evaluate the potential significance of the existing residential building, which is over 50 years old.

A cultural resources records search was conducted on January 1, 2023, by staff at the NWIC of the California Historical Resources Information System to identify previous archaeological site records and cultural resource studies within the project site and vicinity. The NWIC, an affiliate of the Office of Historic Preservation (OHP), is the official State repository of cultural resources records and reports for Alameda County. The search encompassed the project site and surrounding 0.5-mile radius.

The project site contains a single-story, wood framed, Vernacular-styled, single-family residential building on a rectangular plan constructed in 1925 and located at the wester end of an irregularly shaped 2.64-acre parcel in a semi-rural setting. Background research indicates the residential buildings at 6327 Tassajara Road are associated with the early- to mid-20th century growth of the San Ramon Valley, northeastern Alameda County, and California. These building possesses characteristics of the Vernacular architectural style. Based on background research, including a records search, a literature review, archival research, and a field review by an architectural historian, the building's eligibility for inclusion on the California Register was evaluated in accordance with the criteria listed above. As described in the HRE, although the existing building is a typical example of the mid-20th century development of the San Ramon Valley in northeastern Alameda County and California, it is not associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage; is not associated with the life of persons important in our past; is not notable for its architectural or design qualities or as an important example of its architectural style; and is unlikely to yield information important to the history of the City of Dublin, the San Ramon Valley, Alameda County, or California. Therefore, the residence and detached shed and shop buildings are not significant under any evaluative criteria of the California Register. For these reasons, LSA concludes that the buildings at 6237 Tassajara Road do not appear eligible for inclusion in the California Register under any level of significance either individually or as part of an unidentified historic district and do not appear to qualify as historical resources for the purposes of CEQA (Public Resources Code [PRC] Section 21084.1). North of and adjacent to the project site is the Quarry Lane School, a private K-12 school at 6363 Tassajara Road. The campus contains an assemblage of buildings constructed in phases beginning circa 1982 and have not yet reached sufficient age to warrant evaluation for historical significance and inclusion in the California Register.

One previous cultural resource study overlapped the current project site, and another 18 were conducted within a half-mile radius. No archaeological resources are recorded within the project boundary. One archaeological resource was recorded within a half-mile of the project site.

A request was submitted to the NAHC to search the Sacred Lands File (SLF) for Native American cultural resources that may be impacted by the proposed project. The NAHC maintains the SLF database and is the official State repository of Native American sacred-site location records in California. The NAHC responded to the SLF search request on December 27, 2022, and stated that the results were negative and that there were no known Native American cultural resources in the project site. It was noted, however, that “the absence of specific site information in the SLF does not indicate the absence of cultural resources in any project area.”

The review of aerial photographs and historic maps indicates that the project site has been developed since prior to 1941. Tassajara Creek is less than 1,000 feet west of the project site, and an unnamed stream creates the southern boundary of the project site. Both water sources would have been a food and water source for Native American occupants of the region. Clear Lake clay deposits (which have potential to contain previously unidentified archaeological deposits) likely extend at least 60 to 65 inches deep throughout the project site.

Previous CEQA Documents

Eastern Dublin EIR

The Eastern Dublin EIR identified potentially significant impacts related to the disruption or destruction of identified and unidentified prehistoric resources, and disruption or destruction of identified and unidentified historic resources. Mitigation measures were identified to reduce potential impacts to a less-than-significant level. The following mitigation measures would apply to the proposed project:

MM 3.9/1.0 All locations of prehistoric resources will need a program of mechanical and/or hand subsurface testing to determine the presence or absence of midden deposits associated with the surface indicators of aboriginal presence.

MM 3.9/2.0 All locations containing either midden components or concentrations of cultural materials located on the surface will be recorded on State of California site survey forms. The borders of any midden deposits or concentrations of cultural materials (other than single isolated artifact discoveries) will be staked so that accurate location maps can be produced by professional survey teams.

MM 3.9/3.0 If it can be demonstrated that these recorded and mapped locations will be impacted in any manner by future construction or indirectly impacted as a result of increased access to the area, a plan of evaluative testing of each resource will have to be devised in order to prepare responsive mitigation measures. Evaluative testing will consist of the collection and analysis of any surface concentrations of cultural materials, and the hand excavation and analysis of the scientific content of any midden components discovered during present or absence testing.

MM 3.9/4.0 The City shall retain the services of a qualified archaeologist to develop a protection program for prehistoric sites which contain either a surface or subsurface

deposit of cultural materials or information which qualify under Appendix K of CEQA as “significant” and which are located in areas of the project site where development will significantly alter the current conditions of the prehistoric resource.

MM 3.9/5.0 The discovery of historic or prehistoric remains during grading and construction will result in the cessation of such activities until the significant and extent of those remains can be ascertained by a certified archaeologist.

MM 3.9/6.0 The City of Dublin will require the following series of actions as part of the application process for development in eastern Dublin: site sensitivity determination; detailed research and field reconnaissance by a certified archaeologist; development of a mitigation plan pursuant to the policies of the Eastern Dublin Specific Plan and current CEQA guidelines.

MM 3.9/7.0 All properties with historic resources, which may be impacted by future development shall be subjected to in-depth archival research to determine the significance of the resources prior to any alteration.

Project Impacts and Mitigation Measures

(a) Historic resources

No New Impact. For a cultural resource to be considered a historical resource (i.e., eligible for listing in the California Register of Historical Resources), it generally must be 50 years or older. Under CEQA, historical resources can include precontact (i.e., Native American) archaeological deposits, historic-period archaeological deposits, historic buildings, and historic districts. CEQA requires agencies considering projects that are subject to discretionary action to consider the potential impacts on cultural resources that may occur from project implementation (see CEQA Guidelines Section 15064.5).

As described above, the project site contains a single-story, wood framed, Vernacular-styled, single-family residential building on a rectangular plan constructed in 1925. The residence and associated outbuildings were evaluated for significance as a historical resource. They were found to be not eligible, either individually or as a group, for inclusion on the California Register. Although these existing buildings would be demolished as part of the proposed project, this impact would be less than significant as these buildings do not qualify as historical resources for the purposes of CEQA.

However, given the historic-period development of the project site, the proximity of the project site to water, and the types of sediments mapped in the project site, implementation of the project has potential to impact subsurface cultural resources dating to either the historic period or the precontact period. These features could be uncovered during ground disturbing activities associated with the proposed project. Implementation of Mitigation Measure 3.9/4.0 from the Eastern Dublin EIR, as modified below (with additions in double-underline and deletions in strikethrough), and Mitigation Measure 3.9/5.0 from the Eastern Dublin EIR would be implemented to reduce potential impacts to a less than significant level.

MM 3.9/4.0 The City shall retain the services of a qualified archaeologist to develop a protection program for prehistoric and/or historic-period sites which contain either a surface or subsurface deposit of cultural materials or information which qualify under Appendix K of CEQA as “significant” and which are located in areas of the project site where development will significantly alter the current conditions of the prehistoric resource. An archaeologist (either an archaeologist who meets the Secretary of the Interior’s Professional Qualifications Standards for Archaeology or an archaeologist supervised by such an archaeologist) shall monitor all ground-disturbing activities associated with project implementation in non-bedrock sediments, including clearing and grubbing activities. Archaeological monitoring shall occur on a full-time basis during these excavation activities until the Project Archaeologist, based on the archaeological monitor’s observations, is satisfied that there is little likelihood of encountering intact archaeological deposits. The Project Archaeologist may also determine it is appropriate to reduce monitoring to spot-checking on a part-time basis.

With implementation of Mitigation Measures 3.9/4.0 (as modified above) and 3.9/5.0 from the Eastern Dublin EIR, which requires archaeological monitoring and work stoppage in the event of an archaeological discovery, potential impacts to archaeological historical resources would be reduced to a less-than-significant level.

The project does not propose substantial changes that were not previously analyzed in the Eastern Dublin EIR that would require major changes to the Eastern Dublin EIR. Based on the information in the Eastern Dublin EIR and this environmental analysis, the project would not substantially increase the severity of the previously identified cultural resources impacts, nor result in new significant impacts. With adherence to applicable regulatory requirements and mitigation measures identified in the Eastern Dublin EIR, as modified above, there would be no new or substantially more severe significant impacts to historical resources beyond what has been analyzed in the Eastern Dublin EIR, and no other CEQA standards for supplemental review are met. Therefore, no further environmental review is required.

(b) Archaeological resources

No New Impact. Pursuant to CEQA Guidelines Section 15064.5(c)(1), “When a project will impact an archaeological site, a lead agency shall first determine whether the site is an historical resource.” Those archaeological sites that do not qualify as historical resources shall be assessed to determine if they qualify as “unique archaeological resources” pursuant to California Public Resource Code (PRC) Section 21083.2.

Although no archaeological resources have been identified at the project site, it cannot be entirely ruled out that archaeological cultural resources could be encountered during project construction at the project site. Should archaeological deposits be encountered during project ground disturbance, a substantial adverse change in the significance of a historical resource would occur from its demolition, destruction, relocation, or alteration such that the significance of the resource would be materially impaired (CEQA Guidelines Section 15064.5(b)(1)). If such resources are encountered, implementation of Mitigation Measure 3.9/5.0 from the Eastern Dublin EIR, which requires work stoppage in the event of an archaeological discovery, potential

impacts to archaeological would be reduced to a less-than-significant level. implementation of Mitigation Measure 3.9/5.0 as identified in the Eastern Dublin EIR would reduce any potential impacts to archaeological and/or Native American resources to a less-than-significant level. Therefore, the project does not propose substantial changes that were not previously analyzed in the Eastern Dublin EIR that would require major changes to the Eastern Dublin EIR. Based on the information in the Eastern Dublin EIR and this environmental analysis, with implementation of the mitigation measures identified in the Eastern Dublin EIR, there would be no new impact related to archaeological resources other than what has been analyzed in the previous Eastern Dublin EIR. No other CEQA standards for supplemental review are met for this impact. No additional environmental analysis is required.

(c) Human remains

No New Impact. Based on previous archaeological investigation and analysis, there is a low potential for the disturbance of archaeological cultural resources or human remains. However, in the event that human remains are encountered at any time during project work, State Health and Safety Code Section 7050.5 states that no further disturbance shall occur until the County Coroner has made a determination of origin and disposition pursuant to PRC Section 5097.98. The County Coroner must be notified of the find immediately. If the remains are determined to be Native American, the County Coroner would notify the NAHC within 24 hours. The NAHC would determine and notify a Most Likely Descendant (MLD) per PRC 5097.98. With the permission of the landowner or his/her authorized representative, the MLD may inspect the site of the discovery. The MLD shall complete the inspection and make recommendations or preferences for treatment within 48 hours of being granted access to the site. The MLD's recommendations may include scientific removal and nondestructive analysis of human remains and items associated with Native American burials, preservation of Native American human remains and associated items in place, relinquishment of Native American human remains and associated items to the descendants for treatment, or any other culturally appropriate treatment.

Compliance with Section 7050.5 of the California Health and Safety Code and PRC Section 5097.98 regarding the treatment of human remains, which requires cessation of work, notification of the County Coroner, coordination with the NAHC and the MLD and treatment of the remains in accordance with the MLD's recommendations, potential impacts to human remains would be less than significant. Therefore, the project does not propose substantial changes that were not previously analyzed in the Eastern Dublin EIR that would require major changes to the Eastern Dublin EIR. Based on the information in the Eastern Dublin EIR and this environmental analysis, with adherence to applicable regulatory requirements, there would be no new impact related to human remains other than what has been analyzed in the previous Eastern Dublin EIR. No other CEQA standards for supplemental review are met for this impact. Therefore, no further environmental review is required.

Conclusion

The project does not propose substantial changes that were not previously analyzed in the Eastern Dublin EIR that would require major changes to the Eastern Dublin EIR. Based on the

information in the Eastern Dublin EIR and this environmental analysis, the project would not substantially increase the severity of the previously identified cultural resources impacts, nor result in new significant impacts.

With adherence to applicable regulatory requirements and mitigation measures identified in the Eastern Dublin EIR, as modified above, there would be no new or substantially more severe significant impacts to cultural resources beyond what has been analyzed in the Eastern Dublin EIR, and no other CEQA standards for supplemental review are met. Therefore, no further environmental review is required.

Energy

ENVIRONMENTAL IMPACTS Issues	Potentially Significant Issues	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No New Impact
13. ENERGY. Would the project:				
a) Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?				X
b) Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?				X

Environmental Setting

Electricity

Electricity is a man-made resource. The production of electricity requires the consumption or conversion of energy resources (including water, wind, oil, gas, coal, solar, geothermal, or nuclear resources) into energy. Electricity is used for a variety of purposes (e.g., lighting, heating, cooling, and refrigeration, and for operating appliances, computers, electronics, machinery, and public transportation systems).²⁶ In 2021, California consumed approximately 280,738 gigawatt-hours (GWh) or 280,738,376,720 kWh.²⁷ Of this total, Alameda County consumed 10,237 GWh or 10,237,401,835 kWh.²⁸

Natural Gas

Natural gas is a non-renewable fossil fuel. Fossil fuels are formed when layers of decomposing plant and animal matter are exposed to intense heat and pressure under the surface of the Earth over many years. Natural gas is a combustible mixture of hydrocarbon compounds (primarily methane) that is used as a fuel source. Natural gas is found in naturally occurring reservoirs in deep underground rock formations. Natural gas is used for a variety of uses (e.g., heating buildings, generating electricity, and powering appliances such as stoves, washing machines and dryers, gas fireplaces, and gas grills).²⁹ In 2021, California consumed

²⁶ California Energy Commission, 2021. 2021 Total System Electric Generation. Website: <https://www.energy.ca.gov/data-reports/energy-almanac/california-electricity-data/2021-total-system-electric-generation> (accessed January 2023).

²⁸ Ibid.

²⁹ U.S. Energy Information Administration. 2021. Natural Gas Explained-Use of Natural Gas. Website: <https://www.eia.gov/energyexplained/natural-gas/use-of-natural-gas.php> (accessed January 2023).

approximately 11,922 million therms or 11,922,705,640 therms, while Alameda County consumed approximately 377 million therms or approximately 377,052,605 therms.³⁰

Fuel

Petroleum is also a non-renewable fossil fuel. Petroleum is a thick, flammable, yellow-to-black mixture of gaseous, liquid, and solid hydrocarbons that occurs naturally beneath the earth's surface. Petroleum is primarily recovered by oil drilling. It is refined into a large number of consumer products, primarily fuel oil and gasoline. Gasoline is the most used transportation fuel in California, with 97 percent of all gasoline being consumed by light-duty cars, pickup trucks, and sport utility vehicles. Based on fuel consumption obtained from EMFAC2021, vehicle trips in Alameda County in 2023 are anticipated to consume 152,376,810 gallons of diesel fuel and 553,890,645 gallons of gasoline.

Previous CEQA Documents

Eastern Dublin EIR

At the time the Eastern Dublin EIR was prepared, the Environmental Checklist Form (Appendix G of the CEQA Guidelines) did not include energy. Therefore, the Eastern Dublin EIR did not specifically analyze impacts to energy. Utilities and service systems impacts and mitigation measures, some of which are related to the demand for energy of additional service systems, were identified and found that the demand for utility extensions and consumption of non-renewable natural resources would result in a significant and unavoidable impact. The following mitigation measure would apply to the proposed project:

MM 3.4/46.0 Site Planning, Building Design, and Landscaping. The City shall require project applicants to demonstrate that specific site planning, building design, and landscaping measures have been incorporated into their projects to conserve the use of energy during construction and long-term operation. Such measures might include orientation of lots; buildings and windows; protection of solar access; active and passive solar applications; use of energy efficient materials; and function of landscaping. These measures will be incorporated into an energy conservation plan and shall be reviewed and approved by the City as part of specific development proposals.

Project Impacts and Mitigation Measures

(a) Wasteful consumption of energy resources

No New Impact. The Eastern Dublin EIR determined that development of the EDSP area would result in a significant and unavoidable impact due to the consumption of non-renewable natural resources, including energy consumption and therefore a Statement of Overriding Considerations was adopted for the project. Mitigation measures were identified in the Eastern Dublin EIR to minimize this impact and Mitigation Measure 3.4/46.0, as identified above, would

³⁰ California Energy Commission, 2022b. Energy Consumption Data Management Service. Gas Consumption by County. Website: www.ecdms.energy.ca.gov/gasbycounty.aspx (accessed December 2022).

apply to the proposed project. Since preparation of the Eastern Dublin EIR, the California Building Energy Efficiency Standards contained in Title 24 in the California Code of Regulations have been revised and updated to include more stringent requirements to prevent the unnecessary consumption of energy. Development on the project site would be required to comply with these standards. In addition, Chapter 7.94, Green Building, of the City of Dublin Municipal Code encourages sustainable construction in the following categories: planning and design, energy efficiency, water efficiency and conservation, materials conservation, and resource efficiency and environmental quality. Adherence to these regulatory requirements and implementation of Mitigation Measure 3.4/46.0, identified in the Eastern Dublin EIR and listed above, would ensure that the proposed project would not result in the wasteful consumption of energy resources.

The project does not propose substantial changes that were not previously analyzed in the Eastern Dublin EIR that would require major changes to the Eastern Dublin EIR. Based on the information in the Eastern Dublin EIR and this environmental analysis, with adherence to applicable regulatory requirements and mitigation measures identified in the Eastern Dublin EIR, there would be no new impacts to energy beyond what has been analyzed in the previous Eastern Dublin EIR, and no other CEQA standards for supplemental review are met. Therefore, no further environmental review is required.

(b) Conflict with local plan for renewable energy

No New Impact. The proposed project does not contain any features that would conflict with or obstruct a State or local plan for renewable energy or energy efficiency and is required to comply with state and local energy regulations, as described above.

Conclusion

The project does not propose substantial changes that were not previously analyzed in the Eastern Dublin EIR that would require major changes to the Eastern Dublin EIR. Based on the information in the Eastern Dublin EIR and this environmental analysis, with adherence to applicable regulatory requirements and mitigation measures identified in the Eastern Dublin EIR, there would be no new impacts to energy beyond what has been analyzed in the previous Eastern Dublin EIR, and no other CEQA standards for supplemental review are met. Therefore, no further environmental review is required.

Geology and Soils

ENVIRONMENTAL IMPACTS Issues	Potentially Significant Issues	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No New Impact
6. GEOLOGY AND SOILS. Would the project:				
a) Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:				
i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault?				X
ii) Strong seismic ground shaking?				X
iii) Seismic-related ground failure, including liquefaction?				X
iv) Landslides?				X
b) Result in substantial soil erosion or the loss of topsoil?				X
c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?				X
d) Would the project be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?				X
e) Would the project have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water?				X
f) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?				X

Environmental Setting

The project site is located within the Coast Range Geomorphic Province of Northern California. This province is generally characterized by northwest-trending mountain ranges and intervening valleys, which reflect the dominant northwest structural trend of the bedrock in the

region. The Calaveras Fault separates the lowlands of the Dublin Valley from the hill areas to the west. Active faults in the vicinity of the project site include the Hayward Fault, approximately 8.3 miles to the west, the Calaveras Fault, located approximately 1.8 miles to the west, and the Greenville Fault, located approximately 9.6 miles to the east. The project site is not located within a State-designated Alquist-Priolo Earthquake Fault Zone.

The project site is located at the base of a west facing hill. The ground surface is essentially level with an average elevation of 438 feet above mean sea level (msl).

Based on subsurface exploration conducted as part of the Geotechnical Investigation, soils encountered on the project site included fill, clay, silt, sand and gravel. Fill, consisting of asphalt concrete and crushed rock, was encountered near the ground surface, varying in thickness between six inches and 12 inches. Near-surface native soil consists of dark brown to black plastic clay to a depth of between three and five feet. The clay is underlain by yellowish-brown sandy and silty clay that is moist to very moist and stiff to very stiff and has occasional gravel.

Previous CEQA Documents

Eastern Dublin EIR

The Eastern Dublin EIR identified potentially significant impacts related to earthquake ground shaking, alteration of landforms, expansive soils, landslide and slope stability, and erosion and sedimentation. With the exception of the primary effects associated with seismic ground shaking, which was determined to be significant and unavoidable and therefore a Statement of Overriding Considerations was adopted for the project. All other impacts related to geology and soils would be reduced to less than significant with implementation of the mitigation measure identified in the Eastern Dublin EIR. The following mitigation measures would apply to the proposed project:

MM 3.6/1.0 The primary effects of ground shaking to structures and infrastructures can be reduced to a generally acceptable level below failure/loss of life by using modern seismic design for resistance to lateral forces in construction. Building in accordance with Uniform Building Code and applicable County and City code requirements should reduce the potential for structural failure, major structural damage, and loss of life. However, some structural damage may occur, and it is possible that some residences/structures and infrastructures will not be safe for occupation/use after a large earthquake.

MM 3.6/2.0 In relatively flat areas which can be developed with minimal grading (the southern portion of the Project site and along Tassajara and Cottonwood Creeks):

- Locate improvements off (setback from) unstable and potentially unstable landforms such as landslides, colluvium filled swales, creek banks, and steep hill slopes.
- Remove, stabilize or reconstruct potentially unstable landforms, or

- Employ modern design, including appropriate foundation design and applicable codes and policies, in the construction of improvements that must be located on potentially unstable landforms or in areas underlain by alluvium with shallow groundwater levels which could be locally susceptible to liquefaction.

MM 3.6/4.0 Engineered retention structures and surface and subsurface drainage improvement should be used as appropriate to improve the stability of sidehill fills and potentially unstable materials, particularly colluvium not entirely removed by grading.

MM 3.6/5.0 Seismically induced fill settlement can be substantially reduced if fills are properly designed with keyways and subsurface drainage, and are adequately compacted (i.e., minimum 90 percent relative compaction as defined by the American Society for Testing and Materials (ASTM) test method D1557).

MM 3.6/6.0 Design roads, structural foundations, and underground utilities to accommodate estimated settlement without failure, especially across transitions between fills and cuts. Potentially unstable stock pond embankments should be removed in development areas, unless they are reconstructed to current earthquake design standards.

MM 3.6/7.0 Final design of improvements in the Project site should be made in conjunction with a design-level geotechnical investigations and the reports should be submitted to the City of review prior to issuing any permits. These investigations should incorporate stability analysis of both natural slopes that could impact planned improvements, and planned engineered (cut and fill) slopes, assuming saturated conditions and earthquake shaking. Significant slopes should achieve a minimum factor of safety against failure of 1.5 for static conditions (where 1.0 is failure) and 1.2 under design pseudo-static earthquake loading. A displacement analysis should be performed for critical slopes to confirm the effectiveness of mitigation measures.

MM 3.6/14.0 The potential impact of expansive soils and rock with respect to Project improvements can be significantly reduced, or in many cases prevented by the recognition and characterization of site-specific conditions, and the formulation of appropriate design-level geotechnical investigation conducted for each specific proposed project.

MM 3.6/15.0 The potential for shrink and swell of expansive soils and rock can be reduced by controlling moisture and by treatment through measures listed below. Subsurface drainage alone is not generally effective against the effects of regional wet/drought cycles. Required measures for a specific project should be based on the recommendation of the project geotechnical consultant and approved by the City and include:

- Moisture conditioning prior to construction;

- Construction of surface and subsurface drainage to control infiltration after construction;
- Lime treatment, which can be used to produce non-expansive fill.

MM 3.6/16.0 The potential effects of expansive soil can be reduced by appropriate foundation and pavement design, including those design elements listed below.

- Adjustable foundation systems are not generally effective against the effects of regional wet/drought cycles and are considered undesirable because the systems require periodic maintenance, and their use should be discouraged. Appropriate design criteria should be developed by the project geotechnical consultant and approved by the City:
- Founding structural foundations below the zone of seasonal moisture change;
- Use of structurally supported floors; and
- Removal and replacement with non-expansive fill beneath structure slabs and asphaltic concrete.

MM 3.6/27.0 The potential impacts of short-term construction-related erosion and sedimentation can be reduced by timing grading activities to avoid the rainy season as much as possible, and by implementing one or more of the following interim control measures, which are designed to prevent concentration of runoff, control runoff velocity, and trap silt. Required measures for a specific project will be determined by the City and be a requirement of the grading permit.

- Water bars;
- Mulch-and-net blankets on exposed slopes;
- Straw bale dikes;
- Temporary culverts and swales;
- Sediment traps; and/or
- Silt fences.

MM 3.6/28.0 The potential impacts of long-term erosion and sedimentation can be reduced by the appropriate design, construction, and continued maintenance of surface and subsurface drainage of one or more of the following long-term control measures.

- Required measures for a specific project should be based on the recommendations of the project geotechnical consultants and approved by the City.
- Construction of sediment catch basins at strategic locations to prevent off site sedimentation from existing and/or potential on-site sources;

- Design and construction of storm sewer systems that incorporate the cumulative effects of project buildout
- Creek bank stabilization and repair of existing gullies;
- Revegetation and continued maintenance of graded slopes;
- Construction of drainage ditches or cut and fill slopes and/or natural slopes above developed areas;
- Closed downspout collection systems for individual structures;
- Design of cut and fill slopes to minimize, as much as possible, natural low velocity sheet flow runoff; and
- Periodic homeowner/landowner maintenance.

Project Impacts and Mitigation Measures

(a) Seismic hazards

No New Impact. Potential impacts related to seismic hazards are described below:

Fault Rupture. The project site is not located within or adjacent to an Alquist-Priolo Earthquake Fault Zone. Therefore, the project would have no impact related to fault rupture.

Ground Shaking. The project site and the entire San Francisco Bay Area are located in a seismically active region subject to strong seismic ground shaking. The intensity of an earthquake is a subjective measure of the perceptible effects of a seismic event at a given point. The Modified Mercalli Intensity (MMI) scale is the most commonly used scale to measure the subjective effects of earthquake intensity. It uses values ranging from I to XII.

Mapping has been compiled by the Metropolitan Transportation Commission (MTC) and Association of Bay Area Governments (ABAG) for the likely shaking intensities in the Bay Area that would have a 10 percent chance of occurring in any 50-year period. A large earthquake (magnitude 6.7 or greater) on one of the major active faults in the region would generate severe (MMI 8) ground shaking at the project site.

The most significant adverse impact associated with strong seismic shaking is potential damage to structures and improvements. Implementation of the proposed project would increase the use of the project site and result in the construction of improvements in areas subject to seismic shaking. The risk of ground shaking impacts is reduced through adherence to the design and materials standards set forth in building codes. The City of Dublin has adopted the 2022 CBC (Title 24, Part 2 of the California Code of Regulations), which provides for stringent construction requirements on projects in areas of high seismic risk. Consistent with MM 3.6/1.0 and MM 3.6/2.0 identified in the Eastern Dublin EIR and described above, the design and construction for the proposed project would be required to conform with, or exceed, current best standards for earthquake resistant construction in accordance with the most recent CBC adopted by the City and with the generally accepted standards of geotechnical practice for seismic design in Northern California. In addition, the proposed project would be designed and

constructed in accordance with the site-specific grading and construction techniques identified in the Geotechnical Investigation to reduce impacts related to seismic ground shaking to a less-than-significant level. With adherence to MM 3.6/1.0 and MM 3.6/2.0 identified in the Eastern Dublin EIR, there would be no new or substantially more severe significant impacts related to ground shaking beyond what has been analyzed in the Eastern Dublin EIR.

Liquefaction. Liquefaction is the transformation of loose, fine-grained sediment to a fluid-like state similar to quicksand. This phenomenon occurs due to strong seismic activity and lessens the soil's ability to support a structural foundation. The primary factors affecting the possibility of liquefaction in soil are: (1) intensity and duration of earthquake shaking; (2) soil type and relative density; (3) overburden pressures; and (4) depth to groundwater. Soil most susceptible to liquefaction is clean, loose, fine-grained sands and non-plastic silts that are saturated.

The California Geological Survey (CGS) has mapped Seismic Hazard Zones that delineate areas susceptible to liquefaction and/or landslides that require proposed new developments in these areas to conduct additional investigation to determine the extent and magnitude of potential ground failure. According to mapping by CGS, the project site is located in an area mapped as a liquefaction hazard zone. However, the Geotechnical Investigation concludes that even under the influence of severe ground shaking, the soils at the project site are unlikely to liquefy. The proposed project would be designed and constructed consistent with the most current earthquake resistance standards for Seismic Zone 4 in the CBC and the site-specific recommendations identified in the Geotechnical Investigation, which includes specifications for site preparation, such as grading and compaction requirements and foundation design criteria. In addition, implementation of mitigation measures MM 3.6/2.0, MM 3.6/4.0, MM 3.6/5.0, MM 3.6/6.0, and MM 3.6/7.0, identified in the Eastern Dublin EIR and described above would reduce potential impacts associated with these hazards to less than significant by requiring minimal grading and avoidance of unstable landforms, use of retention structures to improve slope stability, adequate compaction of fill material, accommodation of estimated settlement, and implementation of site-specific geotechnical recommendations.

Landslide. As described above, the proposed project is located on generally level terrain and the potential for landslide is low. Therefore, the proposed project would not expose people or structures to potential substantial adverse effects from landslides. This impact would be less than significant.

The project does not propose substantial changes that were not previously analyzed in the Eastern Dublin EIR that would require major changes to the Eastern Dublin EIR. Based on the information in the Eastern Dublin EIR and this environmental analysis, with adherence to applicable regulatory requirements, including the site-specific recommendations identified in the Geotechnical Investigation, and mitigation measures identified in the Eastern Dublin EIR there would be no new impacts related to seismic hazards beyond what has been analyzed in the previous Eastern Dublin EIR, and no other CEQA standards for supplemental review are met. Therefore, no further environmental review is required.

(b) Erosion/topsoil loss

No New Impact. The potential for soil erosion exists during the period of earthwork activities and between the time when earthwork is completed, and new vegetation is established, or hardscape is installed. Exposed soils could be entrained in stormwater runoff and transported off the project site. Construction specifications require the preparation of a Stormwater Pollution and Prevention Plan (SWPPP) prior to any ground disturbance activities as required by the National Pollutant Discharge Elimination System (NPDES) General Permit (GP) for Construction (Order 2009-009-DWQ). The SWPPP would provide the details of the erosion control measures to be applied on the project site during the construction period, including Best Management Practices (BMPs) for erosion control that are recognized by the RWQCB. Additional details regarding the SWPPP are provided in Section 9, Hydrology and Water Quality. In addition, the proposed project would be required to comply with MM 3.6/27.0 and MM 3.6/28.0, identified in the Eastern Dublin EIR and described above, to reduce short- and long-term erosion and sedimentation associated with project construction and operation.

The project does not propose substantial changes that were not previously analyzed in the Eastern Dublin EIR that would require major changes to the Eastern Dublin EIR. Based on the information in the Eastern Dublin EIR and this environmental analysis, with adherence to applicable regulatory requirements and mitigation measures identified in the Eastern Dublin EIR there would be no new impacts related to erosion beyond what has been analyzed in the previous Eastern Dublin EIR, and no other CEQA standards for supplemental review are met. Therefore, no further environmental review is required for this impact.

(c-d) Soil stability

No New Impact. Expansive soils are characterized by the potential for shrinking and swelling as the moisture content of the soil decreases and increases, respectively. Shrink-swell potential is influenced by the amount and type of clay minerals present and can be measured by the percent change of the soil volume. Soils underlying the project site are primarily composed of Clear Lake clay, drained, 0 to 2 percent slopes and Clear Lake clay, drained, 3 to 7 percent slopes, according to the United States Department of Agriculture (USDA) Natural Resources Conservation Service Web Soil Survey. Clear Lake clay is a very deep, poorly drained soil type, with high shrink-swell potential.

The proposed project would be designed and constructed consistent with the most current earthquake resistance standards for Seismic Zone 4 in the CBC and the site-specific recommendations identified in the Geotechnical Investigation, which includes specifications for site preparation, such as compaction requirements and foundation design criteria. Therefore, the project site is not anticipated to become unstable as a result of the proposed project, or potentially result in on- or off-site landslides, liquefaction, lateral spreading or settlement. In addition, implementation of mitigation measures MM 3.6/2.0, MM 3.6/4.0, MM 3.6/5.0, MM 3.6/6.0, and MM 3.6/7.0, identified in the Eastern Dublin EIR and described above would reduce potential impacts associated with unstable soils to a less-than-significant level by requiring minimal grading and avoidance of unstable landforms, use of retention structures to

improve slope stability, adequate compaction of fill material, accommodation of estimated settlement, and implementation of site-specific geotechnical recommendations.

The project does not propose substantial changes that were not previously analyzed in the Eastern Dublin EIR that would require major changes to the Eastern Dublin EIR. Based on the information in the Eastern Dublin EIR and this environmental analysis, with adherence to applicable regulatory requirements, including City development requirements, and mitigation measures identified in the Eastern Dublin EIR there would be no new impacts related to unstable soils beyond what has been analyzed in the previous Eastern Dublin EIR, and no other CEQA standards for supplemental review are met. Therefore, no further environmental review is required.

(e) Soil capability to support wastewater disposal, including septic

No New Impact. The proposed project would connect to the existing wastewater conveyance system. On-site treatment and disposal of wastewater is not proposed for the project; therefore, the proposed project would have no impacts associated with soils incapable of supporting alternative wastewater disposal systems.

The project does not propose substantial changes that were not previously analyzed in the Eastern Dublin EIR that would require major changes to the Eastern Dublin EIR. Based on the information in the Eastern Dublin EIR and this environmental analysis, there would be no new impacts related to septic systems beyond what has been analyzed in the previous Eastern Dublin EIR, and no other CEQA standards for supplemental review are met. Therefore, no further environmental review is required.

(f) Paleontological/unique geological resources

No New Impact. Artificial Fill has no paleontological sensitivity, the Surficial Sediments have low paleontological sensitivity, and the Livermore Gravel, which may be encountered at undetermined depths below the Surficial Sediments within the project site, has high paleontological sensitivity (see Figure 5). Project plans and information provided by the project applicant indicate that the deepest excavation associated with the project is expected to be for the storm drain line, which would extend to a maximum depth of approximately 10 feet. Excavation for sewer lines would extend to a depth of 7 feet, trenching for utilities would extend to a depth of 5 feet, and excavation for bioretention areas would extend to a depth of 4 feet. Grading for the building pads and roads/parking would extend to depths of 3 feet and 2 feet, respectively. Excavation for these activities may extend into the high sensitivity Livermore Gravel located at undetermined depths below the Surficial Sediments. Therefore, there is a potential for the project to impact scientifically significant paleontological resources. If such resources are encountered during ground-disturbing activities, implementation of Mitigation Measure 3.9/5.0 as identified in the Eastern Dublin EIR and listed in Section 5. Cultural Resources, which requires work stoppage in the event of discovery, would reduce any potential impacts to paleontological resources to a less-than-significant level.

The project does not propose substantial changes that were not previously analyzed in the Eastern Dublin EIR that would require major changes to the Eastern Dublin EIR. Based on the information in the Eastern Dublin EIR and this environmental analysis, with adherence to the mitigation measures identified in the Eastern Dublin EIR, there would be no new impacts to paleontological resources beyond what has been analyzed in the previous Eastern Dublin EIR, and no other CEQA standards for supplemental review are met. Therefore, no further environmental review is required.

Conclusion

The project does not propose substantial changes that were not previously analyzed in the EDSP EIRs that would require major changes to the Eastern Dublin EIR. Based on the information in the Eastern Dublin EIR and this environmental analysis, the project would not substantially increase the severity of the previously identified geology and soils impacts, nor result in new significant impacts.

With adherence to applicable regulatory requirements and mitigation measures identified in the Eastern Dublin EIR there would be no new or substantially more severe significant impacts to geology and soils beyond what has been analyzed in the previous EDSP EIRs, and no other CEQA standards for supplemental review are met. Therefore, no further environmental review is required.

Greenhouse Gas Emissions

ENVIRONMENTAL IMPACTS Issues	Potentially Significant Issues	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No New Impact
7. GREENHOUSE GAS EMISSIONS. Would the project:				
a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?				X
b) Conflict with applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?				X

Previous CEQA Documents

Since certification of the Eastern Dublin EIR, the issue of the contribution of greenhouse gasses to climate change has become a more prominent issue of concern as evidenced by passage of Assembly Bill 32 in 2006 and Senate Bill 32 in 2016.

Because the Eastern Dublin EIR has been certified, the determination of whether greenhouse gasses and climate change need to be analyzed for this project is governed by the law on supplemental or subsequent EIRs (Public Resources Code section 21166 and CEQA Guidelines, Sections 15162 and 15163). Greenhouse gas and climate change is not required to be analyzed under those standards unless it constitutes “new information of substantial importance, which was not known and could not have been known at the time the Eastern Dublin EIR was certified as complete” (CEQA Guidelines Sec. 15162 (a) (3)).

Greenhouse gas and climate change impacts were not analyzed in the Eastern Dublin EIR; however, these impacts are not new information that was not known or could not have been known at the time this previous EIR was certified. The issue of climate change and greenhouse gasses was widely known prior to the certification of this EIR. The United Nations Framework Convention on Climate Change was established in 1992. The regulation of greenhouse gas emissions to reduce climate change impacts was extensively debated and analyzed throughout the early 1990s. The studies and analyses of this issue resulted in the adoption of the Kyoto Protocol in 1997.

Therefore, the impact of greenhouse gases on climate change was known at the time of the certification of the Eastern Dublin EIR. Under CEQA standards, it is not new information that requires analysis in a supplemental EIR or Negative Declaration. No supplemental environmental analysis of the project's impacts on this issue is required under CEQA.

Project Impacts and Mitigation Measures

(a-b) Generate greenhouse gas (GHG) emissions or conflict with GHG plans or regulations

As discussed above, no additional environmental analysis is required under CEQA Section 21166 and CEQA Guidelines section 15162.

Conclusion

No CEQA standards for supplemental review are met. Therefore, no further environmental review is required.

Hazards and Hazardous Materials

ENVIRONMENTAL IMPACTS Issues	Potentially Significant Issues	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No New Impact
8. HAZARDS AND HAZARDOUS MATERIALS. Would the project:				
a) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?				X
b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?				X
c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within ¼ mile of an existing or proposed school?				X
d) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?				X
e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?				X
f) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?				X
g) Expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires, including where wildlands are adjacent to urbanized areas or where residences are intermixed with wildlands?				X

Environmental Setting

The site contains native and introduced tree and other vegetation species, as further described in Section 4, Biological Resources of this Initial Study. The site has historically been used as a landscape contracting business with outdoor storage and contains one single-family home and associated outbuildings. Building materials and similar equipment are currently stored on the site. The project site has a gradual slope to the south toward an unnamed tributary. A six-foot

chain link fence with a four-foot-tall sheet metal barrier at the base has been installed along the southern property line to provide a wildlife barrier between the project site and adjacent tributary.

Surrounding land uses include Quarry Lane School to the north. To the east of the project site are open space lands that are part of the Northern Drainage Conservation Area (NDCA). Immediately south of the project site is the unnamed tributary of Tassajara Creek. Single-family residential development and undeveloped open space are located further to the south. Tassajara Road is located immediately to the west of the project site.

Previous CEQA Documents

The Eastern Dublin EIR did not include a discussion of hazards and hazardous materials as an identified environmental topic area as it was not determined to be an environmental issue of concern; however, the Eastern Dublin EIR did discuss the potential for hazardous materials releases as part of the analysis of solid waste disposal and fire protection. Mitigation measures identified for solid waste disposal are included in Section 18, Utilities and Service Systems of this Initial Study. The Eastern Dublin EIR did identify potentially significant impacts related to wildfire and fire hazards. Mitigation measures identified for wildfire and fire hazards are included in Section 19, Wildfire of this Initial Study.

Because the Eastern Dublin EIR has been certified, the determination of whether impacts related to hazards or hazardous materials need to be analyzed for this project is governed by the law on supplemental or subsequent EIRs (Public Resources Code section 21166 and CEQA Guidelines, Sections 15162 and 15163). Hazardous materials are not required to be analyzed under those standards unless it constitutes “new information of substantial importance, which was not known and could not have been known at the time the Eastern Dublin EIR was certified as complete” (CEQA Guidelines Sec. 15162 (a) (3)).

Hazardous materials impacts were not analyzed in the Eastern Dublin EIR; however, these impacts are not new information that was not known or could not have been known at the time this previous EIR was certified. The issue of hazards and hazardous materials was widely known prior to the certification of this EIR.

Therefore, the impact of hazardous materials was known at the time of the certification of the Eastern Dublin EIR. Under CEQA standards, it is not new information that requires analysis in a supplemental EIR or Negative Declaration. No supplemental environmental analysis of the project's impacts on this issue is required under CEQA.

Project Impacts and Mitigation Measures

(a-d) Exposure to hazardous materials, upset/accident, near school, hazardous materials list
As discussed above, no additional environmental analysis is required under CEQA Section 21166 and CEQA Guidelines section 15162.

(e) Proximity to a public airport

No New Impact. The project site is not located within an airport land use plan, or within two miles of a public airport or public use airport. The project site is located approximately 3.14-mile northwest of the Livermore Municipal Airport. The proposed project would not be an incompatible land use, would not add structures of a height such that it would create a hazard or obstruction, and would not result in the addition of a characteristic that would create a hazard to air navigation.

The project does not propose substantial changes that were not previously analyzed in the Eastern Dublin EIR that would require major changes to the Eastern Dublin EIR. Based on the information in the Eastern Dublin EIR and this environmental analysis, there would be no new impacts related to proximity to a public airport beyond what has been analyzed in the previous Eastern Dublin EIR, and no other CEQA standards for supplemental review are met. Therefore, no further environmental review is required.

(f) Impair implementation of an emergency response plan or emergency evacuation plan

No New Impact. The Tri-Valley Local Hazard Mitigation Plan was developed in compliance with State requirements and also meets the requirements of the Federal Emergency Management Agency (FEMA) as the City's local hazard mitigation plan. The Tri-Valley Local Hazard Mitigation Plan provides a uniform hazard mitigation strategy for the Tri-Valley area, addressing a range of hazards including, but not limited to, earthquakes, floods and wildland fire. The City of Dublin also has an adopted Comprehensive Emergency Management Plan and a Local Hazard Mitigation Plan to assess hazards and mitigate risks prior to a disaster event.

The proposed project would construct a performing arts complex to serve the existing Quarry Lane School, along Tassajara Road. It is not located along an identified evacuation route, nor would it affect local roadways. The proposed project would not interfere with an adopted emergency response plan or emergency evacuation plan. Because the proposed project would not substantially alter or block the adjacent roadways, the proposed project would not be expected to impair the function of nearby emergency evacuation routes, including Tassajara Road.

The project does not propose substantial changes that were not previously analyzed in the Eastern Dublin EIR that would require major changes to the Eastern Dublin EIR. Based on the information in the Eastern Dublin EIR and this environmental analysis, there would be no new impacts related to implementation of an adopted emergency response plan or emergency evacuation plan beyond what has been analyzed in the previous Eastern Dublin EIR, and no other CEQA standards for supplemental review are met. Therefore, no further environmental review is required.

(g) Expose people or structures to wildland fires

No New Impact. A wildland fire is a fire occurring in a suburban or rural area which contains uncultivated land, timber, range, brush, or grasslands. Wildland fires are primarily a concern in areas where there is a mix of developed and undeveloped lands. A portion of the project site is

located within a moderate Fire Hazard Severity Zone within a State Responsibility Area (SRA), as mapped by the California Department of Forestry and Fire Protection (CAL FIRE).

The proposed project would be constructed in accordance with the requirements of the CBC, California Fire Code, and the City's Wildfire Management Plan. In addition, consistent with the City's entitlement process and Mitigation Measure 3.5/9.0 (discussed below in Section 18. Wildfire) in the Eastern Dublin EIR, project plans would be reviewed by the Alameda County Fire Department to ensure that required fire protection elements are incorporated into final building plans, including provision of adequate water supply and pressure, and use of appropriate landscape and building materials.

The project does not propose substantial changes that were not previously analyzed in the Eastern Dublin EIR that would require major changes to the Eastern Dublin EIR. Based on the information in the Eastern Dublin EIR and this environmental analysis, with adherence to applicable regulatory requirements and MM 3.5/9.0 identified in the Eastern Dublin EIR, there would be no new impacts related to wildfire beyond what has been analyzed in the previous Eastern Dublin EIR, and no other CEQA standards for supplemental review are met. Therefore, no further environmental review is required.

Conclusion

The project does not propose substantial changes that were not previously analyzed in the Eastern Dublin EIR that would require major changes to the Eastern Dublin EIR. Based on the information in the Eastern Dublin EIR and this environmental analysis, with adherence to applicable regulatory requirements and mitigation measures identified in the Eastern Dublin EIR, there would be no new impacts to hazards and hazardous materials beyond what has been analyzed in the previous Eastern Dublin EIR, and no other CEQA standards for supplemental review are met. Therefore, no further environmental review is required.

Hydrology and Water Quality

ENVIRONMENTAL IMPACTS Issues	Potentially Significant Issues	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No New Impact
9. HYDROLOGY AND WATER QUALITY. Would the project:				
a) Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or groundwater quality?				X
b) Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?				X
c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:				X
(i). Result in substantial erosion or siltation on- or off-site;				X
(ii). Substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or offsite;				X
(iii). Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or				X
(iv). Impede or redirect flood flows?				X
d) In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?				X
e) Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?				X

Environmental Setting

The project site is located within the Alameda Creek watershed which drains to the San Francisco Bay. The 660-square-mile Alameda Creek watershed is the largest watershed in the Bay Area, extending from Mount Hamilton north to Mount Diablo, east to the Altamont Hills and west to San Francisco Bay. The project site is located within the jurisdiction of Zone 7 of the Alameda County Flood Control and Water Conservation District (Zone 7).

The project site is located within the San Francisco Bay Hydrologic Region. The San Francisco Bay RWQCB Basin Plan identifies the Project as being within the Livermore Valley groundwater basin (Basin ID 2-10). As defined in DWR Bulletin 118 Update 2003 (California's Groundwater), the Livermore Valley Groundwater Basin (DWR Basin 2-10) extends from the Pleasanton Ridge east to the Altamont Hills and from the Livermore Uplands north to the Tassajara Uplands. According to the Geotechnical Investigation prepared for the proposed project, groundwater was not encountered in any of the exploratory holes, which extended to a maximum depth of 20.5 feet below the existing ground surface.

As described in Section 4, Biological Resources, a tributary to Tassajara Creek and its associated riparian woodland is located to the south of the project site. The riparian woodland and tributary are part of the Northern Drainage Conservation Area (NDCA) and are separated from the project site by an existing 6-foot-high chain link fence with a 3.5-foot-high sheet metal barrier along its base that was constructed along the southern site boundary. A potentially jurisdictional seasonal wetland was also observed just east of the site.

Based on the Flood Insurance Rate Map (FIRM) published by the Federal Emergency Management Agency (FEMA) [06001C0326G, dated August 3, 2009], the project site is located in an area of minimal flood hazard.

Previous CEQA Documents

Eastern Dublin EIR

The Eastern Dublin EIR identified potentially significant impacts related to the overdraft of potential flooding, reduced groundwater recharge, and non-point sources of pollution. Mitigation measures were identified to reduce potential impacts to a less-than-significant level. The following mitigation measures would apply to the proposed project:

MM 3.5/44.0 Require drainage facilities that will minimize any increased potential or erosion or flooding.

MM 3.5/45.0 Require channel improvements consisting of natural creek bottoms and side slopes with natural vegetation where possible to meet Policy 9.7 above.

MM 3.5/46.0 Storm Drainage Master Plan. Require a Master Drainage Plan be prepared for each development application prior to development approval. The plan shall include:

- Hydrologic studies of entire related upstream watersheds.
- Phase approach and system modeling.
- Documentation of existing conditions.
- Design-level analysis of the impacts of proposed development of the existing creek channels and watershed areas.

- Detailed analysis of effects of development on water quality of surface runoff.
- Detailed drainage design plans for each phase of the proposed project.
- Design features to minimize runoff flows within existing creeks/channels in order to alleviate potential erosion impacts and maintain riparian vegetation.

MM 3.5/47.0 Flood Control. Require development in the Planning Area to provide facilities to alleviate potential downstream flooding due to project development. These facilities shall include:

- Retention/detention facilities as appropriate to control peak runoff discharge rates.
- Energy dissipators at discharge locations to prevent channel erosion, as per Zone 7 guidelines. Energy dissipators should be designed to minimize adverse effects on biological resources and the visual environment; in particular, widespread use of riprap should be avoided.

MM 3.5/49.0 Plan facilities and select management practices in the Eastern Dublin Specific Plan EIR area that protect and enhance water quality.

MM 3.5/50.0 Zone 7 supports ongoing groundwater recharge program from the Central Basin.

MM 3.5/51.0 Develop community-based programs to educate local residents and businesses on methods to reduce non-point sources of pollution. Coordinate such programs with current Alameda County programs. Such programs include:

- Increased availability of liquid recycling centers (i.e., oil, greases, etc.) to reduce potential for dumping into storm drains.
- Programs that educate the public that catch basins and storm drains flow to creeks, to potable groundwater basins, and to the San Francisco Bay, including a potential program to paint labels at each catch basin and storm drain to alert people to these facts.

Project Impacts and Mitigation Measures

(a) Violate water quality or waste discharge requirements or degrade surface or groundwater quality

No New Impact. Construction activities associated with the proposed project would cause disturbance of soil during excavation work, which could adversely impact water quality. Contaminants from construction vehicles and equipment and sediment from soil erosion could increase the pollutant load in runoff being transported to receiving water during development. Although surface runoff from the site would likely decrease with the proposed project (due to proposed stormwater treatment measures), runoff from the proposed landscaped areas may contain residual pesticides and nutrients (associated with landscaping) and sediment and trace

metals (associated with atmospheric deposition) during operation of the project. Implementation of mitigation measures Mitigation Measure 3.6/27.0 and Mitigation Measure 3.6/28.0, as described in Section 6, Geology and Soils, would ensure that potential water quality impacts associated with project construction are reduced to a less-than-significant level. The project would be required to comply with these mitigation measures.

In addition, because the project would result in the disturbance of greater than one acre of soil, project implementation is required to comply with the Construction General Permit, which requires preparation of a SWPPP and implementation of BMPs to reduce the discharge of construction-related stormwater pollutants. A SWPPP must include a detailed description of controls to reduce pollutants and outline maintenance and inspection procedures. Typical sediment and erosion BMPs include protecting storm drain inlets, establishing and maintaining construction exits and perimeter controls to avoid tracking sediment off-site onto adjacent roadways. A SWPPP also defines proper building material staging and storage areas, paint and concrete washout areas, describes proper equipment/vehicle fueling and maintenance practices, measures to control equipment/vehicle washing and allowable non-stormwater discharges, and includes a spill prevention and response plan. Compliance with the requirements of the Construction General Permit and implementation of mitigation measures Mitigation Measure 3.6/27.0 and Mitigation Measure 3.6/28.0 ensure that the proposed project would result in less-than-significant impacts to water quality during construction.

Although the site is partially developed, the proposed project would increase the total amount of impervious surface on the project site. The increase in impervious surface could result in increased stormwater runoff (both flow rate and volume) from the project site relative to pre-project conditions, which may result in hydromodification impacts (i.e., increased potential for erosion of creek beds and banks, silt pollution generation, or other adverse impacts on beneficial uses due to increased erosive force). Hydromodification is the alteration of the natural flow of water through a landscape, and often takes the form of creek channel erosion. Hydromodification is one of the leading sources of impairment in streams, lakes, and estuaries.

The proposed project is subject to the conditions of the Municipal Regional Permit (MRP) (Order No. R2-2022-0018 NPDES Permit No. CAS612008). The C.3 Stormwater Technical Guidance updated in February 2021 as per the Alameda County Clean Water Program, outlines low impact development (LID) provisions that the MRP permit holders can use during planning of development activities to manage and reduce occurrences of stormwater runoff pollutant discharges. These low impact development methods aim to preserve existing natural landscapes to minimize imperviousness and water quality impacts.

The proposed project would be considered a “regulated project” under the MRP. Provision C.3 of the MRP requires new development and redevelopment projects that would replace more than 5,000 square feet of existing impervious surfaces to include post-construction stormwater control in project designs, including measures for site design, source control, runoff reduction, stormwater treatment, and baseline hydromodification management. Under the C.3 requirements, the preparation and submittal of a Stormwater Control Plan (SCP) would be

required for the project site. The purpose of a SCP is to detail the design elements and implementation measures necessary to meet the post-construction stormwater control requirements of the MRP. In particular, SCPs must include LID design measures, which reduce water quality impacts by preserving and recreating natural landscape features, minimizing imperviousness, and using stormwater as a resource, rather than a waste product. The proposed project would also be required to prepare a Stormwater Facility Operation and Maintenance Plan to ensure that stormwater control measures are inspected, maintained, and funded for the life of the project. Compliance with the C.3 requirements of the MRP would ensure that operation-period impacts to water quality would be less than significant.

As outlined in the project description, the proposed project would include approximately 3,460 square feet of bioretention area on the project site that would be used for stormwater quality control. The proposed project would include approximately 18 bioretention basins and storm drains throughout the project site, which would connect to the existing stormdrain pipeline in Tassajara Road.

In addition, Mitigation Measure 3.5/46.0, identified in the Eastern Dublin EIR, which requires preparation of a storm drainage plan for the proposed project, would ensure that potential impacts associated with stormwater runoff would be reduced to a less-than-significant level.

The project does not propose substantial changes that were not previously analyzed in the Eastern Dublin EIR that would require major changes to the Eastern Dublin EIR. Based on the information in the Eastern Dublin EIR and this environmental analysis, with compliance with existing regulatory requirements and implementation of the mitigation measures identified in the Eastern Dublin EIR, no new impacts or substantially more severe significant impacts related to water quality violations, wastewater discharges, or water quality degradation would occur, and no other CEQA standards for supplemental review are met. Therefore, no further environmental review is required.

(b) Substantially decrease or interfere with groundwater supplies

No New Impact. Although the proposed project would result in a net increase in impervious surface coverage compared to the existing condition, the proposed project would include the use of LID, including multiple bioretention basins and storm drains throughout the site that would retain and clean stormwater on-site before discharging it into the municipal stormwater system, consistent with Provision C.3 of the MRP.

The proposed project would connect to the existing water lines within the vicinity of the project site and would not require the use of groundwater. Due to the depth of groundwater and the shallow excavations required for project construction, dewatering is not anticipated during construction activities.

The project does not propose substantial changes that were not previously analyzed in the Eastern Dublin EIR that would require major changes to the Eastern Dublin EIR. Based on the information in the Eastern Dublin EIR and this environmental analysis, with adherence to applicable regulatory requirements and mitigation measures identified in the Eastern Dublin

EIR, there would be no new impacts to groundwater supplies beyond what has been analyzed in the previous Eastern Dublin EIR, and no other CEQA standards for supplemental review are met. Therefore, no further environmental review is required.

(c) Substantially alter existing drainage patterns re: erosion/siltation, re: flooding, or degrade water quality

No New Impact. The proposed project would create new landscaped areas and impermeable pavement surfaces, which would alter the existing drainage pattern of the project site. However, as discussed above, the proposed project would be required to comply with the C.3 requirements of the MRP, standard City development requirements related to stormwater, and mitigation measures identified in the Eastern Dublin EIR, including Mitigation Measure 3.5/47.0, which requires preparation of a flood control plan for the proposed project.

As noted in Section 8.b and 9.a, the proposed project would be required to prepare a SWPPP as required by the Construction General Permit and consistent with Mitigation Measure 3.6/27.0 and Mitigation Measure 3.6/28.0, identified in the Eastern Dublin EIR, to reduce short- and long-term erosion and sedimentation associated with project construction and operation.

Required compliance with applicable regulations, implementation of City policies, and the mitigation measures identified in the Eastern Dublin EIR, would reduce potential impacts of the project related to changes in drainage patterns to a less-than-significant level by requiring preparation and implementation of a SWPPP during project construction, compliance with the C.3 requirements of the MRP to manage stormwater during project operation, and preparation of a flood control plan.

The project does not propose substantial changes that were not previously analyzed in the Eastern Dublin EIR that would require major changes to the Eastern Dublin EIR. Based on the information in the Eastern Dublin EIR and this environmental analysis, with adherence to applicable regulatory requirements and mitigation measures identified in the Eastern Dublin EIR, there would be no new impacts to existing drainage patterns beyond what has been analyzed in the previous Eastern Dublin EIR, and no other CEQA standards for supplemental review are met. Therefore, no further environmental review is required.

(d) Flood hazard, seiche, or tsunami

No New Impact. As described above, the project site is not located within a flood hazard area mapped by FEMA, or a mapped tsunami inundation area for Alameda County, and no seismically induced seiche waves have ever been documented in the San Francisco Bay Area. Additionally, the proposed project would implement various design features to ensure contaminants would be contained.

The project does not propose substantial changes that were not previously analyzed in the Eastern Dublin EIR that would require major changes to the Eastern Dublin EIR. Based on the information in the Eastern Dublin EIR and this environmental analysis, with adherence to applicable regulatory requirements and mitigation measures identified in the Eastern Dublin

EIR, there would be no new impacts related to flood hazard, seiche or tsunami beyond what has been analyzed in the previous Eastern Dublin EIR, and no other CEQA standards for supplemental review are met. Therefore, no further environmental review is required.

(e) Water Quality

No New Impact. The Water Quality Control Plan for the San Francisco Bay Basin (Basin Plan)³¹ is the master policy document that establishes the water quality objectives and strategies needed to protect designated beneficial water uses in the San Francisco Bay region. The State Water Board and the Regional Water Board enforce compliance with the water quality objectives of the Basin Plan through the issuance of NPDES permits. As noted above, the proposed project would implement various design features to ensure the proposed project would have a less-than-significant impact related to water quality, including multiple bioretention basins and storm drains throughout the site that would retain and clean stormwater on-site before discharging it into the municipal stormwater system, consistent with Provision C.3 of the MRP, with which all projects in the City of Dublin must comply.

The project site is not located within a mapped Division of Water Rights groundwater basin boundary. Therefore, the proposed project would not interfere with groundwater recharge in the vicinity of the project site. The proposed project would not conflict with or obstruct the implementation of a sustainable groundwater management plan.

The project does not propose substantial changes that were not previously analyzed in the Eastern Dublin EIR that would require major changes to the Eastern Dublin EIR. Based on the information in the Eastern Dublin EIR and this environmental analysis, with adherence to applicable regulatory requirements and mitigation measures identified in the Eastern Dublin EIR, there would be no new impacts to water quality beyond what has been analyzed in the previous Eastern Dublin EIR, and no other CEQA standards for supplemental review are met. Therefore, no further environmental review is required.

Conclusion

The project does not propose substantial changes that were not previously analyzed in the Eastern Dublin EIR that would require major changes to the Eastern Dublin EIR. Based on the information in the Eastern Dublin EIR and this environmental analysis, with adherence to applicable regulatory requirements and mitigation measures identified in the Eastern Dublin EIR, there would be no new impacts to hydrology and water quality beyond what has been analyzed in the previous Eastern Dublin EIR, and no other CEQA standards for supplemental review are met. Therefore, no further environmental review is required.

Land Use and Planning

ENVIRONMENTAL IMPACTS Issues	Potentially Significant Issues	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No New Impact
10. LAND USE AND PLANNING. Would the project:				
a) Physically divide an established community?				X
b) Cause a significant environmental impact due to a conflict with any applicable land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?				X

Environmental Setting

The project site consists of an approximately 12-acre property that currently contains the existing private K-12 Quarry Lane School in the north and the proposed area for the performing arts complex in the south. The proposed expansion area has historically been used as a landscape contracting business with outdoor storage and contains one single-family home and associated outbuildings. Building materials and similar equipment are currently stored on the site. Surrounding land uses include residential development to the north; to the east of the project site are open spaces that are part of the NDCA. Immediately south of the project site is an unnamed tributary of Tassajara Creek. Single-family residential development and undeveloped open space are located further to the south. Tassajara Road is located immediately to the west of the project site.

Previous CEQA Documents

Eastern Dublin EIR

The Eastern Dublin EIR identified less than significant impacts related to the substantial alteration to existing land use, on-site project land use conflicts, conversion of non-urban lands, potential conflicts with land uses to the south, east and north. A potentially significant impact was identified related to potential conflicts with land uses to the west, which was determined to be less than significant with implementation of Mitigation Measure 3.1/1.0, which requires the City to coordinate with the U.S. Army regarding future development proposals in the vicinity of the U.S. Army's Parks Reserve Forces Training Area (Camp Parks RFTA). This mitigation measure does not apply to the proposed project.

Project Impacts and Mitigation Measures

(a) Physically divide an established community

No New Impact. The physical division of an established community typically refers to the construction of a feature (such as an interstate highway or railroad tracks) or removal of a

means of access (such as a local road or bridge) that would impair mobility within an existing community, or between a community and outlying areas.

The proposed project would involve the demolition of the existing structures on the project site and development of a new auditorium and associated parking lot directly south of the existing Quarry Lane School. Access to the project site would be via a new right-in driveway from Tassajara Road at the southern end of the project site, with a connection to the existing school parking lot, which has a signalized entry and exit to Tassajara Road. The proposed project would not result in the realignment or closure of any existing roads. Therefore, the proposed project would not result in the physical division of an established community or adversely affect the continuity of land uses in the vicinity. No new significant or substantially more severe significant impacts would occur.

(b) Conflict with land use plan, policy, or regulation

No New Impact. The proposed project would involve the demolition of the existing structures on the site and development of a new performing arts center and associated parking lot to serve the existing Quarry Lane School. The new facility would provide space to host the Quarry Lane School's existing performance art shows and events, as well as an improved space for high school commencement ceremonies.

As outlined in the project description, the project proposes a Conditional Use Permit to approve a minor amendment to the Stage 1 and Stage 2 Development Plan for the Community Facility use. The City of Dublin Planning Commission may approve minor amendments to an adopted Development Plan upon a finding that the amendment substantially complies with and does not materially change the provisions or intent of the adopted Planned Development Zoning District Ordinance for the site. As part of the project entitlements, the City may grant a Conditional Use Permit to allow for the proposed use. In addition, the proposed performing arts center would be compatible with the mix and intensity of uses located within the vicinity of the site, which generally consist of residential and open spaces, as well as the existing school. Therefore, the proposed project would not conflict with any applicable land use plans, policies, or regulations.

The project does not propose substantial changes that were not previously analyzed in the Eastern Dublin EIR that would require major changes to the Eastern Dublin EIR. Based on the information in the Eastern Dublin EIR and this environmental analysis, with adherence to applicable regulatory requirements, there would be no new impacts to land use and planning beyond what has been analyzed in the previous Eastern Dublin EIR, and no other CEQA standards for supplemental review are met. Therefore, no further environmental review is required.

Conclusion

The project does not propose substantial changes that were not previously analyzed in the Eastern Dublin EIR that would require major changes to the Eastern Dublin EIR. Based on the information in the Eastern Dublin EIR and this environmental analysis, with adherence to

applicable regulatory requirements, there would be no new impacts to land use and planning beyond what has been analyzed in the previous Eastern Dublin EIR, and no other CEQA standards for supplemental review are met. Therefore, no further environmental review is required.

Mineral Resources

ENVIRONMENTAL IMPACTS Issues	Potentially Significant Issues	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No New Impact
11. MINERAL RESOURCES. Would the project:				
a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?				X
b) Result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan?				X

Environmental Setting

Minerals are any naturally occurring chemical element or compound, or groups of elements and compounds, formed from inorganic processes and organic substances including, but not limited to, coal, peat, and oil-bearing rock, but excluding geothermal resources, natural gas, and petroleum. Rock, sand, gravel, and earth are also considered minerals by the Department of Conservation when extracted by surface mining operations.

Neither the State Geologist nor the California Department of Mines and Geology (CDMG) have classified any areas in the City as containing mineral deposits that are either of Statewide significance or the significance of which requires further evaluation.

Previous CEQA Documents

The Eastern Dublin EIR does not indicate that significant mineral resource deposits exist on the project site. Therefore, no impacts related to mineral resources were identified.

Project Impacts and Mitigation Measures

(a-b) Loss of known or identified mineral resources

No New Impact. The project site does not have any mineral extraction areas so there would be no new or substantially more severe impacts to mineral resources. The proposed project would not result in the loss of available of a known mineral resource that would be of value of the region and residents of the state or the loss of availability of any known locally important mineral resource recovery site. No new impact or increase in the severity of the impact would occur.

The project does not propose substantial changes that were not previously analyzed in the Eastern Dublin EIR that would require major changes to the Eastern Dublin EIR. Based on the information in the Eastern Dublin EIR and this environmental analysis, there would be no new impacts to mineral resources beyond what has been analyzed in the previous Eastern Dublin

EIR, and no other CEQA standards for supplemental review are met. Therefore, no further environmental review is required.

Conclusion

The project does not propose substantial changes that were not previously analyzed in the Eastern Dublin EIR that would require major changes to the Eastern Dublin EIR. Based on the information in the Eastern Dublin EIR and this environmental analysis, there would be no new impacts to mineral resources beyond what has been analyzed in the previous Eastern Dublin EIR, and no other CEQA standards for supplemental review are met. Therefore, no further environmental review is required.

Noise

ENVIRONMENTAL IMPACTS Issues	Potentially Significant Issues	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No New Impact
12. NOISE. Would the project result in:				
a) Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance or applicable standards of other agencies?				X
b) Generation of excessive ground borne vibration or ground borne noise levels?		X		
c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?				X

Environmental Setting

Noise is usually defined as unwanted sound. Noise consists of any sound that may produce physiological or psychological damage and/or interfere with communication, work, rest, recreation, or sleep. Several noise measurement scales exist that are used to describe noise in a particular location. A decibel (dB) is a unit of measurement that indicates the relative intensity of a sound. Sound levels in dB are calculated on a logarithmic basis. An increase of 10 dB represents a 10-fold increase in acoustic energy, while 20 dB is 100 times more intense and 30 dB is 1,000 times more intense. Each 10 dB increase in sound level is perceived as approximately a doubling of loudness; and similarly, each 10 dB decrease in sound level is perceived as half as loud. Sound intensity is normally measured through the A-weighted sound level (dBA). This scale gives greater weight to the frequencies of sound to which the human ear is most sensitive. The A-weighted sound level is the basis for 24-hour sound measurements that better represent human sensitivity to sound at night.

As noise spreads from a source, it loses energy so that the farther away the noise receiver is from the noise source, the lower the perceived noise level would be. Geometric spreading causes the sound level to attenuate or be reduced, resulting in a 6 dB reduction in the noise level for each doubling of distance from a single point source of noise to the noise sensitive receptor of concern.

Vibration refers to ground-borne noise and perceptible motion. Ground-borne vibration is almost exclusively a concern inside buildings and is rarely perceived as a problem where the motion may be discernible, but there is less adverse reaction without the effects associated

with the shaking of a building. Vibration energy propagates from a source through intervening soil and rock layers to the foundations of nearby buildings. The vibration then propagates from the foundation throughout the remainder of the structure. Building vibration may be perceived by occupants as motion of building surfaces, the rattling of items on shelves or hanging on walls, or a low-frequency rumbling noise, otherwise referred to as ground-borne noise.

Typically, sources that have the potential to generate ground-borne noise are likely to produce airborne noise impacts that mask the radiated ground-borne noise. The rumbling noise is caused by the vibrating walls, floors, and ceilings radiating sound waves. Annoyance from vibration often occurs when the vibration exceeds the threshold of perception by 10 dB or less. This is an order of magnitude below the damage threshold for normal buildings.

Typical sources of ground-borne vibration are construction activities (e.g., blasting, pile driving, and operating heavy-duty earthmoving equipment) and occasional traffic on rough roads. Problems with ground-borne vibration and noise from these sources are usually localized to areas within approximately 100 feet of the vibration source, although there are examples of ground-borne vibration causing interference out to distances greater than 200 feet. When roadways are smooth, vibration from traffic, even heavy trucks, is rarely perceptible. For most projects, it is assumed that the roadway surface will be smooth enough that ground-borne vibration from street traffic will not exceed the impact criteria; however, construction of the project could result in ground-borne vibration that could be perceptible and annoying.

Existing Noise Levels

Major sources of noise on and adjacent to the project site include noise generated by vehicles on Tassajara Road, aircraft flyovers (most likely private aircraft originating from Livermore Municipal Airport), and children playing at the Quarry Lane School. The existing noise conditions are based on baseline noise conditions identified in the 2016 Environmental Noise Impact Study for 6237 Tassajara Road, prepared by RGD Acoustics.³² Based on the results, the Community Noise Equivalent Level (CNEL) ranges between 46 dBA and 68 dBA at the project site. Table G shows the results of the noise measurements.

Table G: Ambient Noise Measurement Results (RGD Acoustics 2016)

Location	Date/Time	A-Weighted Noise Level, dBA					
		L_{eq}	L_{max}	L₁₀	L₅₀	L₉₀	CNEL
ST-1: Near northeastern corner of the project site boundary at 5 ft height above ground.	16 October 2014 11:45 – 12:00 p.m.	49	64	59	47	36	46**
ST-1: Near northeastern corner of the project site boundary at 24 ft height above ground.	18 October 2014 11:30 – 1:00 p.m.	55	72	65	49	37	52**
ST-2: Near western edge of project site boundary at 5 ft above ground close to Tassajara Road	16 October 2014 12:15 – 12:30 p.m.	69	87	80	63	50	68*
ST-3: Near northern edge of project site boundary at 5 ft above ground closest to Quarry Lane School parking lot.	16 October 2014 12:35 – 1:50 p.m.	57	65	62	56	52	54**

Source: RGD Acoustics. 2016. Environmental Noise Impact Study for 6237 Tassajara Road, Dublin, CA. March 10

CNEL = Community Noise Equivalent Level

L_{eq} = Equivalent Continuous Noise Level

* CNEL based on correlation with simultaneous measurement at long-term measurement location.

** CNEL due to children playing is calculated assuming the activity continues from 7 a.m. to 7 p.m.

Surrounding Noise Sensitive Land Uses

Certain land uses are considered more sensitive to noise than others. Examples of these include residential areas, educational facilities, hospitals, childcare facilities, and senior housing. The nearest noise sensitive uses are the Quarry Lane School which is north and adjacent to the site, and single-family residential buildings approximately 150 feet south of the project site boundary.

Local Regulations

City of Dublin General Plan. The Noise Element of the City of Dublin General Plan establishes residential, commercial, and industrial land use compatibility standards for noise measured at the property line of the receiving land use. The land use compatibility noise criteria, as shown in Table H, provide the basis for decisions on location of land uses in relation to noise sources and for determining noise mitigation requirements.

The Noise Element of the Dublin General Plan identifies "normally acceptable" noise levels for all schools, churches and nursing home uses as 60 dBA CNEL or less. Noise levels from 61-70 CNEL are considered "conditionally acceptable", while noise levels between 71-80 CNEL are considered "normally unacceptable." Noise levels over 80 dBA CNEL are considered clearly unacceptable for new development of these types of land uses.

Table H: City of Dublin Land Use/Noise Compatibility Standards (dBA CNEL)

Land Use Category	Normally Acceptable	Conditionally Acceptable ¹	Normally Unacceptable	Clearly Unacceptable
Residential	60 or less	61-70	71-75	Over 75
Motels, hotels	60 or less	61-70	71-80	Over 80
Schools, churches, nursing homes	60 or less	61-70	71-80	Over 80
Neighborhood parks	60 or less	61-65	66-70	Over 70
Offices: retail commercial	70 or less	71-75	76-80	Over 80
Industrial	70 or less	71-75	Over 75	-

Source: Dublin General Plan Noise Element, Table 9-1, 2012

CNEL = Community Noise Equivalent Level

¹ Conditionally acceptable exposure requires noise insulation features in building design. Conventional construction, but with closed windows and fresh air supply systems or air conditioning will normally suffice.

Eastern Dublin Specific Plan. As described in Section 6.4.2 of the EDSP, the primary source of noise in eastern Dublin is traffic along I-580. The 60 dB contour for noise levels, which is considered the maximum normally acceptable level of residential uses and other sensitive uses extends approximately 2,000 feet north of the freeway. As specified in Policy 6-44, development along the I-580 frontage will be required to provide adequate mitigation to conform to the State Land Use Compatibility Standards for noise and policies and standards in the City of Dublin's Noise Element.

City of Dublin Municipal Code. The City of Dublin Municipal Code (Section 5.28.020) prohibits any person within the City from making any loud, or disturbing, or unnecessary, or unusual or habitual noise or any noise which annoys or disturbs or injures or endangers the health, repose, peace, or safety of any reasonable person of normal sensitivity present in the area.

Section 8.36.060(C)(3) states that for lots 5,000 square feet or larger, mechanical equipment that generates noise when located within a required setback as allowed by this subsection, and within 10 feet of an existing or potential residence, or an existing paved patio area on adjoining property, shall be enclosed as necessary to reduce noise at the property line to a maximum of 50 dBA at any time.

Previous CEQA Documents

Eastern Dublin EIR

The Eastern Dublin EIR identified that impacts related to the exposure of existing and proposed development to airport noise would be less than significant. The Eastern Dublin EIR also found that impacts related to exposure of proposed housing to future roadway noise, exposure of existing and proposed residences to construction noise, and noise conflicts due to the adjacency of diverse land uses permitted by plan policies supporting mixed-use development would be less than significant with implementation of mitigation measures identified in the

Eastern Dublin EIR. In addition, the Eastern Dublin EIR identified that impacts associated with exposure of existing residences to future roadway noise and exposure of proposed residential development to noise from future military training activities at Camp Parks RFTA and the County jail would be significant and unavoidable. The following mitigation measures would apply to the proposed project:

MM 3.10/2.0 Require that development projects provide for noise barriers or berms near existing residences to control noise in outdoor use spaces. One possibility is the construction of solid fences around outdoor use areas. The noise control for existing residences should be evaluated on a case-by-case basis.

MM 3.10/3.0 Require an acoustical study prior to future development in the Tassajara Foothill Residential, Tassajara Village Center, County Center, and Hacienda Gateway sub-area to determine if future noise impact from Parks RFT A or the County jail will be within acceptable limits. The goal of the study will be to identify all potential noise-generating operations and determine if future noise levels will exceed the acceptable levels as defined by the City and Army.

MM 3.10/4.0 Developers shall submit to the City a Construction Noise Management Program that identifies measures to be taken to minimize impacts on existing planning area residents. The program will include a schedule for grading and other major noise-generating activities that will limit these activities to the shortest possible number of days. Hours of construction activities shall be limited in keeping with Dublin ordinances. The Program for construction vehicle access to the site shall minimize construction truck traffic through residential areas. If construction traffic must travel through residential areas, then a mitigation plan should be developed. The Program may include barriers, berms, or restrictions on hours.

MM 3.10/5.0 In order to minimize the impact of construction noise, all operations should comply with local noise standards relating to construction activities. When construction occurs near residential areas, then it should be limited to normal daytime hours to minimize the impact. Stationary equipment should be adequately muffled and located as far away from sensitive receptors as possible.

MM 3.10/6.0 Noise management plans shall be prepared and reviewed as part of development application for all mixed-use projects in which residential units would be combined with commercial, office, or other urban non-residential uses. The objective of the noise management plan would be to provide a high-quality acoustic environment for residents and nonresidential tenants/ owners by taking steps to minimize or avoid potential noise problems. The plan would be prepared by a qualified acoustical consultant. The plan would take into account the concerns of residents, nonresidential tenants/ owners, and maintenance personnel. The plan should be prepared at an early stage of the design process. Ideally, the acoustical consultant should provide input to

the architect at a preliminary site plan stage, to make maximum use of detailed site planning to avoid noise conflicts.

Project Impacts and Mitigation Measures

(a) Generate noise exceeding standards

No New Impact. The short-term construction and long-term noise impacts associated with the proposed project are described below.

Short-Term Construction Noise Impacts. Project construction would result in short-term noise impacts on the nearby sensitive receptors. Maximum construction noise would be short-term, generally intermittent depending on the construction phase, and variable depending on receiver distance from the active construction zone. The duration of noise impacts generally would be from one day to several days depending on the phase of construction. The level and types of noise impacts that would occur during construction are described below.

Table I lists typical construction equipment noise levels (L_{max}) recommended for noise impact assessments, based on a distance of 50 feet between the equipment and a noise receptor, obtained from the Federal Highway Administration (FHWA) Roadway Construction Noise Model. Construction-related short-term noise levels would be higher than existing ambient noise levels currently in the project area but would no longer occur once construction of the project is completed.

Two types of short-term noise impacts could occur during construction of the proposed project. The first type involves construction crew commutes and the transport of construction equipment and materials to the site, which would incrementally increase noise levels on roads leading to the site. As shown in Table I, there would be a relatively high single-event noise exposure potential at a maximum level of 84 dBA L_{max} with trucks passing at 50 feet.

The second type of short-term noise impact is related to noise generated during site preparation and the construction of the proposed project. According to the construction schedule, the phases of construction include: (1) demolition; (2) site preparation; (3) grading; (4) building construction; (5) paving; and (6) architectural coating. Construction of the proposed project is anticipated to begin in fall of 2023 and be completed by fall of 2024.

Construction would be undertaken in discrete steps, each of which would have its own mix of equipment, and consequently its own noise characteristics. These various sequential phases would change the character of the noise generated on the project site. Therefore, the noise levels would vary as construction progresses. Despite the variety in the type and size of construction equipment, similarities in the dominant noise sources and patterns of operation allow construction-related noise ranges to be categorized by work phase.

Table I lists the maximum noise levels from the Highway Construction Noise Handbook recommended for noise impact assessments for the loudest anticipated construction that would be used for the project based on a distance of 50 feet between the equipment and a

noise receptor. Typical operating cycles for these types of construction equipment may involve one to two minutes of full power operation followed by three to four minutes at lower power settings.

Table I: Typical Maximum Construction Equipment Noise Levels (L_{max})

Type of Equipment	Acoustical Usage Factor	Suggested Maximum Sound Levels for Analysis (dBA L_{max} at 50 ft)
Air Compressor	40	80
Backhoe	40	80
Crane	16	85
Dozers	40	85
Excavator	40	85
Forklift	20	85
Generator	50	80
Grader	40	85
Loader	40	80
Paver	50	85
Roller	20	85
Scraper	40	85
Skid Steer Loader	40	80
Tractor	40	84
Trencher	50	82
Water Truck	40	84

Source: *Highway Construction Noise Handbook* (FHWA 2006).

dBA = A-weighted decibel

FHWA = Federal Highway Administration

ft = foot/feet

HP = horsepower

L_{max} = maximum noise level

Each piece of construction equipment operates as an individual point source. Utilizing the following equation, a composite noise level can be calculated when multiple sources of noise operate simultaneously:

$$Leq \text{ (composite)} = 10 * \log_{10} \left(\sum_1^n 10^{\frac{Ln}{10}} \right)$$

Table J shows the composite noise levels of the two loudest pieces of equipment for each construction phase, at a distance of 50 feet from the construction area.

Once composite noise levels are calculated, reference noise levels can then be adjusted for distance using the following equation:

$$Leq \text{ (at distance } X) = Leq \text{ (at 50 feet)} - 20 * \log_{10} \left(\frac{X}{50} \right)$$

In general, this equation shows that doubling the distance would decrease noise levels by 6 dBA while halving the distance would increase noise levels by 6 dBA.

Table J: Equipment Noise by Construction Phase

Construction Phase	Loudest Equipment	Composite Noise Level at (dBA L_{eq} at 50 ft)
Demolition	Concrete Saw	88
	Dozer	
	Tractor	
Site Preparation	Grader	85
	Dozer	
	Tractor	
Grading	Grader	86
	Dozer	
	Tractor	
Building Construction	Crane	83
	Forklift	
	Generator	
	Tractor	
	Welder	
Paving	Paver	85
	Paving Equipment	
	Roller	
Architectural Coating	Air Compressor	74

Sources: Compiled by LSA Associates, Inc. (2023). *Construction Noise Handbook* (FHWA 2006).

dBA = A-weighted decibel

FHWA = Federal Highway Administration

ft = foot/feet

L_{max} = maximum noise level

Based on the typical construction equipment noise levels shown in Table J, noise levels associated with these pieces of construction equipment operating simultaneously would be approximately 88 dBA L_{eq} at 50 feet during the demolition phase.

The closest sensitive receptors to the project site include the Quarry Lane School located approximately 100 feet north from the center of project site and the residences located approximately 450 feet south from the center of project site. Noise levels were calculated from the center of site as an average distance of where construction activities would occur, resulting in short-term noise levels of approximately 81 dBA L_{eq} at the Quarry Lane School and 68 dBA L_{eq} at the residences.

Construction equipment would operate at various locations throughout project site and construction activities at any one receptor location would occur for a limited duration. While construction-related, short-term noise levels have the potential to be higher than existing ambient noise levels in the project area, the noise impacts would no longer occur once project construction is completed.

As compared to the Eastern Dublin EIR, the proposed project would generate similar noise levels during construction and would implement the previously required mitigation measures,

Mitigation Measures 3.10/4.0 and 3.10/5.0, identified above, to reduce construction related impacts to a less-than-significant level. With implementation of these mitigation measures, which require preparation and implementation of a Construction Noise Management Program that includes limiting major noise-generative activities, compliance with Dublin ordinances, and compliance with local noise standards relating to construction activities, the proposed project would not result in any new or more severe impacts compared to those identified in the Eastern Dublin EIR.

Long-Term Off-Site Traffic Noise Impacts. The Eastern Dublin EIR identified the sources of major noise affecting the EDSP area to be vehicular traffic stemming from I-580. The proposed project is not expected to generate any additional traffic. The Eastern Dublin EIR identified a potentially significant impact for future roadway noise as a result of the build out of the EDSP, which includes the proposed project. Implementation of the mitigation measures identified within the Eastern Dublin EIR would reduce these impacts to a less-than-significant level.

Long-Term Off-Site Operation-Related Noise Impacts. Noise impacts associated with the long-term operation of the project must comply with the noise standards specified in the City's Municipal Code, which sets a 50 dBA L_{eq} standard for residential land uses. Stationary noise generated by the proposed project include heating, ventilation, and air conditioning (HVAC) equipment, and parking lot activities.

Parking Lot Activities. Typical parking lot activities, such as people conversing or doors slamming, would generate noise levels of approximately 60 dBA to 70 dBA L_{max} at 50 feet, based on measurements previously conducted by LSA.

The closest off-site sensitive receptors to the project site include the residence located approximately 350 feet south of the proposed parking lot at the project site. At this distance, parking lot activities would only result in maximum noise levels of 53 dBA L_{max}. Peak noise levels from parking lot activities would be intermittent and when averaged over one hour, these sources would not exceed the City's 50 dBA L_{eq} standard for residential land uses.

Mechanical Equipment. In addition, adjacent off-site land uses would be potentially exposed to stationary-source noise impacts from HVAC equipment. The project is expected to have HVAC units serving the proposed building at the project site. The HVAC equipment could operate 24 hours per day. One HVAC unit would generate a noise level of 72 dBA L_{eq} at 3.3 feet, based on manufacturer testing of typical equipment for such uses. However, based on the distance of 40 feet to the closest off-site sensitive receptor to the north (Quarry Lane School) and accounting for shielding from the rooftop parapet wall, the noise level associated with the operation of the proposed HVAC equipment would approach 46 dBA L_{eq} and would be below the City's 50 dBA L_{eq} exterior noise standard for mechanical equipment. Therefore, the project would not result in generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or any other applicable standards.

The project does not propose substantial changes that were not previously analyzed in the Eastern Dublin EIR that would require major changes to the Eastern Dublin EIR. Based on the information in the Eastern Dublin EIR and this environmental analysis, with adherence to applicable regulatory requirements and Mitigation Measures 3.10/4.0 and 3.10/5.0 identified in the Eastern Dublin EIR, there would be no new impacts related to noise beyond what has been analyzed in the previous Eastern Dublin EIR, and no other CEQA standards for supplemental review are met. Therefore, no further environmental review is required.

(b) Generate excessive ground borne vibration or ground borne noise

Less Than Significant with Mitigation Incorporated. Construction of the proposed project could result in the generation of ground borne vibration. This construction vibration impact analysis assesses the potential for building damages using vibration levels in peak particle velocity (PPV). The criteria for environmental impacts resulting from ground borne vibration are based on the maximum levels for a single event. The guidelines within the Federal Transit Administration (FTA) Manual have been used to determine vibration impacts (refer to Table K, below).

Table K: Construction Vibration Damage Criteria

Building Category	PPV (inches/second)
Reinforced concrete, steel, or timber (no plaster)	0.50
Engineered concrete and masonry (no plaster)	0.30
Non-engineered timber and masonry buildings	0.20
Buildings extremely susceptible to vibration damage	0.12

Source: *Transit Noise and Vibration Impact Assessment Manual* (FTA 2018), Table 12-3.

FTA = Federal Transit Administration

PPV = peak particle velocity

The FTA Manual guidelines show that a vibration level of up to 0.2 inches/second PPV is considered safe for non-engineered timber and masonry buildings and would not result in any construction vibration damage. Therefore, in order to be conservative, the 0.2 inches/second PPV threshold has been used when evaluating vibration impacts at the nearest structures to the site.

Table L shows the PPV values at 25 feet from a construction vibration source. Bulldozers and other heavy-tracked construction equipment (except for vibratory rollers) generate approximately 0.089 inches/second PPV of ground borne vibration when measured at 25 feet.

Table L: Vibration Source Amplitudes for Construction Equipment

Equipment	Reference PPV (inches/second) at 25 feet
Vibratory Roller	0.210
Hoe Ram	0.089
Large Bulldozer	0.089
Caisson Drilling	0.089
Loaded Trucks	0.076
Jackhammer	0.035
Small Bulldozer	0.003

Sources: *Transit Noise and Vibration Impact Assessment* (FTA 2018).

PPV = peak particle velocity

Construction vibration, similar to vibration from other sources, would not have any significant effects on outdoor activities (e.g., those outside of residential buildings in the project vicinity). While vibration from construction activity was not assessed in the Eastern Dublin EIR, the proposed project is expected to include the use of heavy equipment similar to a large bulldozer. The distance to the nearest buildings for vibration impact analysis is measured between the nearest off-site buildings and the project disturbance areas because vibration impacts occur normally within the buildings. The formula for vibration transmission is provided below.

$$\text{PPV}_{\text{equip}} = \text{PPV}_{\text{ref}} \times (25/D)^{1.5}$$

The closest structure to the project site includes the Quarry Lane School building located approximately 10 feet north of the project site. At this distance, the closest structure would experience vibration levels of approximately 0.352 inches/second PPV with the use of heavy equipment at the property line. Based on this analysis, vibration levels would exceed the established guidelines considered for damage potential. Vibration levels at all other buildings, which are further from construction activity, would be lower due to distance propagation and would be below the thresholds for damage potential. With implementation of Project Specific Mitigation Measure NOI-1, which requires preparation and implementation of a vibration and construction contingency plan during project construction activities, impacts related to vibration would be less than significant. In addition, short-term construction impacts related to ground-borne vibration or ground-borne noise would be minimal and temporary in nature and would cease upon construction.

Project-Specific MM-NOI-1: **Construction Vibration Damage.** Due to the close proximity to surrounding structures, the City of Dublin (City) Director of Community Development, or designee, shall verify prior to issuance of demolition or grading permits, that the approved plans require that the construction contractor to implement the following noise reduction measures during project construction activities to ensure that damage does not occur at surrounding

structures should heavy equipment be necessary within 15 feet of surrounding structures:

- Identify structures that are located within 15 feet of heavy construction activities and that have the potential to be affected by ground-borne vibration. This task shall be conducted by a qualified structural engineer as approved by the City's Director of Community Development, or designee.
- Develop a vibration monitoring and construction contingency plan for approval by the City Director of Community Development, or designee, to identify structures where monitoring would be conducted; set up a vibration monitoring schedule; define structure-specific vibration limits; and address the need to conduct photo, elevation, and crack surveys to document before and after construction conditions. Construction contingencies would be identified for when vibration levels approached the limits.
- At a minimum, monitor vibration during initial demolition activities. Monitoring results may indicate the need for more or less intensive measurements.
- When vibration levels approach limits, suspend construction and implement contingencies as identified in the approved vibration monitoring and construction contingency plan to either lower vibration levels or secure the affected structures.

As indicated above, vibration levels at the existing Quarry Lane school would exceed the established vibration guidelines considered for damage potential, resulting in a new significant impact than was previously identified in the Eastern Dublin EIR. Therefore, implementation of Project-Specific Mitigation Measure NOI-1 would be required to reduce vibration during project construction. With implementation of Project-Specific Mitigation Measure NOI-1, this impact would be reduced to a less-than-significant level.

(c) Excessive noise level near an airport

No New Impact. The project site is located approximately 3.14-mile northwest of the Livermore Municipal Airport. Aircraft noise is occasionally audible at the project site; however, no portion of the project site lies within the 60 dBA CNEL noise contours of this airport nor does any portion of the project site lie within two miles of any other airfield or heliport. Therefore, the

proposed project would not result in the exposure of people residing or working in the project area to excessive noise levels and there would be no impact.

The project does not propose substantial changes that were not previously analyzed in the Eastern Dublin EIR that would require major changes to the Eastern Dublin EIR. Based on the information in the Eastern Dublin EIR and this environmental analysis, there would be no new impacts related to excessive noise levels near an airport beyond what has been analyzed in the previous Eastern Dublin EIR, and no other CEQA standards for supplemental review are met for these two project impacts. Therefore, no further environmental review is required.

Conclusion

The project does not propose substantial changes that were not previously analyzed in the Eastern Dublin EIR that would require major changes to the Eastern Dublin EIR for the following project impacts (subsections (a) and (c)): generate noise exceeding standards and excessive noise level near an airport. Based on the information in the Eastern Dublin EIR and this environmental analysis, with adherence to applicable regulatory requirements and mitigation measures identified in the Eastern Dublin EIR, there would be no new impacts related to noise beyond what has been analyzed in the previous Eastern Dublin EIR, and no other CEQA standards for supplemental review are met for these two project impacts. Therefore, no further environmental review is required for these two project impacts.

For the project impact related to generation of excessive ground borne vibration or ground borne noise (subsection (b)), with the implementation of a project-specific mitigation measure (Mitigation Measure NOI-1), impacts to noise would be less than significant.

Population and Housing

ENVIRONMENTAL IMPACTS Issues	Potentially Significant Issues	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No New Impact
13. POPULATION AND HOUSING. Would the project:				
a) Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?				X
b) Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?				X

Environmental Setting

According to the City of Dublin General Plan, in 2010, Dublin's total population was estimated at 46,036 and represented 17 percent of the 269,437 residents in the Tri-Valley area. Data from the 2020 United States Census indicates that Dublin's total population has grown to 72,589 and 24,426 housing units.

Previous CEQA Documents

Eastern Dublin EIR

Section 3.2 in the Eastern Dublin EIR provides the demographics, housing, and employment context for the EDSP. The Eastern Dublin EIR provided a program-level analysis of the development potential envisioned for the EDSP Area, including the increased development potential in the City, the Tri-valley area, and the entire San Francisco Bay Area. The Eastern Dublin EIR specifically evaluated new development potential in the EDSP Area of up to 17,970 residential units and approximately 12 million square feet of non-residential space, including approximately 5 million square feet of commercial, 4 million square feet of office, and 2 million square feet of industrial park. No impacts related to population or displacement of existing housing were identified. Growth-inducing impacts associated with implementation of the EDSP were evaluated in Section 5.2 of the Eastern Dublin EIR. Growth-inducing impacts were identified for utilities and community services.

Project Impacts and Mitigation Measures

(a) Population growth

No New Impact. The proposed project would construct a Performing Arts Center for the existing Quarry Lane School, including a performance hall with seating for approximately 350 people. The proposed project would provide a dedicated space for the existing performing arts program but would not include any growth in total student enrollment or an expansion of

existing school operations. No new housing, commercial, or industrial space would be developed as part of the proposed project. The proposed project would not result in the conversion of adjacent land uses or provide access to previously inaccessible areas. It would not provide additional major infrastructure or increase the capacity of the existing water system. The project does not propose substantial changes that were not previously analyzed in the Eastern Dublin EIR that would require major changes to the Eastern Dublin EIR. Based on the information in the Eastern Dublin EIR and this environmental analysis, there would be no new impacts related to population growth beyond what has been analyzed in the previous Eastern Dublin EIR, and no other CEQA standards for supplemental review are met. Therefore, no further environmental review is required.

(b) Housing and resident displacement

No New Impact. The project site contains an existing residence and various out-buildings. The Eastern Dublin EIR determined that due to the limited number of current residents, development of the project site would not displace substantial number of existing housing units or people; therefore, no impact was identified. As the Eastern Dublin EIR addressed the removal of the existing residence on the project site, there would be no impact, and no new or substantially more severe impacts would occur. The project does not propose substantial changes that were not previously analyzed in the Eastern Dublin EIR that would require major changes to the Eastern Dublin EIR. Based on the information in the Eastern Dublin EIR and this environmental analysis, there would be no new impacts related to housing and resident displacement beyond what has been analyzed in the previous Eastern Dublin EIR, and no other CEQA standards for supplemental review are met. Therefore, no further environmental review is required.

Conclusion

The project does not propose substantial changes that were not previously analyzed in the Eastern Dublin EIR that would require major changes to the Eastern Dublin EIR. Based on the information in the Eastern Dublin EIR and this environmental analysis, there would be no new impacts to population and housing beyond what has been analyzed in the previous Eastern Dublin EIR, and no other CEQA standards for supplemental review are met. Therefore, no further environmental review is required.

Public Services

ENVIRONMENTAL IMPACTS Issues	Potentially Significant Issues	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No New Impact
14. PUBLIC SERVICES. Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities or need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for any of the public services:				
a) Fire protection?				X
b) Police protection?				X
c) Schools?				X
d) Parks?				X
e) Other public facilities?				X

Environmental Setting

The proposed project is located within the City of Dublin and is served by the following existing public services.

Fire Protection

Fire suppression, emergency medical and rescue services, and other life safety services are provided to the project area and site by the Alameda County Fire Department (ACFD). There are three fire stations in Dublin, with the closest to the project site being Fire Station No. 18 at 4800 Fallon Road, approximately 4.4 miles northwest. Back up service to the Project area would be provided by Fire Station 17, located at 6200 Madigan Road in Dublin.

Police Protection

The Alameda County Sheriff's Office provides contracted police protection to the project area and project site. The Dublin Police Services headquarters are located at 6361 Clark Avenue, west of the project site.

Schools

The project site is served by the Dublin Unified School District, which operates seven elementary, two middle, one K-8, one comprehensive high school, and one continuation high school, within the City of Dublin. The closest schools to the project site include Fallon Middle School, Jose Maria Amador Elementary School, and Cottonwood Creek K-8 School.

Parks

The City's Public Works Department oversees the maintenance of parks and recreational facilities throughout the City.

Library Services

The Dublin Library is operated by Alameda County Library, with additional funding from the City of Dublin. The Dublin Public Library is located at 200 Civic Plaza, southwest of the project site.

Previous CEQA Documents

Eastern Dublin EIR

The Eastern Dublin EIR identified potentially significant impacts related to increased demand for police and fire protection services, fire response to outlying areas, exposure to wildlands hazards, increased demand for schools and school overcrowding, increased demand for parks, and impacts on existing park and trail facilities. Mitigation measures were identified to reduce potential impacts to a less-than-significant level. The following mitigation measures would be applicable to the proposed project:

MM 3.4 /1.0 (Policy 8-4). Provide additional personnel and facilities and revise "beats" as needed in order to establish and maintain City standards for police protection service in Eastern Dublin.

MM 3.4/2.0 (Action Program 8D). Coordinate with the City Police Department regarding the timing of annexation and proposed development, so that the Department can adequately plan for the necessary expansion of services to the area.

MM 3.4/3.0 (Action Program 8E). Incorporate into the requirements of project approval Police Department recommendations on project design that affect traffic safety and crime prevention.

MM 3.4/5.0 Police Review of Proposed Projects. As a part of the development approval process in Eastern Dublin, the City shall require the Police Department to review and respond to the planned development with respect to:

- Project design layout relating to visibility, security, and safety.
- Project circulation system and access issues.
- Project implications for emergency response times.

Prior to final approval of non-residential development and improvement plans, the City Police Department shall review the proposed use, layout, design, and other project features for police surveillance/access, security devices, such as alarms and lighting, visibility, and any other police issues or concerns.

MM 3.4/7.0 (Program 8F). Establish appropriate funding mechanisms (e.g., Mello Roos District, developer financing with reimbursement agreements, etc.) to cover up-front costs of capital improvements (i.e., fire stations and related facilities and equipment).

MM 3.4/9.0 (Program 8H). Incorporate DRFA recommendations on project design relating to access, water pressure, fire safety and prevention into the requirements for development approval. Require that the following DRFA design standards are incorporated where appropriate:

- Use of non-combustible roof materials in all new construction.
- Available capacity of 1,000 GPM at 20 PSI fire flow from project fire hydrants on public water mains. For groupings of one-family and small two-family dwellings not exceeding two stories in height, the fire flow requirements are a minimum of 1,000 GPM. Fire flow requirements for all other buildings will be calculated based on building size, type of construction, and location.
- A buffer zone along the backs of homes, which are contiguous with the wildland area. This buffer zone is to be landscaped with irrigated (wet banding) or equivalent fire-resistive vegetation.
- Automatic fire alarm systems and sprinklers in all nonresidential structures for human use.
- Compliance with DRFA minimum road widths, maximum street slopes, parking recommendations, and secondary access road requirements.
- Require residential structures outside the DRFA's established response time and zone to include fire alarm systems and sprinklers.

MM 3.4/17.0 (Policy 8-3). Ensure that new development in Eastern Dublin, including both residential and non-residential development, fully mitigates the impact of such growth on school facilities.

MM 3.4/29.0 (Policy 4-29). Ensure, as part of the approval process, that each new development provide its fair share of planned open space, parklands, and trail corridors.

MM 3.4/31.0 (Action Program 4N). Calculate and assess in-lieu park fees based on the City's parkland dedication ordinance. Credit toward parkland dedication requirements will only be given for level or gently sloping areas suitable for active recreation use.

Project Impacts and Mitigation Measures

(a) Fire Protection

No New Impact. The proposed project would consist of a new Performing Arts Center, three classrooms, and other support spaces with a total building area of 13,800 square feet and

approximately 126 additional parking spaces. Implementation of the proposed project would provide a new facility to host previously existing events for Quarry Lane School and would not include any growth in total student enrollment or an expansion of existing school operations. Therefore, development would not increase demand for public services and would not exceed the physical and financial capabilities of the Alameda County Fire Department (ACFD). Further, the proposed project is required to adhere to the CBC, the California Fire Code and City of Dublin codes, ordinance and regulations to minimize fire hazards, including fire prevention and suppression measures; fire hydrants and sprinkler systems; emergency access; and other similar requirements. ACFD would continue to provide services to the project site and would not require additional firefighters to serve the proposed project. The demand for fire protection services resulting from the proposed project would not require the construction of new or alteration of existing fire protection facilities to maintain an adequate level of fire protection service. No physical impacts associated with the provision of fire protection services would occur.

The project does not propose substantial changes that were not previously analyzed in the Eastern Dublin EIR that would require major changes to the Eastern Dublin EIR. Based on the information in the Eastern Dublin EIR and this environmental analysis, there would be no new impacts to fire protection beyond what has been analyzed in the previous Eastern Dublin EIR, and no other CEQA standards for supplemental review are met. Therefore, no further environmental review is required.

(b) Police Protection

No New Impact. As stated above, the proposed project would consist of a new Performing Arts Center. Development would not increase demand for public services and would not exceed the physical and financial capabilities of the Alameda County Sheriff's Office, resulting in the need for new or expanded police. Demand for police protection services resulting from the proposed project would have no impact compared to the level of service identified in the Eastern Dublin EIR and would not require the construction of new or alteration of existing police protection facilities to maintain an adequate level of police protection service. No physical impacts associated with the provision of police protection services would occur.

The project does not propose substantial changes that were not previously analyzed in the Eastern Dublin EIR that would require major changes to the Eastern Dublin EIR. Based on the information in the Eastern Dublin EIR and this environmental analysis, there would be no new impacts to police protection beyond what has been analyzed in the previous Eastern Dublin EIR, and no other CEQA standards for supplemental review are met. Therefore, no further environmental review is required.

(c) Schools

No New Impact. As stated above, the proposed project involves the development of a new Performing Arts Center as an addition to the existing Quarry Lane School. Implementation of the proposed project would provide a new facility to host previously existing events for Quarry Lane School and would not include any growth in total student enrollment or an expansion of

existing school operations. No new housing, commercial, or industrial space would be developed as part of the proposed project; therefore, the proposed project would not generate increased demand for school facilities and services. No physical impacts associated with the provision of school services would occur.

The project does not propose substantial changes that were not previously analyzed in the Eastern Dublin EIR that would require major changes to the Eastern Dublin EIR. Based on the information in the Eastern Dublin EIR and this environmental analysis, there would be no new impacts to schools beyond what has been analyzed in the previous Eastern Dublin EIR, and no other CEQA standards for supplemental review are met. Therefore, no further environmental review is required.

(d) Parks

No New Impact. As stated above, the proposed project would consist of a new Performing Arts Center to serve the existing Quarry Lane School and would not include any growth in total student enrollment or an expansion of existing school operations. No new housing, commercial, or industrial space would be developed as part of the proposed project; therefore, the proposed project would not generate increased demand for park facilities and recreational services. The proposed project would have no impact on existing parks and would not require the construction of new or alteration of existing park or recreational facilities.

The project does not propose substantial changes that were not previously analyzed in the Eastern Dublin EIR that would require major changes to the Eastern Dublin EIR. Based on the information in the Eastern Dublin EIR and this environmental analysis, there would be no new impacts to parks beyond what has been analyzed in the previous Eastern Dublin EIR, and no other CEQA standards for supplemental review are met. Therefore, no further environmental review is required.

(e) Other public facilities

No New Impact. As stated above, the proposed project would consist of a new Performing Arts Center. Implementation of the proposed project would provide a new facility to host existing events for Quarry Lane School and would not include any growth in total student enrollment or an expansion of existing public facilities; demand for public facilities and recreational services resulting from the proposed project would have no impact compared to the level of service identified in the prior environmental review and would not require the construction of new or alteration of existing public or recreational facilities.

The project does not propose substantial changes that were not previously analyzed in the Eastern Dublin EIR that would require major changes to the Eastern Dublin EIR. Based on the information in the Eastern Dublin EIR and this environmental analysis, there would be no new impacts to other public facilities beyond what has been analyzed in the previous Eastern Dublin EIR, and no other CEQA standards for supplemental review are met. Therefore, no further environmental review is required.

Conclusion

The project does not propose substantial changes that were not previously analyzed in the Eastern Dublin EIR that would require major changes to the Eastern Dublin EIR. Based on the information in the Eastern Dublin EIR and this environmental analysis, with adherence to applicable regulatory requirements and mitigation measures identified in the Eastern Dublin EIR, there would be no new impacts to public services beyond what has been analyzed in the previous Eastern Dublin EIR, and no other CEQA standards for supplemental review are met. Therefore, no further environmental review is required.

Recreation

ENVIRONMENTAL IMPACTS Issues	Potentially Significant Issues	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No New Impact
15. RECREATION. Would the project:				
a) Increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?				X
b) Include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?				X

Environmental Setting

The City of Dublin has a variety of recreational facilities including neighborhood parks, community parks, community facilities, a senior center, open space areas, and a series of trail networks. According to the City of Dublin Parks and Recreation Master Plan, the City of Dublin currently has 18 parks, five deeded park sites, and six school parks and City-owned open space areas that account for nearly 233 acres of dedicated open space and developed park land. In addition, the City has over 59 acres of undeveloped parkland that has either been offered for dedication by landowners or acquired by the City. In addition, the East Bay Regional Park District (EBRPD) operates the Dublin Hills Regional Park, a large open space park with regional trail connections. The Iron Horse Trail runs along the Union Pacific/Southern Pacific Railroad right-of-way, connecting Dublin, the Dublin/Pleasanton BART station, and the City of Pleasanton.

Previous CEQA Documents

Eastern Dublin EIR

The Eastern Dublin EIR identified potentially significant impacts related to increased demand for park facilities, fiscal impacts associated with the provision of new park and recreation facilities and impacts on the regional trail system and open space connections. Mitigation measures were identified to reduce potential impacts to a less than significant level. The following mitigation measures would be applicable to the proposed project:

MM 3.4/29.0 (Policy 4-29). Ensure, as part of the approval process, that each new development provide its fair share of planned open space, parklands, and trail corridors.

MM 3.4/31.0 (Action Program 4N). Calculate and assess in-lieu park fees based on the City's parkland dedication ordinance. Credit toward parkland dedication requirements will only be given for level or gently sloping areas suitable for active recreation use.

Project Impacts and Mitigation Measures

(a, b) Increase the use of existing recreation facilities causing deterioration or require new recreation facilities

The City's park and recreational facilities are comprised of neighborhood facilities, community facilities, community parks and community center. According to the City of Dublin Parks and Recreation Master Plan, the City of Dublin currently has 18 parks, five deeded park sites, and six school parks and City-owned open space areas that account for nearly 233 acres of dedicated open space and developed park land. In addition, the City has over 59 acres of undeveloped parkland that has either been offered for dedication by landowners or acquired by the City. The number, location and size of parks is consistent with the approved Stage 1 Development Plan as well as the City of Dublin Parks and Recreation Master Plan. The 11.5 acres of parkland within the project site meets the City of Dublin 2015 Parks and Recreation Master Plan ratio of 5.0 acres of parkland per 1,000 residents. Since the project includes sufficient park land it would not increase the use of existing neighborhood and/or regional parks such that a substantial physical deterioration of the facility would occur or be accelerated, nor would it require the construction/expansion of a recreational facility elsewhere which would have an adverse physical effect on the environment.

The project does not propose substantial changes that were not previously analyzed in the Eastern Dublin EIR that would require major changes to the Eastern Dublin EIR. Based on the information in the Eastern Dublin EIR and this environmental analysis, with adherence to the City of Dublin Parks and Recreation Master Plan and mitigation measures identified in the Eastern Dublin EIR, there would be no new impacts to recreation beyond what has been analyzed in the previous Eastern Dublin EIR, and no other CEQA standards for supplemental review are met. Therefore, no further environmental review is required.

Conclusion

The project does not propose substantial changes that were not previously analyzed in the Eastern Dublin EIR that would require major changes to the Eastern Dublin EIR. Based on the information in the Eastern Dublin EIR and this environmental analysis, with adherence to the City of Dublin Parks and Recreation Master Plan and mitigation measures identified in the Eastern Dublin EIR, there would be no new impacts to recreation beyond what has been analyzed in the previous Eastern Dublin EIR, and no other CEQA standards for supplemental review are met. Therefore, no further environmental review is required.

Transportation

ENVIRONMENTAL IMPACTS Issues	Potentially Significant Issues	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No New Impact
16. TRANSPORTATION/TRAFFIC. Would the project:				
a) Conflict with a program, plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?				X
b) Would the project conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?				X
c) Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?				X
d) Result in inadequate emergency access?				X

Environmental Setting

The following section describes the existing conditions of the study area, including roadway, transit, bicycle, and pedestrian networks.

Roadway Network

The roadway network surrounding the project site is described in the following section.

Freeways

Interstate 580 (I-580) is a generally east-west freeway that runs south of the project site. I-580 connects the San Francisco Bay Area to the west and the City of Livermore to the east. The posted speed limit in the vicinity of the project is 65 miles per hour (mph). Express lanes are present in both directions and are in effect Monday through Friday from 5:00 a.m. to 8:00 p.m.

Arterials/Collectors/Local Roadways

Tassajara Road is a major north-south roadway in Dublin that connects to Fallon Road/Camino Tassajara to the north and the City of San Ramon and Contra Costa County to the south. Tassajara Road is classified as an arterial roadway within the City of Dublin; south of I-580 within the City of Pleasanton, the roadway becomes Santa Rita Road. The roadway varies from two lanes to five lanes and is divided along its southern portion, between Stoneridge Drive and Dublin Ranch Drive. On-street parking is not permitted along this roadway. The posted speed limit is 35 mph within the study area. Class II bicycle lanes are present, except for on the overpass over I-580.

Dublin Boulevard is a six-lane divided east-west roadway that extends west of the project site. Dublin Boulevard is classified in the City's General Plan³³ as an arterial between its western limits and Tassajara Road and classified as a collector between Tassajara Road and Fallon Road (as well as the proposed extension to North Canyons Parkway). On-street parking is not permitted along this roadway and the posted speed limit is 45 mph in the vicinity of the project. Dublin Boulevard is proposed to be extended connecting from its current terminus at Fallon Road to North Canyons Parkway in Livermore.

Fallon Road/El Charro Road is a north-south divided roadway that widens from four lanes south of Central Parkway to six lanes to the north; south of I-580, Fallon Road becomes El Charro Road within the City of Pleasanton. Fallon Road is classified as an arterial roadway near the project site. The roadway primarily serves residential land uses within the City of Dublin, with some retail located near I-580. On-street parking is not permitted along this roadway. The posted speed limit is 45 mph in the vicinity of the project.

Transit Facilities

The project area is served by Tri-Valley Wheels, which provides fixed-route bus service operated by the Livermore Amador Valley Transit Authority (LAVTA) to Dublin, Livermore, Pleasanton, and neighboring communities. Wheels also offers a Dial-A-Ride Paratransit service to eligible patrons in Dublin, available wherever fixed-route service is operating. Three routes directly serve the area surrounding the project – Route 2, Route 30R (Rapid), and Route 501 (School Route).

The area is also served by Bay Area Rapid Transit (BART), with the nearest station being Dublin/Pleasanton which is located approximately four miles west of the site. Table M provides details about the bus service that serves the project area.

³³ The City of Dublin General Plan. *Chapter 5: Land Use and Circulation – Circulation and Scenic Highways Element*. Amended 2022. <https://www.dublin.ca.gov/DocumentCenter/View/7799/Chapter-5-May-2020?bId=>

Table M. Existing Transit Facilities

Route	Route Type	Major Destinations	Day	Times	Frequency
2	Fixed Route	E. Dublin/Pleasanton BART, Dublin Ranch, Emerald Glen Park, Fallon Middle School	Weekdays	One AM and one PM trip to serve Fallon Middle School (effective August 2021)	2 per day
30R	Rapid Route	Lawrence Livermore National Laboratory, East Ave., Livermore Transit Center, Portola Park and Ride, Las Positas College, N. Canyons, Dublin Blvd, E. Dublin BART, Dublin Civic Center, W. Dublin BART	Weekdays	5:00 AM to 11:00 PM	Every 30 minutes
			Weekends	5:00 AM to 11:00 PM	Hourly
501	School Route	Positano, Fallon Road, Silvera Ranch, Tassajara Road, Central Pwyk, Dublin HS	Weekdays	One AM and one PM trip for each route	2 per day

Source: wheelsbus.com

Bicycle and Pedestrian Facilities

Sidewalks and Class II bike lanes are provided along Tassajara Road adjacent to the project site.

Previous CEQA Documents

Eastern Dublin EIR

The Eastern Dublin EIR identified potentially significant impacts related to increased traffic associated with implementation of the EDSP, including impacts to freeway, intersection, and roadway operations, transit service extensions, and potential safety hazards for pedestrians and bicycles at street crossings. Mitigation measures were identified to reduce most transportation impacts to a less than significant level. These mitigation measures require construction of new roadways, widening of existing roadways, and improvements to local freeway facilities to accommodate increased vehicle traffic associated with proposed development in Eastern Dublin.

Several traffic impacts were determined to be significant and unavoidable, even with implementation of mitigation. These impacts include impacts to I-580 between Tassajara Road and Airway Boulevard (Impact 3.3/B), cumulative freeway impacts (Impact 3.3E), impacts to the Santa Rita Road/I-580 eastbound ramps (Impact 3.3/I) and cumulative impacts to Tassajara Road (Impact 3.3/N). Applicable mitigation measures from the Eastern Dublin EIR include:

MM 3.3/2.0 (Policy 5-21). Require all non-residential projects with 50 or more employees within the Eastern Dublin General Plan Amendment and Specific Plan area to

participate in a Transportation Systems Management (TSM) program. A TSM program would include strategies to reduce the use of single-occupant vehicles such as on-site distribution of transit information and passes, provision of shuttle services to and from BART stations, participation in regional ridesharing services, preferential parking for vanpools and carpools, and flexible or staggered work hours.

MM 3.3/2.1 The Project shall contribute a proportionate amount to regional transportation mitigation programs as determined by the current study by the Tri-Valley Transportation Council. Regional mitigation measures may include implementation of enhanced rail and feeder bus transit services, construction or upgrading of alternative road corridors to relieve demand on the I-580 and I-680 freeways.

MM 3.3/3.0 The Project shall contribute to the construction of auxiliary lanes on I-580 between Tassajara Road and Airway Boulevard. The auxiliary lanes would provide LOS E operations between Tassajara Road and Fallon Road, and LOS D operations between Fallon Road and Airway Boulevard.

MM 3.3/4.0 The Project should contribute a proportionate share to planned improvements at the I-580 /I-680 interchange and the associated mitigation on adjacent local streets. The improvements would provide additional capacity on I-680 north of I-580 and would provide LOS D operations.

MM 3.3/5.0 Local jurisdictions shall require that future developments participate in regional transportation mitigation programs as determined by the current study by the Tri-Valley Transportation Council.

MM 3.3/6.0 The City of Dublin shall coordinate construction of additional lanes on all approaches at the intersection. The required lanes on the northbound approach on Dougherty Road include two left-turn lanes, three through lanes (one more than existing) and one right-turn lane (one more than existing). The required lanes on the southbound approach on Dougherty Road include two left-turn lanes (one more than existing), three through lanes (one more than existing) and one right-turn lane. The required lanes on the eastbound approach on Dublin Boulevard include one left-turn lane, three through-lanes (one more than existing) and one right-turn lane. The required lanes on the westbound approach on Dublin Boulevard include two left-turn lanes, three through-lanes and one right-turn lane. The Project shall contribute a proportionate share of the improvement costs. The improvements would provide LOS D operations.

MM 3.3/7.0 The City of Dublin shall coordinate with the City of Pleasanton and Caltrans to restripe the I-580 eastbound off-ramp to provide two left-turn lanes and one right-turn lanes (existing lanes are one left-turn lane and two right-turn lanes). The Project shall contribute a proportionate share of the improvement costs. The improvements would provide LOS C operations.

MM 3.3/8.0 The City of Dublin shall coordinate with Ca/trans to widen the I-580 westbound off-ramp to provide two left-turn lanes and two right-turn lanes, and to modify the northbound approach to provide three through lanes. The Project shall contribute a proportionate share of the improvement costs. The improvements would provide LOS B operations.

MM 3.3/9.0 The City of Dublin shall coordinate with the City of Pleasanton and Caltrans to widen the I-580 eastbound off-ramp to provide two left-turn lanes and two right-turn lanes. These improvements would provide LOS E operations. Further improvement to the level of service could be provided by prohibiting left turns from southbound Santa Rita Road to eastbound Pimlico Drive during peak periods. This left-turn prohibition would require out-of-direction travel for drivers wishing to access Pimlico Drive but would provide level of service D operations. The Project shall be required to contribute a proportionate share of the improvement costs.

MM 3.3/ 10.0 The City of Dublin shall coordinate with the City of Livermore to modify the intersection to provide three through-lanes and a right-turn lane eastbound, and two left-turn lanes and two through-lanes westbound. The Project shall contribute proportionate share of the improvement costs. The improvements would provide LOS operations.

MM 3.3/ 11.0 The City of Dublin shall coordinate with the City of Livermore and Caltrans to widen the Airway Boulevard overcrossing of I-580 by 12 feet to provide adequate storage for northbound left-turns and widen of the off-ramp to provide one left and one left-right lane. The Project shall contribute a proportionate amount toward the cost of these improvements. The improvements would provide LOS D operations.

MM 3.3/ 12.0 The City of Dublin shall coordinate with Ca/trans to ensure that modifications to the I-580 interchange at Fallon Road/El Charro Road include provisions for unimpeded truck movements to and from El Charro Road. The Project shall contribute a proportionate share of improvement costs.

MM 3.3/ 15.2 The Project shall contribute a proportionate amount to the capital and operating costs of transit service extensions.

MM 3.3/ 16.1 Locate pedestrian and bicycle paths so that their crossings of major arterial streets coincide with signalized street intersections, providing a signalized pedestrian and bicycle crossing of the major street.

Project Impacts and Mitigation Measures

(a) Conflict with applicable transportation plans standards, including bicycle and pedestrian facilities

No New Impact. As outlined in the Project Description, the proposed project would provide space to host the school's existing performance art shows and events, as well as an improved

space for high school commencement ceremonies. Currently, the school hosts approximately eight events annually, including the high school graduation ceremony. These events occur in the evenings and on weekends. Implementation of the proposed project would not change the frequency or capacity of such events but would provide a new, dedicated facility in which to host these events. As such, the proposed project would not generate additional vehicle trips to/from the school beyond what currently occurs under existing conditions.

The proposed project would not alter or interfere with transit, bicycle or pedestrian facilities. The proposed project would maintain existing sidewalks along Tassajara Road. Paved pedestrian walkways would be provided to connect the parking area with the proposed performing arts center, as well as, to provide pedestrian connections to proposed sidewalks along Tassajara Road. Therefore, impacts to bicyclists, pedestrians, and transit service providers resulting from implementation of the proposed project would remain less than significant and the proposed project would not result in new significant or substantially more severe impacts related to alternative forms of transportation.

The project does not propose substantial changes that were not previously analyzed in the Eastern Dublin EIR that would require major changes to the Eastern Dublin EIR. Based on the information in the Eastern Dublin EIR and this environmental analysis, there would be no new impacts related to Conflict with applicable transportation plans standards, including bicycle and pedestrian facilities beyond what has been analyzed in the previous Eastern Dublin EIR, and no other CEQA standards for supplemental review are met. Therefore, no further environmental review is required.

(b) Conflict with CEQA Section 15064.3 (b)

No New Impact. Since certification of the Eastern Dublin EIR, the issue of vehicle miles traveled (VMT) has become a more prominent issue of concern as evidenced by passage of SB 743 in 2013. Previously, CEQA analysis was conducted using a level of service (LOS) measurement that evaluated traffic delay. As specified under SB 743 and implemented under Section 15064.3 of the State CEQA Guidelines (effective December 28, 2018), VMT is the required metric to be used for identifying CEQA impacts and mitigation. In December 2018, the Office of Planning and Research (OPR) published a Technical Advisory on Evaluating Transportation Impacts, including guidance for VMT analysis. The Office of Administrative Law approved the updated CEQA Guidelines and lead agencies were given until July 1, 2020, to implement the updated guidelines for VMT analysis.

The topic of the project's contribution to vehicle miles traveled (VMT) was not analyzed in the Eastern Dublin EIR. Because the Eastern Dublin EIR has been certified, the determination of whether VMT needs to be analyzed for this project is governed by the law on supplemental or subsequent EIRs (Public Resources Code section 21166 and CEQA Guidelines, Sections 15162 and 15163). VMT is not required to be analyzed unless it constitutes new information of substantial importance that was not known and could not have been known at the time the previous environmental documents were certified as complete (Public Resources Code Section 21166 and CEQA Guidelines Section 15162 and 15163). VMT was known at the time of the

certification of the Eastern Dublin EIR and could have been analyzed. A change in regulations for impact analysis under CEQA is not a trigger for further environmental review under supplemental review standards. Therefore, no supplemental environmental analysis of the project's impacts on this issue is required under CEQA.

(c) Substantially increase hazards due to a design feature

No New Impact. New vehicular access is proposed from Tassajara Road via a right-in only driveway at the southern end of the project site with a connection to the existing school parking lot to the north, which has a signalized entry and exit on Tassajara Road. The proposed additional parking area, consisting of 126 spaces, would be located east and south of the proposed performing arts center. The design, construction, and maintenance of project site access locations would be in compliance with the City's Municipal Code. The project does not propose substantial changes that were not previously analyzed in the Eastern Dublin EIR that would require major changes to the Eastern Dublin EIR. Based on the information in the Eastern Dublin EIR and this environmental analysis, with adherence to applicable regulatory requirements, there would be no new impacts related to design hazards beyond what has been analyzed in the previous Eastern Dublin EIR, and no other CEQA standards for supplemental review are met. Therefore, no further environmental review is required.

(d) Result in inadequate emergency access

No New Impact. The proposed project would not result in inadequate emergency access. Emergency vehicle access to the project site would continue to be provided via Tassajara Road. The design, construction, and maintenance of project site access locations would be in compliance with the City's Municipal Code and would be required to meet all emergency access standards. In addition, through Site Plan Review, emergency services would review proposed plans to ensure that emergency vehicle access and circulation is adequate. The project does not propose substantial changes that were not previously analyzed in the Eastern Dublin EIR that would require major changes to the Eastern Dublin EIR. Based on the information in the Eastern Dublin EIR and this environmental analysis, with adherence to applicable regulatory requirements, there would be no new impacts to emergency access beyond what has been analyzed in the previous Eastern Dublin EIR, and no other CEQA standards for supplemental review are met. Therefore, no further environmental review is required.

Conclusion

The project does not propose substantial changes that were not previously analyzed in the Eastern Dublin EIR that would require major changes to the Eastern Dublin EIR. Based on the information in the Eastern Dublin EIR and this environmental analysis, with adherence to applicable regulatory requirements and mitigation measures identified in the Eastern Dublin EIR, there would be no new impacts to transportation beyond what has been analyzed in the previous Eastern Dublin EIR, and no other CEQA standards for supplemental review are met. Therefore, no further environmental review is required.

Tribal Cultural Resources

ENVIRONMENTAL IMPACTS Issues	Potentially Significant Issues	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No New Impact
17. TRIBAL CULTURAL RESOURCES. Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:				
a) Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k), or				X
b) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resource Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.				X

Environmental Setting

Assembly Bill 52, which became law on January 1, 2015, provides for consultation with California Native American tribes during the CEQA environmental review process, and equates significant impacts to “tribal cultural resources” with significant environmental impacts. Public Resources Code (PRC) Section 21074 states that “tribal cultural resources” are:

Sites, features, places, cultural landscapes, sacred places, and objects with cultural value to a California Native American tribe and are one of the following:

- Included or determined to be eligible for inclusion in the California Register of Historical Resources.
- Included in a local register of historical resources as defined in subdivision (k) of PRC Section 5020.1.
- A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of PRC Section 5024.1. In applying the criteria set forth in subdivision (c) of PRC Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.

A “historical resource” (PRC Section 21084.1), a “unique archaeological resource” (PRC Section 21083.2(g)), or a “nonunique archaeological resource” (PRC Section 21083.2 (h)) may also be a tribal cultural resource if it is included or determined to be eligible for inclusion in the California Register.

The consultation provisions of the law require that a public agency consult with local Native American tribes that have requested placement on that agency’s notification list for CEQA projects. Within 14 days of determining that a project application is complete, or a decision by a public agency to undertake a project, the lead agency must notify tribes of the opportunity to consult on the project, should a tribe have previously requested to be on the agency’s notification list. California Native American tribes must be recognized by the California Native American Heritage Commission as traditionally and culturally affiliated with the project site and must have previously requested that the lead agency notify them of projects. Tribes have 30 days following notification of a project to request consultation with the lead agency.

The purpose of consultation is to inform the lead agency in its identification and determination of the significance of tribal cultural resources. If a project is determined to result in a significant impact on an identified tribal cultural resource, the consultation process must occur and conclude prior to adoption of a Negative Declaration or Mitigated Negative Declaration, or certification of an EIR (PRC Sections 21080.3.1, 21080.3.2, 21082.3).

In March 2022, the City provided formal notification to the California Native American tribe that has requested notification under Assembly Bill 52. No response was received and no formal tribal consultation was requested.

Previous CEQA Documents

The topic of the project’s potential impacts to tribal cultural resources was not specifically analyzed in the Eastern Dublin EIR. Since certification of the Eastern Dublin EIR, the topic of Tribal Cultural Resources has been added as a new category in the CEQA checklist. However, the Eastern Dublin EIR analyzed prehistoric and historic resources and included mitigation measures related to historical and archaeological resources. These measures are listed in the cultural resources section of this Initial Study Checklist.

Because the Eastern Dublin EIR has been certified, the determination of whether tribal cultural resources need to be analyzed for this proposed project is governed by the law on supplemental or subsequent EIRs (Public Resources Code section 21166 and CEQA Guidelines, Sections 15162 and 15163). Tribal cultural resources are not required to be analyzed under those standards unless it constitutes “new information of substantial importance, which was not known and could not have been known at the time the previous EIR was certified as complete” (CEQA Guidelines Sec. 15162 (a) (3)).

The topic of the project’s potential impacts to tribal cultural resources was not specifically analyzed in the EDSP EIRs; however, the issue of tribal cultural resources was widely known prior to the certification of these EIRs. Section 106 of the National Preservation Act, established

in 1966, requires tribal consultation in all steps of the process when a federal agency project or effort may affect historic properties that are either located on tribal lands, or when any Native American tribe or Native Hawaiian organization attaches religious or cultural significance to the historic property, regardless of the property's location. Further, tribal cultural resources have been considered in the evaluation of impact to historical and archaeological resources since CEQA was enacted.

Project Impacts and Mitigation Measures

(a) Listed or eligible for listing in the California Register of Historical Resources

No New Impact. As described in Section 5, Cultural Resources, the project site does contain a historic-period residence, which is over 50 years old. The residence and associated out-buildings were evaluated for significance as a historical resource. However, these resources were determined to be not eligible, either individually or as a group, for inclusion on the California Register because it is not associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage; associated with the life of persons important in our past; is not notable for its architectural or design qualities or as an important example of its architectural style; and is unlikely to yield information important to the history of the City of Dublin, the San Ramon Valley, Alameda County, or California. Although these existing buildings will be demolished as part of the proposed project, these buildings do not qualify as historical resources for the purposes of CEQA because they do not meet the eligibility criteria for inclusion on the California Register. As such, there are no known significant archaeological or tribal cultural resources within the project site and the proposed project would not cause a substantial adverse change in the significance of a tribal cultural resource defined as a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American Tribe, and that is listed or eligible for listing in the CRHR or in a local register of historical resources as defined in Public Resources Code (PRC) Section 5020.1(k). The project does not propose substantial changes that were not previously analyzed in the Eastern Dublin EIR that would require major changes to the Eastern Dublin EIR. Based on the information in the Eastern Dublin EIR and this environmental analysis, with adherence to applicable regulatory requirements, there would be no new impacts to tribal cultural resources beyond what has been analyzed in the previous Eastern Dublin EIR, and no other CEQA standards for supplemental review are met. Therefore, no further environmental review is required.

(b) Significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1

No New Impact. No archaeological resources were identified on the project site as part of the cultural resources study. Therefore, the City, in its role as lead agency, has determined that the project site is not a resource significant to a California Native American tribe. Development proposed as part of the current project would be consistent with the development previously analyzed in the Eastern Dublin EIR. As described in Section 5, Cultural Resources, implementation of Mitigation Measure 3.9/5.0 as identified in the Eastern Dublin EIR would

reduce any potential impacts to archaeological and/or Native American resources to a less-than-significant level. The project does not propose substantial changes that were not previously analyzed in the Eastern Dublin EIR that would require major changes to the Eastern Dublin EIR. Based on the information in the Eastern Dublin EIR and this environmental analysis, with adherence to applicable regulatory requirements, there would be no new impacts to tribal cultural resources beyond what has been analyzed in the previous Eastern Dublin EIR, and no other CEQA standards for supplemental review are met. Therefore, no further environmental review is required.

Conclusion

No places, objects, or the like with cultural value to a California Native American Tribe have been previously identified in the project area and such artifacts are unlikely to be present.

The project does not propose substantial changes that were not previously analyzed in the Eastern Dublin EIR that would require major changes to the Eastern Dublin EIR. Based on the information in the Eastern Dublin EIR and this environmental analysis, with adherence to applicable regulatory requirements, there would be no new impacts to tribal cultural resources beyond what has been analyzed in the previous Eastern Dublin EIR, and no other CEQA standards for supplemental review are met. Therefore, no further environmental review is required.

Utilities and Service Systems

ENVIRONMENTAL IMPACTS Issues	Potentially Significant Issues	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No New Impact
18. UTILITIES AND SERVICE SYSTEMS. Would the project:				
a) Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities the construction or relocation of which could cause significant environmental effects?				X
b) Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?				X
c) Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project projected demand in addition to the provider's existing commitments?				X
d) Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?				X
e) Comply with federal, state, and local statutes and regulations related to solid waste?				X

Environmental Setting

A variety of local and regional providers in this area operate and maintain utility and service system facilities associated with electricity, water, stormwater, wastewater, solid waste, communications, and natural gas. As outlined in the Project Description, the project site is currently served by the Dublin San Ramon Services District (DSRSD) and PG&E.

Water

The Dublin San Ramon Services District (DSRSD) provides water service at the project site. DSRSD is responsible for providing both potable and recycled water to the City of Dublin, and the Dougherty Valley area of the City of San Ramon in Contra Costa County. DSRSD's water service area also includes Camp Parks, the Federal Correctional Institution (FCI), and Alameda County's Santa Rita Jail. Zone 7 supplies treated potable water to DSRSD. Treated potable water enters DSRSD's distribution system from five metered turnouts from the Zone 7 transmission system.

To reduce the demand for potable water, DSRSD promotes water recycling and is a member of the WaterReuse Association. In 1995, DSRSD and EBMUD, through a joint powers agreement, formed the DSRSD-EBMUD Recycled Water Authority (DERWA). DERWA serves as a wholesaler to deliver recycled water to DSRSD and EBMUD, who in turn deliver the recycled water to their respective service areas. DERWA's San Ramon Valley Recycled Water Project (SRVRWP) provides a backbone distribution system that delivers recycled water to both DSRSD and EBMUD distribution systems. DSRSD's recycled water treatment facilities deliver recycled water to the SRVRWP. Recycled water is produced at DSRSD's wastewater treatment plant at the Recycled Water Treatment Facility (RWTF). The RWTF produces recycled water that meets the California Title 22 requirements for unrestricted reuse.

Wastewater

Wastewater collection and treatment services are also provided by DSRSD for the City of Dublin, City of Pleasanton, Camp Parks, FCI, Santa Rita Jail, and the southern portion of San Ramon. DSRSD owns and operates a wastewater treatment plant in Pleasanton that has a capacity of 17 million gallons per day (mgd). The existing wastewater service area encompasses approximately 13,340 acres, or 20.85 square miles. Within the wastewater service area there are currently 207 miles of gravity mains, one permanent lift station, and one temporary lift station. The permanent lift station has 26 feet of force main.

Stormwater

Drainage and flood control in the Eastern Dublin area is the responsibility of the City of Dublin and Zone 7. Zone 7 is responsible for master planning, overseeing construction coordination, and maintaining major storm drain channels and culverts in Eastern Dublin. The City has jurisdiction and maintenance responsibility for local storm drains that discharge to the Zone 7 flood control system. Runoff from the project area drains mostly via overland flow, which eventually collects just north and east of the Fallon Road/I-580 Interchange where it then flows, via a double box culvert west under Fallon Road.

Electricity

The East Bay Community Energy provides electricity to Dublin over PG&E's distribution system. PG&E provides natural gas service to the San Francisco Bay region and serves the project site.

Solid Waste

The City of Dublin has a Collection Services Agreement with a private solid waste collection company for residential and commercial garbage collection. The City also has comprehensive recycling and organics collection programs. All single-family residences are provided with three stream collection containers (landfill, recycle, organics). As of January 1, 2022, all service accounts (with a few exceptions) are required to subscribe to three-stream collection services due to State legislation (SB 1383).

Solid waste generated within the City is deposited at the Altamont Landfill which has a total estimated permitted capacity of 62 million cubic yards. The Altamont Landfill is approximately 26 percent full and is estimated to reach capacity in January 2029.

Previous CEQA Documents

Eastern Dublin EIR

The Eastern Dublin EIR identified potential significant impacts related to lack of a wastewater collection system, extension of a sewer trunk line with capacity to serve new developments, limited treatment plant capacity and wastewater disposal capacity, increased energy use for wastewater treatment and wastewater disposal, potential failure of the export disposal system, pump station noise and odors, storage basin odors and potential failure, recycled water system operations, recycled water storage failure, loss of recycled water system pressure, and secondary impacts from recycled water system operation. Mitigation measures were identified to reduce most wastewater impacts to a less than significant level. Impacts associated with increased energy use for wastewater treatment and disposal were determined to be significant and unavoidable, even with implementation of mitigation. The following mitigation measures would apply to the proposed project:

MM 3.5/1.0 (Program 9P). Connection to Public Sewers. Require that all development in the Specific Plan area be connected to public sewers. Exceptions to this requirement, in particular septic tank systems, will only be allowed upon receipt of written approval from the Alameda County Environmental Health Department and DSRSD.

MM 3.5/4.0 (Program 9M). DSRSD Service. Require a "will-serve" letter from DSRSD prior to permit approval for grading.

MM 3.5/5.0 (Program 9N). DSRSD Standards. Require that design and construction of all wastewater systems be in accordance with DSRSD standards.

The Eastern Dublin EIR also identified potential significant impacts related to overdraft of local groundwater resources, increased demand for water, additional treatment plant capacity, lack of a water distribution system, inducement of substantial growth, increase in energy usage through operation of the water distribution system, potential water storage reservoir failure, potential loss of system pressure, and potential pump station noise. Mitigation measures were identified to reduce most water impacts to a less than significant level. Impacts associated with increased energy use for water distribution and population growth were determined to be significant and unavoidable, even with implementation of mitigation. The following mitigation measures would apply to the proposed project:

MM 3.5/25.0 Encourage all developments in the Specific Plan and Project to connect to the DSRSD water system.

MM3.5/26.0 (Program 9A). Water Conservation. Require the following as conditions of project approval in eastern Dublin:

- Use of water-conserving devices such as low-flow shower heads, faucets, and toilets.

- Support implementation of the DSRSD Water Use Reduction Plan where appropriate.
- Water efficient irrigation systems within public rights-of-way, median islands, public parks, recreation areas and golf course areas (see Program 9B on Water Recycling).
- Drought resistant plant palettes within public rights-of-way, median islands, public parks, recreation areas and golf course areas.

MM3.5/27.0 (Program 9B). Water Recycling. Require the following as conditions of project approval in eastern Dublin:

- Implementation of DSRSD and Zone 7 findings and recommendations on uses of recycled water to augment existing water supplies.
- Work with DSRSD to explore use of recycled water in eastern Dublin through potential construction of a recycled water distribution system. Construction of such a recycled water system will require approval of the use of recycled water for landscape irrigation by DSRSD, Zone 7, and the San Francisco Bay Regional Water Quality Control Board.

MM 3.5/37.0 (Program 9E). DSRSD Standards. Require that design and construction of all water system facility improvements be in accordance with DSRSD standards.

MM 3.5/38.0 (Program 9G). DSRSD Service. Require a "will-serve" letter from DSRSD prior to grading permit approval.

Potentially significant impacts related to storm drainage identified in the Eastern Dublin EIR are described in Section 9.0, Hydrology and Water Quality.

Project Impacts and Mitigation Measures

(a) **Require relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas or telecommunications facilities**

No New Impact. The proposed project would not require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunication facilities beyond that which was already anticipated in the Eastern Dublin EIR. The proposed project is not anticipated to generate greater demand for utility services than the residential development proposed as part of the EDSP and evaluated in the Eastern Dublin EIR as the proposed performing arts center would provide a dedicated facility to accommodate existing events that currently occur at the Quarry Lane School.

As described below, DSRSD provides potable water to the project site through an existing water main in Tassajara Road. DSRSD's 2020 Urban Water Management Plan (UWMP) describes the existing and planned sources of water available in the water system service area through the

year 2040. The UWMP has determined that water supplies would be adequate during normal year, single-dry year, and multiple-dry year scenarios through 2040 based on the development of the land uses within the DSRSD's service area, including the City of Dublin. The proposed project would not substantially increase demand for water and would therefore not exceed the capacity of existing water treatment facilities. The proposed project would not require the construction of new water treatment facilities, or the expansion of existing facilities, other than those already planned as part of the UWMP. The proposed project would include the installation of new water lines on the site that would connect to the existing water main within Tassajara Road. Proposed water lines would include 8-inch water lines for fire suppression and 4-inch water lines for domestic water use. The proposed project would connect directly to existing mains, which have sufficient capacity to accommodate the proposed project.

DSRSD maintains existing sanitary sewer lines within the vicinity of the project site, including the existing sanitary sewer main located within Tassajara Road. New 4-inch, sanitary sewer lines would be installed within the project site and would tie into the existing sanitary sewer main within Tassajara Road. The new sanitary sewer lines installed within the project site would be constructed in conformance with City and DSRSD standards, and their construction would not cause significant environmental effects.

The project site is largely undeveloped and contains minimal impervious surfaces. Upon construction of the proposed project, approximately 70 percent of the project site would be covered with impervious surfaces, and the remaining 30 percent would be covered by pervious surfaces, consisting of landscaped and stormwater retention areas. The proposed project would include approximately 3,460 square feet of bioretention space on the project site that would be used for stormwater quality control. The proposed project would include approximately 18 bioretention basins and storm drains throughout the project site, which would connect to existing storm drain pipeline in Tassajara Road. Proposed storm drainage facilities would conform with the Alameda County C.3 Stormwater Technical guidelines and requirements.

Electricity and gas service is provided to the project site by the Pacific Gas & Electric Company (PG&E). As described in the Project Description, lighting is proposed to promote security and safety for park users and to accommodate nighttime use of building facilities and parking security. Proposed lighting would tie into existing electric utilities within Tassajara Road and is not anticipated to generate substantial additional demand such that new facilities or expansion of facilities would be required.

The proposed project would include connections to existing utilities that run adjacent to the project site within Tassajara Road. These connections would not be considered "major" lines because these improvements would be made as additions to the existing infrastructure. Further, these connections would be conducted in accordance with each utility purveyor's specification and accordance with City guidelines.

On-site utility infrastructure necessary to serve the proposed project—including water, sanitary sewer, drainage, water quality treatment, and dry utilities (e.g., electricity, natural gas, cable)—would be installed within the project site and would connect to the existing utility lines within

Tassajara Road. No new or expanded utility lines or facilities are required off-site, except as needed for the utility connections.

The project does not propose substantial changes that were not previously analyzed in the Eastern Dublin EIR that would require major changes to the Eastern Dublin EIR. Based on the information in the Eastern Dublin EIR and this environmental analysis, with adherence to applicable regulatory requirements, there would be no new impacts related to expanded water, wastewater, stormwater drainage, electric power, natural gas, or telecommunication facilities beyond what has been analyzed in the previous Eastern Dublin EIR, and no other CEQA standards for supplemental review are met. Therefore, no further environmental review is required.

(b) Sufficient water supply

No New Impact. Since the adoption of the Eastern Dublin EIR, the DSRSD has updated the UWMP (in 2020), which accounts for build out of the Eastern Dublin Area, including the project site. The 2020 UWMP determined that there would be adequate water supplies to meet demand through 2040 with existing entitlements. Additionally, consistent with the DSRSD District Code, the project applicant would be required obtain a certificate of capacity rights from DSRSD, prior to issuance of a building permit. The certificate of capacity rights, which is part of the entitlement review process, ensures the DSRSD can adequately serve the proposed project.

Currently, DSRSD's primary water supply source is purchased potable water from Zone 7, augmented by recycled water produced at DSRSD's RWTF. DSRSD also has a groundwater pumping quota (GPQ) from the local groundwater basin, pumped on its behalf by Zone 7, the local groundwater basin manager. Imported water from the State Water Project, which is owned and operated by the Department of Water Resources, is by far Zone 7's largest water source, providing approximately 90 percent of the treated water supplied to its customers on an annual average basis. The proposed project would be served by these systems. DSRSD anticipates the same water supply mix to be available through 2040. With the projects and programs implemented by DSRSD and Zone 7, water supplies are projected to meet demands.

As described above, the type and intensity of development associated with the proposed project (e.g., performing arts center to serve the existing school) would be less than assumed for the project site in the City's General Plan (e.g., medium density residential), including the EDSP and accounted for in the UWMP. As stated in the UWMP, DSRSD can meet its water demand under multiple dry years with diversified supply and conservation measures.

The project does not propose substantial changes that were not previously analyzed in the Eastern Dublin EIR that would require major changes to the Eastern Dublin EIR. Based on the information in the Eastern Dublin EIR and this environmental analysis, with adherence to applicable regulatory requirements, there would be no new impacts related to water supply beyond what has been analyzed in the previous Eastern Dublin EIR, and no other CEQA

standards for supplemental review are met. Therefore, no further environmental review is required.

(c) Sufficient wastewater capacity

No New Impact. Wastewater collection and treatment services are provided by The Dublin San Ramon Services District (DSRSD) serving 196,000 customers. DSRSD is the purveyor of wastewater collection and treatment services within the City of Dublin. The wastewater collection system includes over 170 miles of sanitary sewers. Disposal of treated wastewater is under the jurisdiction of the Livermore-Amador Valley Water Management Authority (LAVWMA). Wastewater collected from the DSRSD service area travels by gravity to the DSRSD wastewater treatment plant which is located in the City of Pleasanton. The plant has a rated dry-weather capacity of 17.0 mgd. Disposal of treated effluent from the treatment plant in Pleasanton is the responsibility of LAVWMA who exports secondary treated wastewater to the East Bay Dischargers Authority interceptor pipeline for ultimate discharge to the San Francisco Bay via a deepwater outfall. LAVWMA facilities are designed to export a maximum flow of 41.2 mgd during wet weather events.

Since the adoption of the Eastern Dublin EIR, the DSRSD has updated the Wastewater Collection System Master Plan (in 2017), which accounts for build out of the project site. As described above, the type and intensity of development associated with the proposed project (e.g., performing arts center to serve the existing school) would be less than assumed for the project site in the City's General Plan (e.g., medium density residential), including the EDSP and accounted for in the Wastewater Collection System Master Plan. The proposed project would result in a very minor contribution to the daily permitted capacity of the DSRSD's wastewater treatment plant and would not exceed the plant capacity.

The project does not propose substantial changes that were not previously analyzed in the Eastern Dublin EIR that would require major changes to the Eastern Dublin EIR. Based on the information in the Eastern Dublin EIR and this environmental analysis, with adherence to applicable regulatory requirements, there would be no new impacts related to wastewater capacity beyond what has been analyzed in the previous Eastern Dublin EIR, and no other CEQA standards for supplemental review are met. Therefore, no further environmental review is required.

(d-e) Adequate landfill and compliance

No New Impact. Operation of the proposed project is not anticipated to generate a significant amount of solid waste. Users of the Quarry Lane School Performing Arts Center would dispose of garbage, but not in amounts that would greatly exceed average per capita garbage generation rates. In addition, recycling receptacles would be located throughout the facility, allowing the proposed project to be in full compliance with waste diversion goals mandated by the California Integrated Waste Management Act.

The amount of solid waste generated by both users of the Performing Arts Center and construction of the facility or infrastructure would not substantially decrease the amount of

space in the Altamont Landfill. Solid waste disposal off-site would comply with all local, State, and federal requirements.

The project does not propose substantial changes that were not previously analyzed in the Eastern Dublin EIR that would require major changes to the Eastern Dublin EIR. Based on the information in the Eastern Dublin EIR and this environmental analysis, with adherence to applicable regulatory requirements, there would be no new impacts related to solid waste beyond what has been analyzed in the previous Eastern Dublin EIR, and no other CEQA standards for supplemental review are met. Therefore, no further environmental review is required.

Conclusion

The project does not propose substantial changes that were not previously analyzed in the Eastern Dublin EIR that would require major changes to the Eastern Dublin EIR. Based on the information in the Eastern Dublin EIR and this environmental analysis, with adherence to applicable regulatory requirements and mitigation measures identified in the Eastern Dublin EIR, there would be no new impacts to utilities and service systems beyond what has been analyzed in the previous Eastern Dublin EIR, and no other CEQA standards for supplemental review are met. Therefore, no further environmental review is required.

Wildfire

ENVIRONMENTAL IMPACTS Issues	Potentially Significant Issues	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No New Impact
18. WILDFIRE. If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project:				
a) Substantially impair an adopted emergency response plan or emergency evacuation plan?				X
b) Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?				X
c) Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?				X
d) Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?				X

Environmental Setting

The site is within the Diablo Range, an elongated system of northwest trending mountains, hills, ridges, and narrow intervening valleys formed within the Coast Ranges of Central California.

The Diablo Range is part of the Coast Range Geomorphic province and is roughly parallel to the northwest-trending trace of the Calaveras Fault. The west-trending Dublin Canyon, cuts through the foothills with numerous creeks and small streams originating in the East Bay hills.

As described in Section 8, Hazards and Hazardous Materials, a portion of the project site is located within a moderate Fire Hazard Severity Zone within a SRA, as mapped by CAL FIRE.

Previous CEQA Documents

The Eastern Dublin EIR did not specifically analyze impacts for wildfires as it was not a separate topic for analysis when the Eastern Dublin EIR was completed. Public services impacts and mitigation measures, some of which relate to the provision of fire services pertain to wildfires, were identified. The following mitigation measure would apply to the proposed project:

MM 3.5/9.0 Incorporate DRFA recommendations on project design related to access, water pressure, fire safety and prevention into the requirements for development

approval. Required that the following DRFA design standards are incorporated where appropriate:

- Use of non-combustible roof materials in all new construction.
- Available capacity of 1,000 gallons per minute (gpm) at 20 pounds per square inch (PSI) fire flow from project fire hydrants on public water mains. For groupings of one-family and small two-family dwellings not exceeding two stories in height, the fire flow requirements are a minimum of 1,000 gpm. Fire flow requirements for all other buildings will be calculated based on building size, type of construction, and location.
- A buffer zone along the backs of homes which are contiguous with the wildland are. This buffer zone is to be landscaped with irrigated (wet banding) or equivalent fire-resistive vegetation.
- Compliance with DRFA minimum road widths, maximum street slopes, parking recommendations, and secondary access road requirements.
- Require residential structures outside the DRFA's established response time and zone to include fire alarm systems and sprinklers.

Project Impacts and Mitigation Measures

(a) Impair an emergency response plan

No New Impact. A portion of the project site is located within a moderate Fire Hazard Severity Zone within an SRA as mapped by CALFIRE. However, as outlined in the Project Description, the proposed project would provide a new facility to host previously existing events for Quarry Lane School and would not include any growth in total student enrollment or an expansion of existing school operations. The proposed project would not alter or block adjacent roadways, and implementation of the proposed project would not be expected to impair the function of nearby emergency evacuation routes. In addition, operation of the proposed project would not cause permanent alterations to vehicle circulation routes and patterns or impede public access or travel upon public rights-of-way. As part of Site Design Review, plan review and approval by the Alameda County Fire District is required. Internal roadways and ingress/egress would be required to meet State and local standards regarding turning radius, road width, and emergency vehicle access. In the event of an emergency on the site, employees, students, and/or school visitors could exit the site off Tassajara Road. Once off the project site, employees, students, and/or school visitors could access I-580 from Tassajara Road to exit the City and region.

The project does not propose substantial changes that were not previously analyzed in the Eastern Dublin EIR that would require major changes to the Eastern Dublin EIR. Based on the information in the Eastern Dublin EIR and this environmental analysis, with adherence to applicable regulatory requirements, there would be no new impacts related to impairment of

an emergency response plan beyond what has been analyzed in the previous Eastern Dublin EIR, and no other CEQA standards for supplemental review are met. Therefore, no further environmental review is required.

(b) Exposure to wildfire

No New Impact. The project site is relatively flat with expansive rolling hills located to the east. Prevailing winds are typically from the west between February and November and from the north from November to February in the City.

Construction of the proposed project would involve the use of some flammable materials such as gasoline, diesel fuel, hydraulic oils, paints, solvents, or other wastes. During construction, there would be increased human activity and ignition sources, including equipment that could create spark, be a source of heat, or leak flammable materials on the project site. However, all construction equipment is required to have fire suppression equipment (such as a fire extinguisher) on board or at the work site, secondary containment would be required for fuel-powered equipment, and a spill kit would be required to be kept on-site during construction for use in case of any leaks or spills of flammable materials. These existing requirements would reduce the potential exacerbation of wildfire risks related to construction activities.

The operation of the proposed project would be consistent with surrounding uses and allowable zoning for the project site. The project would be required to comply with the Uniform Fire Code (Section 6.04 of the County Ordinance Code) and the Building Code (Title 15), which call for the installation, maintenance, and ongoing inspection of fire protection systems under the direction of the local Fire Chief. In addition, the Uniform Fire Code authorizes the Fire Chief to specify water supply and road design standards. As part of Site Design Review, plan review and approval by the Alameda County Fire District would be required.

The proposed project would also be subject to requirements in Section 13000 et seq. of the California Health and Safety Code, California Building Standards Code, and California State Fire Code, which include regulations concerning the following: building standards for fire protection; fire protection and notification systems such as extinguishers and smoke alarms; safety for firefighters and emergency responders during emergency operations; minimum standards for hazardous vegetation and fuel management, defensible space, and building construction; and minimum standards for emergency access and water supply for fire response.

Compliance with these existing regulatory requirements would ensure that the proposed project would not exacerbate wildfire risks, and thereby expose project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire.

The project does not propose substantial changes that were not previously analyzed in the Eastern Dublin EIR that would require major changes to the Eastern Dublin EIR. Based on the information in the Eastern Dublin EIR and this environmental analysis, with adherence to applicable regulatory requirements, there would be no new impacts related to wildfire risk beyond what has been analyzed in the previous Eastern Dublin EIR, and no other CEQA

standards for supplemental review are met. Therefore, no further environmental review is required.

(c) Require installation or maintenance of infrastructure

No New Impact. As discussed above, a portion of the project site is located within a moderate Fire Hazard Severity Zone within an SRA as mapped by CALFIRE. However, all proposed project components including infrastructure, would be located within the boundaries of the project site and impacts associated with the development of the proposed project within the project site have been analyzed herein. Additionally, through Site Development Review, emergency services would review proposed plans to ensure that emergency vehicle access and circulation is adequate. Therefore, the proposed project would not require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment.

The project does not propose substantial changes that were not previously analyzed in the Eastern Dublin EIR that would require major changes to the Eastern Dublin EIR. Based on the information in the Eastern Dublin EIR and this environmental analysis, with adherence to applicable regulatory requirements, there would be no new impacts related to installation or maintenance of infrastructure beyond what has been analyzed in the previous Eastern Dublin EIR, and no other CEQA standards for supplemental review are met. Therefore, no further environmental review is required.

(d) Exposure to flooding or landslides

No New Impact. Construction of the proposed project would be required to obtain coverage under the National Pollutant Discharge Elimination System (NPDES) General Construction stormwater permit. As discussed in Section 4.10, Hydrology and Water Quality, the proposed project would implement a Stormwater Pollution and Prevention Plan (SWPPP) that specifies Best Management Practices (BMPs) and erosion control measures to be used during construction to manage runoff flows. Additionally, the proposed project would be required to implement Low Impact Development (LID) techniques as required by the Municipal Regional Stormwater NPDES Permit (MRP) and, as detailed in Section 4.10, would not significantly alter drainage patterns compared to existing conditions. Furthermore, the project site is not located within a flood zone or within an area identified as having potential for landslides. Therefore, the proposed project would not have the potential to expose people or structures to downslope or downstream flooding or landslides.

The project does not propose substantial changes that were not previously analyzed in the Eastern Dublin EIR that would require major changes to the Eastern Dublin EIR. Based on the information in the Eastern Dublin EIR and this environmental analysis, with adherence to applicable regulatory requirements, there would be no new impacts related to exposure to downslope or downstream flooding or landslides beyond what has been analyzed in the previous Eastern Dublin EIR, and no other CEQA standards for supplemental review are met. Therefore, no further environmental review is required.

Conclusion

The project does not propose substantial changes that were not previously analyzed in the Eastern Dublin EIR that would require major changes to the Eastern Dublin EIR. Based on the information in the Eastern Dublin EIR and this environmental analysis, with adherence to applicable regulatory requirements and mitigation measures identified in the Eastern Dublin EIR, there would be no new impacts to wildfire beyond what has been analyzed in the previous Eastern Dublin EIR, and no other CEQA standards for supplemental review are met. Therefore, no further environmental review is required.

Mandatory Findings of Significance

ENVIRONMENTAL IMPACTS Issues	Potentially Significant Issues	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No New Impact
18. MANDATORY FINDINGS OF SIGNIFICANCE. Does the project:				
a) Have the potential to degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?				X
b) Have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of the past projects, the effects of other current projects, and the effects of probable future projects.)				X
c) Have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?		X		

Significant Impacts

(a) Degrade quality of environment, reduce habitat, cause population to drop below self-sustaining levels, reduce endangered animals or plants, or eliminate important examples of California history or prehistory.

No New Impact. As discussed, and analyzed in this document, the proposed project would not degrade the quality of the environment. For reasons discussed in Section 4. Biological Resources, the proposed project, would not substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, or reduce the number or restrict the range of a rare or endangered plant or animal, with the implementation of the mitigation measures identified in the Eastern Dublin EIR and adherence to applicable regulatory requirements.

Further, for the reasons discussed in Section 5. Cultural Resources, the proposed project, with implementation of the mitigation identified in the Eastern Dublin EIR, would not eliminate important examples of California history or prehistory.

Implementation of the proposed project, with compliance with regulatory requirements and mitigation measures identified in the Eastern Dublin EIR, would not result in any new impacts or

increase the severity of a previously identified significant impacts to biological or cultural resources as previously analyzed, and no other CEQA standards for supplemental review are met. Therefore, no further environmental review is required for this impact area.

(b) Cumulative Impacts

No New Impact. The proposed project has the potential to result in incremental environmental impacts that are part of a series of approvals that were anticipated under the Eastern Dublin EIR. The Eastern Dublin EIR considered the project's cumulatively considerable impacts where effects had the potential to degrade the quality of the environment as a result of build-out of the EDSP. Implementation of the proposed project, with compliance with regulatory requirements and required mitigation measures, would not result in any new cumulative impacts or increase the severity of a previously identified significant cumulative impact as previously analyzed, and no other CEQA standards for supplemental review are met. Therefore, no further environmental review is required for this impact area.

(c) Substantial Adverse Effects on Human Beings

Less Than Significant with Mitigation Incorporated. As discussed and analyzed in this document, environmental impacts (including those that may have a direct or indirect adverse effect on humans [i.e., air quality, noise]) that are associated with the proposed project can be reduced to less than significant through implementation of mitigation measures identified in the Eastern Dublin EIR or project specific measures recommended in this document to address construction-related pollutant concentrations and vibration (Project-Specific MM AIR-1 and MM NOI-1). Therefore, the proposed project would not result in environmental effects that would cause a substantial adverse effect on human beings either directly or indirectly. Therefore, implementation of the proposed project would not increase the severity of a previously identified significant impact as previously analyzed.

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	16.6	annual days of extreme heat
Extreme Precipitation	3.60	annual days with precipitation above 20 mm
Sea Level Rise	0.00	meters of inundation depth
Wildfire	17.3	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about $\frac{3}{4}$ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider different increments of sea level rise coupled with extreme storm events. Users may select from four model simulations to view the range in potential inundation depth for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 50 meters (m) by 50 m, or about 164 feet (ft) by 164 ft.

Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	1	0	0	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A

Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.

The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	1	1	1	2
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.

The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
-----------	---------------------------------

Exposure Indicators	—
AQ-Ozone	32.1
AQ-PM	17.3
AQ-DPM	18.9
Drinking Water	37.3
Lead Risk Housing	1.17
Pesticides	56.3
Toxic Releases	35.8
Traffic	71.3
Effect Indicators	—
CleanUp Sites	0.00
Groundwater	71.7
Haz Waste Facilities/Generators	58.3
Impaired Water Bodies	23.9
Solid Waste	52.9
Sensitive Population	—
Asthma	28.4
Cardio-vascular	23.8
Low Birth Weights	98.4
Socioeconomic Factor Indicators	—
Education	12.0
Housing	10.8
Linguistic	53.4
Poverty	0.55
Unemployment	9.72

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	96.20171949
Employed	94.72603619
Median HI	98.84511741
Education	—
Bachelor's or higher	85.62812781

2016 Voting	67.5

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	27.0
Healthy Places Index Score for Project Location (b)	98.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	No
Project Located in a Low-Income Community (Assembly Bill 1550)	No
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

b: The maximum Healthy Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

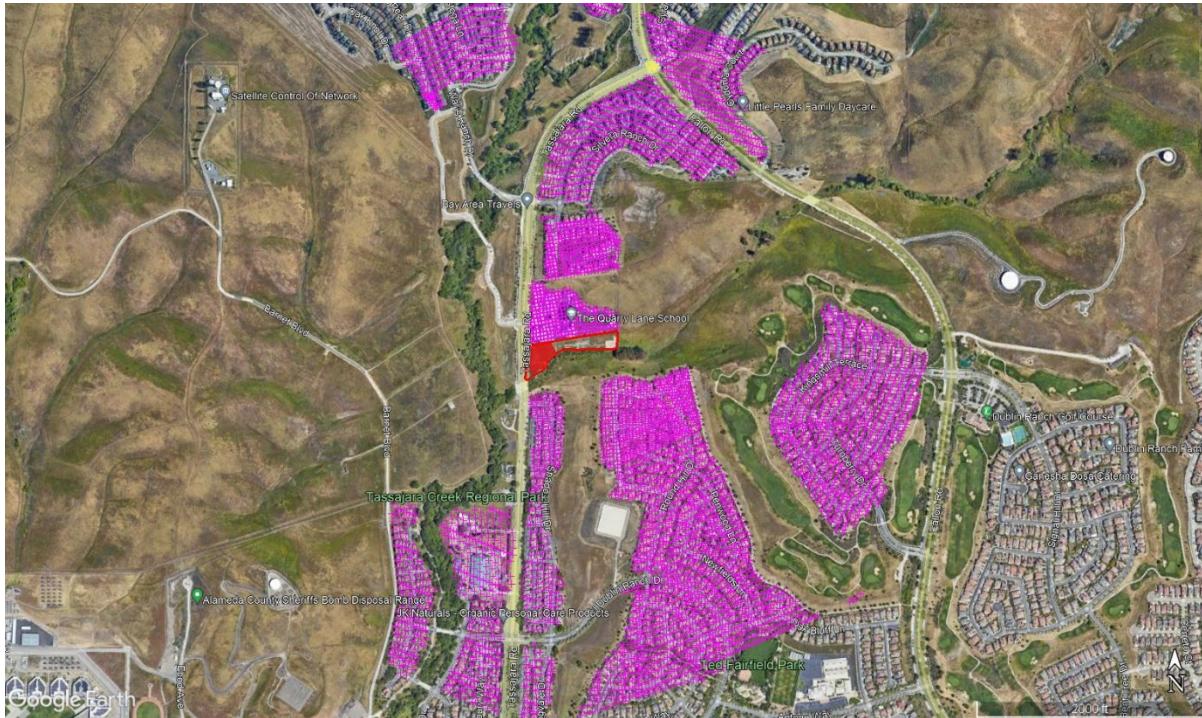

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Construction: Construction Phases	Construction of the proposed project is anticipated to begin in fall of 2023 and be completed by fall of 2024.
Operations: Vehicle Data	The proposed project would not result in a change in trip generation.
Operations: Energy Use	No new natural gas service is permitted beginning in January 2023, so no new natural gas connections would be required.
Construction: Off-Road Equipment	Assuming the use of Tier 2 construction equipment.
